# Annual Status of Education Report (Rural) 2014 

Provisional
January 13, 2015

What would happen if I didn't know how to read? Or do math?

जाम-पुणिमा कुम्यार्य
वर्ग - $\forall I V ' B '$
अणट छम पढ़ने नही जानते बो छम भागा जोड़ गुणा करने नधी सकते
और कईन भी पुरूत्र को नही पढ़ पाते है। औँ हम जब दुकान पर जाते है तो हुकानदार हम कितना पैसा देता है और कितना पैसा लेता है उसे भान नeध जानते है। और पद हम नहार घदते तो कोई भो बात को नर्ध समझ पाते है। और कोटु जमी करनेनी है। भो बात को जान कनी कर पोते है। अगर हों कोई नाम लिखने कहते है तो नही बिख पाते है। आँ अपने मों पिताजा के नाम भी नह काई नात है। इसमे हम कु म्मा नर्ध कर पाते है। और हम अनपड़ि रह

पिर दर में चेपर मीं नही यदे पति है और ताजान त्राजा खबए मीन नही पट़ पाते
 अगय हम नद्थ पढ़े जिख नमी होता हो दूनियों तो अवा इूब ही जाता। इसलिए सभी लोगो को पत्ना लिखना चाहिए।

## Looking back and looking ahead

## Madhav Chavan ${ }^{1}$

This tenth ASER is in a way summary of what we have observed over the tenures of UPA I and II. It is also a baseline for the new government and what it has to deal with.

So, what did happen over the last ten years? The Parliament had unanimously passed the Constitutional amendment to make education a fundamental right under the NDA government. The government changed in 2004 and one of the first steps of the new Prime Minister was to declare imposition of a $2 \%$ cess to raise additional funds for elementary education. Subsequently a non-lapsable Prarambhik Shiksha Kosh was created to ensure that the income from the cess did not get used for anything but elementary education. Sarva Shiksha Abhiyan that had started under NDA was continued with substantial increases in funding every year as the income from the cess grew with increasing wealth in India. Although there were many competing demands from other social sector schemes, the funds available for elementary education increased substantially.

In 2005, when the first ASER survey was conducted, $93.4 \% 6$ to 14 year olds were found to be enrolled in schools. The 2005 ASER also reported that the proportion of Std 4 children who could read a Std 2 text was 47\%.

Looking at those figures it seemed pretty clear to us that improving basic learning achievements in reading, writing, and math was the main big challenge before India. There was no disagreement about improving the quality of learning but the question was how. The education establishment led by NCERT rejected our assessment method and our suggestions for improving basic learning achievement as minimalist. Its own holistic National Curriculum Framework was ready and from here on the Ministry of Human Resource Development left the quality aspects to the NCERT while the administration itself focused its annual work plans on building schools, hiring teachers and creating other facilities. NCF2005 did not go too far beyond creation of textbooks, although it must be admitted they are good. A Reading Cell created within NCERT made no impact on children's reading in any state and year after year ASER kept on reporting that basic learning levels were low. Just when it seemed like the ASER results were getting repetitive, the Right to Education Act was passed (in 2009) and suddenly things began to change. In ASER 2010 we first noticed that the proportion of children in private schools was growing and learning levels had begun to decline. But the Ministry of Human Resource Development officially neither recognized ASER nor did it accept its findings as far as learning levels were concerned. Over the last two years it has been claiming that learning levels have improved marginally although they are low.
Well into the second decade of this century, the Ministry of Human Resource Development did not really take interest in learning achievements. Its sole focus was on provisions, inputs and infrastructure. The thinking seemed implicitly linear; first all infrastructure needs have to be taken care of and then quality issues can be addressed. Unfortunately, in states where infrastructure issues were not severe, there too states followed the MHRD cue and did nothing significant about basic learning levels.

It is quite clear that SSA was really designed to take care of infrastructure and little else. How far did the strategy of focusing on infrastructure succeed in its goals?

On November 24, 2014, Mr. C.P. Narayanan, Member of Parliament, Rajya Sabha, asked a set of questions. The first three out of five were: " (a) whether all the children in the age group of 6 to 14 years in the country are enrolled in schools; (b) how many of them are able to avail free educational facilities extended by Government; (c) whether there are sufficient Government schools in all the States to cater to them ".

The response from the Minister for Human Resource Development is recorded as, "The census 2011 estimated 20.78 crore children in the 6-13 age group. In 2013-14 enrolment in elementary schools was 19.89 crore children in 14.49 lakh elementary schools, including 13.79 lakh government and government aided schools providing free education. " Clearly, the government has avoided answering part (b) specifically and implied that

[^0]children in 13.79 lakh or $95 \%$ of the schools are getting free education. But, it appears that the number 13.79 lakh government and aided schools is incorrect. According to the government's own DISE 2013-14, the number would be 10.94 lakh government schools $+60,000$ aided schools, or about 11.5 lakh schools run or aided by governments.

The correct answer, based on DISE 2013-14, to sub question (b) would be that out of 19.89 crore children enrolled in elementary schools, 12.1 crore were in government schools and 1.1 crore in aided schools. Thus 13.2 crore children receive free education and the remaining approximately 6.7 crore ( $34 \%$ ) children rich or poor pay for their education (of these about 47 lakh go to unrecognized schools).

The private sector is no more just a small group of education providers. According to DISE, 39\% of India's urban and rural children go to private schools (ASER 2014 estimates that $31 \%$ of rural children go to private schools) including government aided schools. If you add to this number, government school children who go to private tutors, especially in the eastern states of India, the proportion of children accessing private schooling or tutoring inputs will rise to just under 50\%.

Many Members of Parliament have been raising questions about schooling and education. The responses from the government often do not present a picture that will make sense in the spirit of the question. Perhaps it is time the government came out with a full statement about what it perceives as the four or five key issues in elementary education and how it expects to address them.

Responding to another question in Lok Sabha on November 26, 2014 from Mr. Kinjarapu Ram Mohan Naidu and others about plans to provide schools, the government said that it has sanctioned 2.04 lakh primary schools and 1.59 lakh upper primary schools around the country since 2002. Published DISE results say that until October 2013, 1.62 lakh primary schools and 77,000 upper primary schools have been built since 2002.

In yet another response to a question by Mr. Rahul Kaswan in the Lok Sabha on July 16, 2014 about learning achievements, the government states: "The reasons for low-level achievement include, inter-alia, the nonavailability of professionally trained teachers and adverse Pupil Teacher Ratios (PTR) at the school level. " How plausible is this explanation? DISE data indicate that between 2006-07 and 2013-14, there was a net increase of 10 lakh government school teachers over and above the previously existing 36 lakh primary and upper primary teachers. So, we have 3.63 lakh new schools sanctioned and 10 lakh new teachers.

So, how adverse is the Pupil Teacher Ratio at this point?
Nationally, DISE reports that PTR has dropped from 36 children per teacher in 2005 to 25 children per teacher in 2013 in primary schools. In upper primary schools, the PTR has dropped from 39 in 2005 to 17 in 2013.

Excepting Bihar and Uttar Pradesh, where PTRs for primary and upper primary are reported to be 38 and 23, and 41 and 34 respectively, every other state has achieved an extremely favorable PTR. The hilly states have one teacher for less than 15 or in some cases 10 children. School by school there may be variations in the pupilteacher ratios. But that is a problem for the administration to solve - to ensure that these teachers are properly distributed across schools.

So in reviewing the evidence, it is clear that the Ministry of Human Resource Development and SSA, and state governments have done rather well in providing key inputs, building infrastructure and hiring teachers. They focused on it and achieved it.

But the paradox of the last ten years is that while governments spent money on building schools and hiring teachers by the lakhs, and also provided free textbooks, uniforms, and mid-day meals, the net enrollment in government schools went down and enrollment in private schools went up sharply, especially in the primary stage. Between 2007 and 2013, according to DISE, total enrollment in primary schools peaked in 2011 at 137 million while the upper primary enrollment has grown from 51 million to about 67 million. During this period enrollment in government schools (Std. 1-8) declined by about 11.7 million, from 133.7 million to 121 million. In contrast, the enrollment in private schools went up by 27 million, from 51 million to 78 million.

There could be several reasons for why parents have been choosing private schools over government schools in spite of free textbooks, uniforms, mid-day meals but the government has certainly contributed to this change in a big way by neglecting to act on poor learning levels.
In 2012 the Planning Commission emphasized learning outcomes and things began to change again. The Ministry of Human Resource Development started talking about learning achievements and NCERT seems to have fallen in line although their reports in the published National Assessment Survey are as opaque as before and only intelligible to experts.

This is the scenario when the new government has taken over. The question again is, what will be the strategy of the new government? The Prime Minister has already declared a goal for toilets in every school. According to ASER 2014, only $6 \%$ government schools do not have toilets but an additional $28.5 \%$ do not have toilets that are usable. $18.8 \%$ Schools do not have girls' toilets and $26 \%$ have girls' toilets that are not usable or were locked. So, meeting this target should be relatively simple given the Prime Minister's national level high profile thrust.

On the learning achievement side, the new government has continued the policy of focus on learning achievements but the problem again is one of the strategy. Will it again have a linear thrust? The Padhe Bharat Badhe Bharat sub-scheme of SSA has set an outcome goal of $85 \%$ children in Std 1 and 2 reaching specified learning indicators in 2016-17. That is two academic years from now. Building the basic foundations well is laudable but what about the older children who have big deficits in basic skills? Is there a good reason why basic learning achievements should not be stressed at higher standards simultaneously?

Currently, in most states, teachers who teach Std 3 to 8 have no clearly stated or focused learning goals to achieve except completing the syllabus. The Right to Education Act, if anyone wants to take it seriously, says it is the duty of the teachers to assess each child's learning ability and provide additional instruction as required. It also says that an out of school child who is enrolled directly to her age-appropriate grade has a right to special training to be "on par" with other children in the class. The assumption in writing the law was that all children in school have achieved grade level abilities and that out of school children joining these classes will have to catch up. The problem is that the grade-level capabilities are not defined in a measurable way and it is obvious looking at ASER or even NAS results that all children are not at the same level. In fact they are well below what would be expected of them. The government has admitted several times that learning levels are low but there is no measure of how low compared to any set standard. But the idea is quite clear: that those who lag behind have a right to be helped to catch up.

Is it the Ministry's view that the children in higher grades can read and comprehend what they read? The humiliation of Himachal and Tamil Nadu standing 72nd and 73rd in PISA among 74 participants, higher only than Kyrgyzstan cannot be forgotten no matter what excuses NCERT came up with.

We live in a country that has achieved near universal enrollment, built enough schools, and has appointed teachers and academic support staff. In the same country, we have children in higher grades who cannot read well and cannot comprehend what they read. It is also clearly visible that a large proportion of children are leaving government schools and seeking other options including supplemental help over and above school. It is incomprehensible why governments (past and perhaps the present too) have been unwilling to tackle this learning crisis head on?

Remedial learning is something Indian education experts have frowned on. In the meanwhile, a hundred million children have gone through the schools in the last decade without basic reading and math skills. The experts were busy working out holistic ideals with not a clue about how to get them on the ground. The Government of India, under the influence of these experts, took a long time to move to a learning outcomes orientation and stopped well short of what is urgently needed.

It is time to cover the huge backlog in basic skills created by the neglect of at least the last decade. Pratham's experience is that children in Std 3 or higher can learn to read with proficiency and learn the basics of arithmetic quite quickly. Continuing with reading, writing, thinking, speaking exercises focused on deeper comprehension leads to enhanced levels of confidence and understanding. This helps a child to reach a threshold beyond which she can be a more independent learner, less dependent on the teacher. Or, it may be said that the 'chalk and talk' methods can then give way to better teacher-student interactions. A strategy for acceleration of pace in improving learning outcomes across schooling years is urgently needed.

Ground level evidence shows that the achievement of high levels of reading and math proficiency in Indian schools is not something that should take decades. If we simplify matters and focus on the key areas to build a platform for higher learning, it can be achieved in less than five years within the limits of current human and financial capacities.

The Padhe Bharat Badhe Bharat initiative to create a base for reading, writing, and math fluency is a good step. However, it is yet to be seen if it will succeed as envisaged. Pick up is quite slow. Given the achievement in hiring teachers and creating infrastructure over the last decade, the Government of India and the state governments are still moving at the old pace of business as usual. Now acceleration is not only possible but also critically necessary.

The child population in India has started to decline and the demography will change dramatically over the next twenty years. Unfortunately, the predominant thinking about India's economic advance has been and continues to be centered on the investment of financial capital. That limitations of human capital at the base of the pyramid could be big hurdle in India's economic advancement is not expressed or felt strongly, either in industry or among policymakers. Perhaps 50\% of India going to private schools will provide enough human capital for the economic engine. Where is the urgency to get the rest better educated to meet the challenges of the future?

As we complete ten years of ASER, the Government of India deserves to be congratulated on its achievements in infrastructure over the last decade. The expansion of infrastructure and facilities has led to larger numbers of children transitioning to the upper primary stage and beyond. But its neglect of learning outcomes has definitely contributed to a growing divide in every village and community between those who access private schools or tutors, and those who do not. Further neglect and slow pace of change will be more disastrous educationally, socially, and politically.

# Turning a condition into a problem: ASER's successful first ten years 

Lant Pritchett ${ }^{1}$

In the late 1960s a political scientist, Matthew Crenson, went to Gary Indiana to study the workings of municipal government. One characteristic of Gary Indiana at the time was that it stank, badly, and the air pollution was terrible. As the location of a major US Steel plant the whole city smelled of sulfur and on bad days the air was visibly thick with particulates. Yet in his year-long study of the operation of local government - attending meetings, interviewing officials, examining agendas - the fact that the city had terrible air and stank badly just never once happened to come up. His book on this research was sub-titled "The Politics of Non-Decision Making."

The myth is that the policy making process consists of a group of people called "policy makers" (both politically elected and appointed officials and top administrative officers) who make decisions involving choosing among alternatives to address problems. In this formulation, influencing policy for the better consists of providing policy makers with better information about alternatives, such as providing evidence (perhaps even "rigorous" evidence) that this program or policy design provides "more bang for the buck" than the other. But this narrative, while charming, misses the main point: what is on the policy making agenda as a problem - and how that problem is constructed - have their own dynamics that may determine outcomes much more than "choices among alternatives."

How does one turn a fact into a policy problem? There are three steps, all illustrated in the case of ASER and learning outcomes in Indian schools.

First, one has to establish what the factual conditions really are in a way that can create a concrete and specific discourse about a problem that can be communicated to create a common formulation. Before ASER people might have asserted that learning wasn't good in Indian schools, but the framing of the issue wasn't concrete or specific (in which of many possible ways wasn't it good?) and hence could not lead to sustained communication. So, once every few years the government released (or didn't) a report on learning, or some academic or NGO would release a study (e.g. the PROBE report), but there was no sustained communication about learning results around which coalitions for action could build.

This first step is not easy as often powerful players - in particularly the existing providers of public schooling - had no interest in there being a commonly accepted set of facts about learning quality. And particularly they had no interest in losing control over the establishment and framing of those facts. But now, ten years into ASER, there is a massive body of assessments that have definitively broken the monopoly over the measurement of learning that the GOI attempted to maintain. Obviously the ASER itself, carried out at massive scale (over half a million children each year), at a district level of representation (not to be dismissed as not relevant India-wide), and repeated year after year after year convinced all who were convincible that mastery of basic reading and arithmetic skills was not only not universal among school goers, but often not even widespread. This has been supplemented by the use of the ASER instrument by others as in the India Human Development Survey; by the

[^1]more psychometrically sophisticated tools at grades 4, 6 and 8 in the Education Initiatives study across 18 states; by the participation of the states of Himachal Pradesh and Tamil Nadu in the PISA study; by large scale longitudinal studies in Andhra Pradesh. All of these, with different instruments and angles, tell a similar factual story of a learning crisis in India.

As with the example of Gary Indiana, it does not suffice that the facts about a condition be widely accepted, one still has to turn a "condition" into a "problem." In a country like India, with its limited economic, political and administrative resources there are many negative factual conditions that do not get onto the policy agenda as problems. Even once there is consensus on the facts, there are two more steps.

The next step is to convince people that the condition is not inevitable, that it is a fact but not a "fact of life." A condition can only become a problem if there is an idea of a solution (but importantly, not vice versa, having a solution is not sufficient to create a problem). As the old joke goes: "Everyone talks about the weather but no one does anything about it." No one did anything about it because there was nothing you could do. As the advocates of climate change have shown, one can turn even the weather into something people frame not as a condition but as a problem - something one can do something about.

Many have attempted to prevent the condition of low learning in Indian schools from becoming a problem by denying there was anything that could be done about it. This often took the very popular tack of blaming the victims by asserting that various types of children were just "uneducable." The fact that India had "first generation learners" or that India was just a "poor country" or that parents weren't interested in education became excuses to accept the fact that learning outcomes stank without that condition becoming a policy problem.

Finally, perhaps the hardest part of putting and keeping a problem on the policy agenda is to prevent the displacement of a real outcome-oriented solution by a set of "solutions" of the type government bureaucracies love - more inputs. Once low learning is accepted as a factual condition and it becomes a problem that people are willing to attempt to address, the tendency is to quickly turn the problem into a neatly implementable package of pre-cooked "solutions" and make the problem the lack of the solution. With that "problem into lack of solution" sleight of hand accomplished, policy makers can go back into implementation mode.

This is obviously the challenge facing India today. The education bureaucracy, and some parts of the education movement, want the lack of identifiable, easily quantifiable, bureaucratically controllable inputs to be way in which the problem of education is framed. The whole education information system that has been mounted, the District Information System for Education, which the official bureaucracy is happy to label the "Report Card" on schools is a perfect example. The "report card" for each state has 817 pieces of information - and not one of them, not one, is about learning. Under the section "Performance Indicators" the DISE Report Card provides data like percent of schools with a boundary wall, percent with a kitchen shed. While these might be related to learning performance of students they are not the same as learning, and goals for meeting infrastructure targets are not goals for reaching learning targets. The Right to Education legislation doesn't in fact provide the right to education at all. It provides the right to attend a school. Whether that school actually provides an education that apparently is not how some advocates want the problem framed. They want to define a "quality" school as one with a set of inputs and that is that.

The challenge of the next ten years of ASER is clear: keep everyone's eyes on the prize of improving learning outcomes for India's children.

# Bringing the education administration back in to the classroom 

#### Abstract

Yamini Aiyar ${ }^{1}$ In the last year, Accountability Initiative's crew of researchers has interviewed over 60 local education administrators in Bihar (district, block, cluster and school officials in charge of actual implementation) to capture their perspectives on the constraints to children's learning in elementary schools. Administrators viewed the challenge of learning primarily as a consequence of circumstances outside their control. These included poor policy - the Right to Education's no detention policy was frequently cited; poor administration from above - dual pay scales for teachers, poor allocation of tasks that took time away from teaching and the mid day meal were common reasons that took away attention from quality teaching in schools; parents who had little interest in what their children did in school; and students who rarely attended schools. ${ }^{2}$

And expectedly, the solutions to this challenge too lay outside of the administrator's domain of influence. "Agar sarkar chahe to bahut kuch ho sakta hai" sums up how most administrators viewed the learning problem. ${ }^{3}$ As we pressed on with our interviews, we discovered that most local level administrators viewed themselves as mere cogs in a wheel over which they had no control. In fact when pushed, most interviewees referred to themselves as "post officers" and "reporting machines" with little role to play in decision-making. As one block official said, "Humari awaaz kaun sunta hai". No surprise then that education administrators consider the solution to the greatest challenge that they face every day when they get to work as something they can do precious little about. And, this is not a problem unique to Bihar. As we discovered when conducting similar interviews in other states, education administrators across the country have a similar perspective.

How does such an atmosphere prevail? In a recently completed paper with my co-author Shrayana Bhattacharya, I explore this question through what we have described as the "post office phenomenon" among block education officers (BEO). ${ }^{4}$ Our analysis is based on a time-use study and a series of interviews that we conducted between December 2012 and May 2013 with block education officers in one block each in Andhra Pradesh, Himachal Pradesh, Maharashtra and Bihar.

By design, the BEO is expected to manage multiple tasks from monitoring compliance, to managing human resources, providing academic support to schools and engaging the community in school related functions. Unsurprisingly therefore, given the range of activities expected, the block is a place of frenzied activity. BEOs spend much of their day in routine tasks - visiting schools, attending meetings, completing paper work and dealing with visitors.

Seems reasonable? Except that these daily tasks are rarely planned. BEOs usually start their day with phone calls from their district bosses informing them of new "government orders" received and the tasks they have to perform. As a result each day is spent executing unplanned tasks rather than fulfilling the tasks they were hired for. During our study, Bihar's BEOs were busy implementing orders to organize camps for uniform and scholarship distribution. In Himachal Pradesh, BEOs were busy managing exams while Andhra Pradesh's BEOs were implementing teacher recruitment orders. During this time, none of the officers found any time to respond to reports received or needs expressed by those who visited the blocks. In fact, it was common for HMs and village elders who visited the block officers to raise concerns about their schools to be asked to wait while BEOs completed their district specified tasks.

In responding to these orders, the entire block office appeared to be geared toward implementing schemes rather than responding to the needs of the school. In fact "learning" related activities found almost no place in the daily activities of the block office for the time period of this study. And BEOs appear to have shaped their roles as being mere rule followers and data gatherers rather than active agents of administration. In other words, they are no more than "post officers". In 2014, Accountability Initiative's researcher started a similar exercise

[^2]with cluster resource officers and headmasters in Bihar. Preliminary results suggest a very similar pattern in their time use. No surprise, then, that local administrators consider the learning challenge as something that can be resolved only if someone other than themselves takes action.

In our analysis, Bhattacharya and I trace the persistence of this "post officer" syndrome to the organizational design of the education administration, which has served to entrench a culture where hierarchy dominates understandings of performance. This in turn further entrenches a sense of powerlessness and apathy within the local administration.

To explain, as the PAISA surveys have repeatedly highlighted, decision-making systems within the education system are concentrated within the higher levels of the administration leaving local level administrators little by way of actual authority. This creates a sense of powerlessness amongst officers. As one interviewee said, "The Prabhari or HM comes here and I have no answer on what has happened to their request or problem. I have to send them to the district office or ask them to wait till I hear anything. I feel bad. I have no power to give them anything, but I don't know what happened to their case either". The hierarchical culture that this top-down decision-making system creates also ensures that higher levels of authority rarely provide block officers with information on progress over decisions and feedback on information provided by them. Nor do they consult lower authorities when allocating tasks. Thus local officers rarely fully comprehend the reasons why they are expected to perform tasks and inevitably reduce even the most complex of tasks to rules and orders received. For instance, when block officials were asked to describe their role vis-a-vis school committees, most described their role as that of communicating new rules and guidelines to HMs. Ensuring that committees function in a manner that enables effective parental engagement with the school is simply not on their agenda.

In this hierarchical, order driven work culture, officials understand "performance" entirely on the basis of responsiveness to orders rather than responding to school level needs. As one respondent in Bihar said "As long as you keep sending data and as many forms as possible, you are a good worker here". Mandal level staff in Andhra Pradesh agreed. "Our job is focused on filing performa well, we honestly don't know what happens after we collect this information".

Consequently, the entire local bureaucracy waits for orders to be received and as for the rest, they view their jobs, in the words of a cluster resource center coordinator, as "complete rest in comfortable conditions". After all, why work when the system doesn't demand it! And in this world, focusing on school needs and identifying solutions to the learning problem is simply not something that local administrators can do.

Those skeptical of an average administrator's intent to do their job would suggest that such claims of apathy and powerlessness are an excuse - yet another strategy to shirk effort and responsibility. Those sympathetic to the burdens of last mile work conditions would suggest that we are witnessing how hierarchical organizations predicated on rule-following norms stimulate and sustain an atmosphere of administrative apathy, thereby legitimizing unresponsiveness on the part of the administration. Irrespective, as Bhattacharya and I argue, it is our contention that effective governance is incumbent on the extent to which training and management of local state administration tackles how administrative line agents understand their roles and make meaning of their own identity as block "officers". And any effort at implementing policy aimed at improving learning must necessarily confront this everyday reality of India's local education administration.

As the policy debate on improving learning outcomes in India gathers pace, the issue of the how the local administration is organized, motivated and incentivized to do its job is going to matter significantly. Back in 2005, when ASER first made headlines, the challenge was to push India's education policy toward acknowledging the problem of outcome failures. This has changed. The 12th Five Year Plan adopted in December 2012 and recent policy documents of the Ministry of Human Resource Development recognize the outcomes problem and explicitly articulate learning improvements as the stated goal for education policy. Between 2013 and 2014 many state governments introduced experimental programs aimed at improving learning in schools. The government of India too launched the nationwide quality focused Padhe Bharat Badhe Bharat in 2014 along with a number of state level learning assessment programs. But for all of these efforts to be sustained and scaled up, they need to be embedded in the day-to-day functioning of the local administration - after all, it is these administrators who ultimately implement reforms. India's learning challenge is as much a challenge of governance as it is of pedagogy. We need to bring governance back into the debate and ensure that every education administrator is incentivized to place her gaze firmly within the four walls of the classroom.

Ten years ago, an ambitious and audacious idea was floated - why not have a people's audit of government expenditure on education and produce a report for the common man? In a conversation shortly after the 2\% Education Cess was introduced in 2004, I recall Madhav (Chavan, co-founder and CEO of Pratham) first proposing the concept, arguing that the people had a right to know where the Cess was being spent, and how effective it really was. At the time, I was with the Ministry of Human Resource Development (MHRD) and grappling with the concept of the Prarambhik Shiksha Kosh (PSK), a non-lapsable fund we were trying to convince the Finance Ministry to create, in order to ensure that Cess revenues remained with MHRD to support elementary education. In that context, Madhav's idea seemed like a good one, but I had no inkling then of the scale at which he was proposing to execute it.
When it was finally carried out, the Annual Status of Education Report (ASER) 2005 covered some 490 districts and 3.3 lakh children, who were tested by volunteers from all walks of life, at home, in school, on the streets and in the fields, and just about everywhere in between. Today the scale and scope of the reports have widened significantly, but for a first time exercise, it was bold and unparalleled in scale; quite simply, nobody had ever attempted anything like it before. Most striking of all was its intent, captured by the "Preamble" to the report. "We, people of India, from different states and regions, speaking different languages, sat with our children and looked within, inside our homes, at our villages, into our schools, and prepared this report for ourselves, to build a better India". ${ }^{2}$ This was what set ASER apart from donor-funded or government surveys - it was a report of the people, by the people, for the people.
In 2004, Sarva Shiksha Abhiyan (SSA), the government's programme for universalising elementary education, was in its third year of implementation. Our concerns in MHRD at the time were primarily around provisioning and ensuring that all children were enrolled in school, in order to meet the first goal of the programme, viz., all children in school/EGS centre/bridge course by 2003. It was already evident that the 2003 enrolment milestone had not been met, and all our efforts were thus concentrated on catching up. When the findings of ASER 2005 were shared with us, some days before the formal release of the report, it was heartening to learn that the survey had estimated that just over $93 \%$ children of the appropriate age group were enrolled in school; this accorded well with the data being reported by the states, and seemed to indicate that SSA was having a successful impact on the ground.
The focus of most of the debate after ASER 2005 was more on the national enrolment figures; learning levels had also been tested, and the results did not fully match either popular perception, or the available NCERT data. Later reports, treating the question of enrolment as more or less settled, have emphasised learning levels of children, testing among other things, to see where they stand, and exploring the differences, if any, between public and private schools. These reports have also examined the availability of facilities in schools vis-à-vis those mandated by the Right to Education Act, and collected some basic economic information about households, such as possession of mobiles and TVs, etc.
The numbers coming out of the ASER 2005 survey also validated the results of another study commissioned by government and carried out by IMRB. ${ }^{3}$ The latter study estimated that some 1.34 crore or $6.94 \%$ children were then out of school, which approximated the ASER estimates of 1.4 crore or $6.6 \%$. The importance of the ASER results lay of course, in the fact that unlike the IMRB exercise which had been funded by government, they were an independent and non-partisan estimation. While the IMRB report could conceivably be questioned as a "government statistic", the results of ASER were not so easily open to multiple interpretations. Both the IMRB report and ASER 2005 were used extensively by government to provide evidence of the impact and effectiveness of its universalisation programme, at least in terms of improved enrolment figures.
While the enrolment data emerging from ASER has generally been viewed as encouraging, this has not always been the case with figures related to learning. NCERT and several state governments disputed many of the findings, questioning both the methodology and the process adopted to determine learning outcomes. In some cases, the hostility extended to actively banning Pratham from working with their schools, a challenge the latter overcame by working directly with village communities instead.

[^3]Somewhere around the fifth ASER report, a suggestion was made that perhaps there should be fewer reports; possibly one report every 2-3 years instead of a regular annual publication. Many others who work in this sector no doubt shared my relief that this was one suggestion Pratham did not accept. An annual ASER exercise and report have now become an integral part of the education landscape, serving to educate and inform stakeholders in the system and the public at large.
What impact has ASER had on the Indian education environment? First, just the introduction of the concept of a "people's audit of education" was a game changer in itself; the People's Report on Basic Education (PROBE) was a one-off exercise and had not, at the time, been repeated, nor was it anything like ASER in its scope. ASER reports have regularly held up a mirror to society, informing us of how much (or how little) our children have gained in terms of improved education levels, access to better schooling, and removal of inequities. Note that its original purpose has not changed - ASER is still aimed at anyone who has an interest in education, not just policy makers or academics or other standard stakeholders in the system.
Second, the single most significant finding of ASER year after year has been the fact that learning levels across the country, whether in public or private school, have not improved. Clearly, even after spending crores of rupees on delivering a Right to Education, our efforts have not succeeded as well as they should have; the policy prescription for shifting attention away from inputs to outcomes could not be clearer.
Third, and directly as a result of the above finding, ASER has succeeded in bringing the issue of learning centrestage; from a focus on ensuring that children are enrolled in school and that adequate infrastructural and teaching facilities are provided to them, the debate has now moved to a place where inputs are assumed, but the interest is in outcomes. For the first time, the 12th Five Year Plan acknowledged that "there is a need for a clear shift in strategy from a focus on inputs and increasing access and enrolment to teaching learning process and its improvement in order to ensure adequate appropriate learning outcomes", ${ }^{4}$ explicitly agreeing that a more-of-the-same approach focused only on provisioning will not necessarily work. While there will always be discussion around methodological approaches and whether ASER follows this or that method as opposed to others, the fact is that successive ASER reports have compelled us all to sit up and take notice of what is really happening inside schools.
Additionally, ASER has pushed both the central and state governments into commissioning their own assessments and analyses of the status of education in their schools, often in a move to defend policy and/or practice. In many cases, these assessments do not produce the same results as ASER, partly since they are not comparable in terms of what is measured and who is covered, and there is often much controversy and hand wringing over the discrepancies. Yet it is a moot point if such assessments would today be considered so essential if public perception had not been influenced so profoundly by ASER.
Fourth, ASER has been successful in highlighting an important trend in school enrolment - from only 16\% children enrolled in private schools when ASER 2005 was carried out, the percentage has increased to nearly $30 \%$ in the last report. Present trends seem to indicate that this number will increase to $50 \%$ by the end of the current decade. Given that this increase has taken place in rural areas, where much of the money spent on SSA and other programmes has been concentrated, this is not an encouraging development, and is one that merits serious reflection on the part of policy makers.
What should one now expect after a decade of this exercise? Ideally, the annual reports should continue to raise the uncomfortable questions that they do today. Perhaps there is now a case for a somewhat more sophisticated analysis of learning; not necessarily one that substitutes for say, a PISA or TIMSS, but one that develops a more rigorous indigenous model of assessment, feeding even more closely into policy making and thus potentially making a difference to learning in schools. For there is no doubt that unless we get this piece right, any illusions of benefiting from a "demographic dividend" in the future are unlikely to be realised.
Personally, I would also like to see greater dissemination of the results of the report, not just at the time of its release, but continuously through the year. Pratham and ASER Centre have of course, been disseminating the results at district and State levels all these years, but what we need in this country is a continuous and sustained debate about the education of our children. Data from ASER is used regularly by the media to illustrate their reports; perhaps the next question to ask could be around ways to deepen this engagement in order to keep a discussion going.
Whatever direction the report takes in the coming years, ASER can rightly claim the credit for having changed, over the course of the last decade, the manner in which school education is discussed and understood in India; for that one achievement alone, Pratham deserves our thanks.

[^4]
## Ten years of ASER

M R Madhavan ${ }^{1}$

I am happy to see that ASER has completed the tenth consecutive year of its annual survey. ASER has made a great contribution to the discussions on our primary education policy. It has been successful, at least to some extent, in shifting the policy discourse from measuring inputs to asking for outcomes. Indeed, the fact that even in Parliament, over a dozen questions were asked about learning levels, testifies to the impact of these surveys.

It may be a bit disheartening to see the survey results every year and find that there is little improvement in learning levels among school children in India. On a few parameters, these surveys show that the overall learning levels have deteriorated over the years. This has happened despite a significant increase in government expenditure on school education and the enactment of the Right to Education Act.

However, it is in such a situation that a survey such as ASER is valuable. It shifts the focus from measuring how much the government is spending on education to whether children are learning. It also highlights the need to look at learning outcomes and not just at input norms such as availability of classrooms, teachers etc. After all, these inputs are means to an end, and unless we measure the desired outcome, we do not know the impact of the process being used.

The ASER survey also points out some fundamental problems with our public discourse. We have seen vigorous debate in the media on the curriculum in school text books. Recently, there was a debate related to whether the third language to be learnt can be a foreign language such as German. All these debates seem irrelevant when one finds that half the children in the fifth standard cannot read a simple story. It appears absurd to discuss the contents of text books if children are unable to acquire the basic skills to read them. And the third language debate is surreal if they cannot read even one language. The ability to read is the foundation on which all education rests. If this foundation does not exist, there is no point in debating the content and structure of the curriculum. The story is even bleaker when it comes to numerical skills. The ASER surveys tell us that threefourths of all children in the fifth standard cannot do simple division.

If India has to reap its demographic dividend and grow out of poverty, it has to enable its next generation to pick up the requisite skills to work in a globalising economy. This cannot happen unless they have the basic ability to read, write and do arithmetic. The ASER surveys tell us that we have a long way to go in these areas, and that our education policy has to first focus on bridging this gap. That there is hardly any improvement on these indicators over the last decade is a pointer to how misplaced our elementary education policy continues to be.

I do not know how difficult it is to bridge this gap. Pratham says that its Read India campaign can do this work for Rs 30,000 per year per village. Given that there are about six lakh villages in the country, the total cost according to this estimate is about Rs 2,000 crore. Even if this estimate is off by a factor of 10, availability of public funding does not appear to be the constraint as Rs 20,000 crore is less than $0.2 \%$ of GDP. Currently, we spend over Rs 1 lakh crore per year of public funds on primary education every year, so it should not be too difficult to restructure these funds or to augment the amount to ensure that the basic skills are built. So where does the problem lie? My guess is that there is limited appreciation of the problem within the government and the urgency needed to address this.

A quick look at the answers given to parliamentary questions over the last couple of years - by both the previous government and the current one - reveals the attitude of the government towards this issue. While the previous government dismissed the ASER reports as "cursory assessments", the current government has called it "a study without a robust methodology". Talk about ostriches and sand.

This brings me to what I think ASER should do in the years ahead. I believe that the work has been well begun but is by no means complete. While it is important to continue to measure the progress of learning levels, it is equally important to have a greater level of public discussion on the topic. This can be done only through a

[^5]vigorous campaign of dissemination of the results coupled with discussions on its importance and ways to fix the problem.

While the ASER survey measures outcomes in basic education, we need outcome based evaluation of many other social welfare parameters. For example, the government has launched the Swachh Bharat Abhiyan, which includes a campaign to build more toilets. The outcome desired is to reduce open defecation, which is a key element towards improving health and nutrition indicators. Building toilets is a necessary but not sufficient condition; increasing usage of toilets may involve several other variables including availability of water and solid waste disposal, cultural and social factors etc. The final outcome, that of percentage of people who defecate in the open, needs to be tracked in order to evaluate progress in the scheme. One can think of similar outcome parameters across a range of areas (incidence of disease rather than vaccination coverage, crop yield rather than fertiliser use etc.) that should supplement the current measurement of outlays and outputs.

One hopes that the government starts measuring outcomes on a regular basis. It does conduct surveys such as those done by the National Sample Survey Organisation (NSSO) and the National Family Health Survey (NFHS) which measure outcomes. However, most of these surveys are not conducted on an annual basis; for example, the last NFHS was for 2005-06, and the next one is for 2014-15. Even data on unemployment or poverty rates is collected by NSSO only once every five years. We need data at more frequent intervals to assess the effectiveness of various policy measures.

In the absence of the government system responding to this need, civil society groups could act as an independent audit system for the effectiveness of government programmes. Large scale surveys on various outcome parameters could help bring focus on the progress and effectiveness of various interventions. ASER has built the skills needed to conduct these surveys and could perhaps, help other groups conduct surveys in other sectors.

I shall conclude with expressing my deep admiration for the work done by ASER. I would urge them to continue to expand their work, both in terms of creating greater public awareness on education outcomes and in creating (or supporting) outcome surveys on other social and economic areas.

## Can we fix the persisting crisis of learning?

Vimala Ramachandran ${ }^{1}$

It is hard to believe that this is the tenth cycle of learning assessments done by Pratham and ASER, and even harder to believe that not much has changed on the ground. The government continues to count inputs and put out numbers of children enrolled in school and completing school, and argue that a lot has changed in Indian schools. Yet, year after year in mid-January there is a wake up call. There have been many more alarm bells assessments done by NCERT, Educational Initiatives and several smaller studies tell us that our children are not learning. The nagging question is: why is it so difficult to ensure that our children learn?

I was recently part of two studies - one on inclusion and exclusion in schools and classrooms, the other a national study on the working conditions of school teachers. We met with teachers and administrators. We observed schools and classrooms over a one-week period. In most states I asked teachers and teacher union leaders why our children are not learning. I also asked them how many teachers send their own children or grand children to government schools. There was a sense of denial - most teachers and administrators did not agree that children are not learning. But almost all of them said they sent their own children to private schools because they believed that their children would get "better" education there. They had little faith in government schools and the reasons they cited ranged from English medium to excessive non-teaching duties of government school teachers. In a few states teachers said that all kinds of children enrol in government schools to avail of incentives and mid-day meals. A few of them admitted that the classroom is so diverse that it is difficult for teachers to teach so many levels at the same time. The discussion went round in circles and neither the teachers nor administrators and researchers could identify the reasons for poor learning, or what can be done to turn the system around and make it accountable for learning.

This has led to a sense of disquiet, a feeling of helplessness that is all pervading. It is like a group of blind people trying to describe an elephant by touching different parts of the body. Here are some of the issues that were identified:

One, our system expects teachers to teach to the curriculum, finish the syllabus within a time frame - regardless of whether the children in the class are learning or not. Teachers are not able to address the learning needs of every child - as a result they throw up their hands and teach those who are able to keep pace. Two other issues contribute to this - prevalence of multi-grade classrooms across the country and frequent absence of teachers and students. As a result the majority of children fall behind - and become passive spectators in the classroom. As time goes by the cumulative burden of non-learning just accumulates till the children reach a point where they are just unable to comprehend what is going on in class.

Two, there is no school level monitoring of teaching-learning processes and actual teaching time. Almost all the monitoring is confined to inputs - enrolment, mid-day meals, distribution of incentives and so on. Institutions created to provide on-site school level academic support have become data gathering instruments. These institutions are also staffed with people who may not have the skills or the aptitude for on-site teacher capacity building. Post RTE mechanisms like Continuous and Comprehensive Evaluation (CCE) have been reduced to a series of formats that teachers are expected to fill out. In one state I asked the teachers about CCE and several of them said that they just fill out the forms without actually conducting the activities with children. Administrators admit that they follow instructions from above and that they are not educators who can develop systems that can monitor children's learning. They need help and that too hands-on help to develop an effective monitoring system.

Three, there is a huge social distance between teachers and students in government schools. In the last few decades the middle classes and the not-so-poor have walked out of government schools and prefer to send their children to private schools. Those left behind are poor, migrant wage labourers; the most marginalised social groups and girls from the not-so-poor families. The inclusion / exclusion study that we did clearly brought out the innate prejudices and stereotypes that teachers carry with them into the school. Many of them actually believe that some children cannot learn or that they are not motivated to learn. They blame the family and the community. Most importantly, teachers complain that parents are not able to help their children with their studies. I must hasten to add that the situation in the majority of the low cost private schools may not be very different when it

[^6]comes to learning. Yet, there is a perception among government school teachers that their wards and parents do not value education and learning.

Four, educators and pedagogy experts blame rote learning - the practice of memorising information. There is a large body of people in the education field who squarely blame our system of teaching and learning and believe that a more child-centric and experiential learning process could reverse the trend. Several states, starting with Karnataka and Tamil Nadu introduced Activity Based Learning - a method that was pioneered by Rishi Valley Education Centre. While there is considerable evidence showing that this has definitely energised classrooms and enabled children to learn at their own pace, there is still little evidence to show that this has indeed improved learning when the ABL method is adopted on a large scale.

Five, in the wake of Teacher Eligibility Tests (introduced after RTE) and the high proportion of candidates who fail to clear the examination - there are people who argue that subject knowledge is poor among our teachers. They point out that it is the quality of teacher - her/his mastery over subjects, pedagogic skills and aptitude to teach that is perhaps responsible for poor learning. Many of them argue that people enter the teaching profession as a last resort - when they have no other option. They point to the Polish educational reform process and argue that the single most important factor is teacher knowledge and aptitude. However, others argue that teacher salaries have gone up since the fifth and sixth pay commission and it is wrong to say that the teaching profession is less prestigious in terms of salary and working conditions. These people believe that over time more qualified people will enter the profession and that the TET has already made a difference.

Six, there is yet another group of experts who believe that the no-detention policy that ensures children are promoted from one grade to the next is the reason why the school system is not made accountable for the learning of children. Coupled with age-appropriate enrolment, the very essence of schooling is negated when children are pushed up without any guarantee of learning. They argue that the Right to Education is not limited to the right to be enrolled, but to be taught and to learn.

Seven, educational researchers point out that the number of actual teaching days is low and that teachers have many non-teaching duties. Effectively the time a child spends in actual teaching-learning activity is low. Despite a clear policy since 1965 to facilitate sub-region specific school calendar and timings, teachers unions have stalled any move to introduce localised time planning.

Many other problems - big and small - are cited. Some are to do with teachers, others with the supervisory and monitoring systems and still more are about parents and children. The fact is that we, as a society, as an education community and as administrators have become numb and insensitive to the all-pervading learning crisis. There are so many factors that have contributed to this crisis and we really do not know where to start reforming the education system. Surveys like ASER have forced us to confront the problem and acknowledge its seriousness. However, surveys and research studies have not shaken our administrators enough to sit down and see what can be done to overhaul the education system.

Where does one start?
It is time that a diverse group of people - including political leaders and administrators - come together to brainstorm and develop a roadmap for systemic reform. It can be done - provided there is political will, administrative readiness and social pressure. The quality of education is essentially about learning. It is not about brick and mortar or about toilets and water. Infrastructure is perhaps easiest to fix - what is proving difficult is the daily process of teaching and learning, the everyday practice of teachers in the classroom and the cumbersome process of striking a balance between monitoring and support.

Can ASER initiate a nation-wide dialogue? Is this the next big challenge it can address in the coming ten years?

## The "ASER" of public finance

## Anit Mukherjee ${ }^{1}$

It was a hot, humid morning in Kishanganj as the sun rose over the rice fields in the first week of June of 2008. It was my first visit to north Bihar to see firsthand the Read India campaign conducted on a statewide scale by Pratham. The choice of location was deliberate: as per the ASER Report that year, Kishanganj and Araria, the neighbouring district, were at the bottom of the pile as far as reading and math scores of children in the state were concerned. Something was very wrong in the way the public education system was functioning, and I wanted to understand what it might be.

As a researcher in public finance, my work focused on the system of allocation and expenditure of government funds for Sarva Shiksha Abhiyan, the universal elementary education program in India. I was intrigued by the fact that a state like Bihar was receiving more money for elementary education than it ever got in the past, yet the learning levels of children were abysmally low. New schools were being built, classrooms were being added to existing ones, teachers were being appointed, programs for out-of-school children were being rolled out across the state, but the children were not learning. It seemed very far from the conventional wisdom among policy makers that more money translates into better outcomes, which was clearly not the case.

My 'mission' was simple - I was to observe Pratham's 'summer camps' and provide a status report with recommendations for future action. However, nothing prepared me for the enormity of the challenge, the mindboggling logistics, the scale of human resource mobilization, and most importantly, the sheer commitment of tens of thousands of volunteers who were the heart and soul of the effort which reached over a million children in the state. But it was not only the volunteers who were committed - even teachers who were jaded by their years in a system which did not reward innovation and performance seemed to have been energized. Even in the middle of the summer recess, teachers came to open the school gates at seven in the morning where they would be met by eager children waiting for lessons to begin.

The objective of the summer camp was simple: provide support to children who cannot read at the level that is expected of them according to their grade. With a few weeks of intensive reading lessons over the summer when the schools are closed for holidays, the children will be prepared when the new textbooks are distributed after the schools reopen in July. It seemed an impossible task - some of the children in standard 2 and 3 did not even recognize basic alphabets, while some in standard 4 barely managed to read words! How would such diversity in learning be addressed in such a short time?

Thankfully, I was proved wrong. As I trekked through rice fields, unpaved roads and broken culverts to get to schools few government inspectors ever visited, I saw the same energy and commitment from the volunteers and teachers. A rigorous randomized evaluation of the summer camps showed that there was significant improvement in reading and mathematics levels as a result of the support. More importantly, the gains were visible even two years after the summer camp ended. It seemed fairly obvious how our school system could deliver what it is expected to - helping children to attend school and learn well.

More than half a decade and a few billions of dollars of taxpayers' money later, however, we are no closer to solving the riddle of low levels of learning across government schools in India. Soon after my visit to Bihar, the Right to Education Act was passed in 2009 which set infrastructure and teacher norms for every school in the country. Unfortunately, all these were in terms of inputs without any learning target. Maybe as a consequence, ASER 2013 provided evidence that the proportion of children in Standard 5 who could read Standard 2 texts in government schools was actually falling, especially in poorer, more populous states. Coupled with the rise in the share of children enrolled in private schools, the ASER findings are a serious indictment not only of the delivery of public education, but also of the method of financing of public education per se.

[^7]Why is it that higher public expenditure on elementary education has not improved levels of learning? One explanation from my experience with the summer camps in Bihar and five years of the PAISA survey² is that after a certain threshold of inputs is reached, increasing levels of learning has very little to do with money. It requires system-wide upgrades and not marginal improvements. It requires a fresh look at norms and standards, monitoring mechanisms and data systems, assessing learning needs of each individual child and tailoring the curriculum to be more aligned with the capacity and level of the teaching-learning process. Some of these require investment in teacher quality, data systems and evaluation mechanisms, while others are intrinsically linked to administrative capacity and commitment. This leads us to the final point: can we target public finance to incentivize and reward performance? As the tens of thousands of teachers and volunteers of Read India would testify, the task is not all that difficult. If there are clear goals, strategies, support and monitoring, significant gains in learning can be achieved at relatively low cost. The only requirement is that the public delivery system be flexible enough to respond to the needs of the children, the community and the school. When public finance addresses learning needs and rewards performance, its "ASER" will be significant in the years to come.

# Do private tuitions improve learning outcomes? 

Ambrish Dongre ${ }^{1}$

#### Abstract

Despite increased attention to school based learning over the past decade by policy makers, the learning levels of children in the Indian education system have remained consistently low and have, in fact, declined over the past 8 years. The latest Annual Status of Education Report (ASER) shows that only $41 \%$ of children in the age group of 6-14 can read a standard 2 text (ASER 2013). Consequently, critical and rigorous analysis of policies surrounding provision of school-based education has received much-deserved attention (see Muralidharan (2013) for a detailed discussion). In the process, the role of additional educational inputs provided by households, such as private tutoring, has remained neglected.

Private tutoring is defined as fee-based tutoring that provides supplementary instruction to children in academic subjects that they study in the mainstream education system. This phenomenon, also referred to as 'shadow education', is widespread across many developing countries, including India (Bray, 2007). As per the latest ASER (ASER 2013), approximately one-fourth of children enrolled at elementary level (Std. 1 to 8) in rural India attend private tuitions. Parents and students pay, on average, Rs 170 per month, amounting to slightly above Rs 2000 per annum to attend these tuitions (Wadhwa, 2014). Despite large numbers of students attending private tuition and substantial private expenditure on it, the manner, nature, pedagogic characteristics and effects of private tutoring has escaped scholarly attention (Majumdar, 2014).

Assessing impact of private tuition on learning outcomes of school children
Finding a difference in learning outcomes of those who attend tuition and those who don't, and attributing it to private tuitions is misleading. Part or all of the difference in learning outcomes might be due to different characteristics of children who attend tuition. There are observable and unobservable differences between the two groups of children, which make it difficult to figure out the effect of tuition, if any. To give an example, ASER data indicates that children belonging to richer households are more likely to attend tuitions. Richer households are also likely to provide more support to a child in the form of other material inputs. Data also shows that children of more educated parents are more likely to attend private tuition, and more educated parents are also in a position to help the child with studies. This makes it difficult to disentangle the effect of tuition from the effect of other material inputs, or from the effect of having educated parents.

One way to disentangle the effect of tuition from the effect of inter-household factors on learning outcomes is to utilise variation in tuition status of children within a household (Dongre and Tewary, 2014). ${ }^{2}$ To give a simplistic example, suppose there are two children in a household. One attends private tuition, the other doesn't. Then, the difference in the learning outcomes of these two children would be attributed to private tuition since all other observable and unobservable factors at the household or village level affecting learning outcomes (such as income of the household, parental education, parent's taste for education, socio-economic amenities in the village) are same for both children. But this technique doesn't eliminate the problem completely since it can't control unobservable child-specific differences such as motivation, intelligence, dedication etc. Again to give a simple example, let's assume that the more motivated among the two children opts for private tuition. Then better learning outcomes are partly the result of higher motivation. But our approach would ascribe it to tuitions alone, thus over-estimating the effect of private tuitions. ${ }^{3}$

We use ASER data for 2011 and 2012 to carry out this exercise. A unique feature of this dataset is availability of learning outcomes for reading and math, and information on whether the child attends private tuition. The dataset also has information about whether the child attends government or private school, age and gender of the child, class in which the child is studying, both parents' age and education, and availability of certain household amenities (such as electricity, toilets, whether house is pucca). The data is representative of rural

[^9]areas across the country. The number of sampled children in the age group of 6-14 years is close to half a million, which is a major advantage of the dataset. ${ }^{4}$

## Tuition has a large, positive effect on math and language test scores

The results show that attending private tuition has a large positive effect on test scores of math and language (separately or combined) for students in the age-group of 6-14 years. The effect is as large as an additional year of education or the effect of attending a private school instead of a government school. Interestingly, tuitions are more beneficial for children who are more disadvantaged, and have lower learning levels. For example, the effect of tuition is almost twice as high for children enrolled in government schools, compared to those who are enrolled in private schools. Similarly, children whose parents are less educated or children who stay in non-pucca households benefit more from tuitions. We also analyse the effect of tuition on test scores separately of 6-10 year old children. The results remain unchanged.

There is significant variation in the prevalence of private tuition across states. In ASER 2013, states like West Bengal and Tripura have 67-69\% children at elementary level attending private tuition, while the corresponding figures for Bihar and Odisha are $40-50 \%$. We find that the effect of tuition is higher in these states compared to the effect at the all-India level.

Why do private tuitions have a positive effect on learning outcomes? One straightforward explanation is that those who attend tuition spend more time studying. Though ASER doesn't capture time spent at tuitions, analysis of India Human Development Survey (IHDS) data indicates that those who attend tuition spend, on average, 9 hours in tuitions. That would mean 1.5 extra school days per week. Another explanation could be remedial teaching in the sense that tutors might be making some efforts to identify the child's weakness, and teach accordingly. Maybe private tutoring exclusively focuses on regular mock tests and exam preparation. Finally, as Dr. Wadhwa points out in the ASER report, the link between incentives and accountability - if someone is paying for a service, the onus is on the service provider to deliver, because the consumer can always 'vote with her feet'.

# Government vs private schools: Have things changed? 

## Wilima Wadhwa ${ }^{1}$

This is the $10^{\text {th }}$ year of ASER and two major trends emerge clearly. First, there has been a steady increase in private school enrollment; and second, learning levels are not improving. In fact, learning levels that seemed to be "stuck" till 2010, took a nosedive thereafter. While there is a lot of variation across states, these trends hold more or less across the country.

Private school enrollment stood at around $18.7 \%$ in 2006 and has steadily crept up to $30.8 \%$ in 2014. This upward trend is seen in states with low as well as high private school enrollment. For instance, it has doubled in low private school states like Odisha, Madhya Pradesh and Chhattisgarh during this period. On the other hand, in Uttar Pradesh where it was high to begin with (30.3\% in 2006), it has crossed the 50\% mark in 2014.

In addition, about a fourth of all children in rural India pay for private tutors. At the All India level, this number has remained steady across government and private schools. The interesting thing, however, is that the incidence of private tuition is much higher in states with low private school enrollment. For instance, in Odisha and Bihar, almost $50 \%$ children pay for additional help. In West Bengal this number is as high as $70 \%$. As a result, the percentage of children with some private inputs in their schooling has increased from about $40 \%$ to $48 \%$.

The second trend that is clearly visible is the lack of improvement in learning levels. The percentage of children in Std. 5 who could read a Std. 2 level text was $53.1 \%$ in 2006 . While there was a lot of variation across states, till about 2010, at the All India level there was not much change in learning levels. In 2010, this figure was at $53.7 \%$ - India was in a "Big Stuck". ${ }^{2}$ After 2010, however, learning levels even at the All India level declined and the percentage of readers in Std. 5 fell to $47 \%$ in 2013, rising marginally to $48.1 \%$ in 2014. Given the variation across states, for All India levels to actually fall, it must be the case that most large states witnessed a decline in learning levels during this period.

If we look at government and private schools separately, the fall in learning levels appears to come mostly from government schools. Between 2006 and 2010, the percentage of children who could read a Std. 2 level text in Std. 5 in government schools fell slightly from $51.4 \%$ to $50.7 \%$. Private schools posted learning gains during this period with the percentage of readers rising from $60.8 \%$ to $64.2 \%$. However, after 2010, learning levels in government schools plummeted to a low of $41.1 \%$ in 2013 , recovering slightly to $42.2 \%$ in 2014 , while those in private schools remained more or less steady $-63.3 \%$ in 2013 and $62.5 \%$ in 2014. A learning gap of 9.8 percentage points in 2006 doubled to 20.3 percentage points in 2014!

This seems to be the aha moment - the picture is clear! Parents are shifting their children from government to private schools because the latter provide better learning outcomes. This is a perfectly plausible story and seems to be completely consistent with the data. However, therein lies a fallacy. Comparing learning outcomes of children in government schools with those in private schools is not comparing apples with apples. It is a wellestablished fact that household and other characteristics of private school children are very different from those of government school children. Since learning levels depend not only on the characteristics of a child's school but also on her own characteristics and those of her household, attributing all the observed differences in learning levels to differences in schools is incorrect. This is the self-selection problem and therefore these other factors have to be controlled for in order to make a fair comparison.

In the ASER 2009 report, my analysis to disentangle the effect of other factors from that of private schools on learning outcomes, had shown that for Std. 1-5, the learning gap of 8.6 percentage points between government and private schools reduces to 2.9 percentage points once the child's own, her parents' and her household characteristics are controlled for. This meant that $2 / 3$ rd of the learning differential between government and private schools could be attributed to factors other than the type of school.

[^11]A similar analysis was done for states and there was considerable variation there. In the case of reading in the local language, in many cases most of the learning differential disappeared once other factors were controlled for. This was the case in Uttarakhand, Chhattisgarh, Madhya Pradesh, Maharashtra, Andhra Pradesh, and Tamil Nadu. In the case of Madhya Pradesh, the difference was actually reversed - once other factors are controlled for, government schools performed better than private schools. In the case of Andhra Pradesh and Tamil Nadu, where government schools had higher learning levels to start with, the gap widened once other factors were taken into account.

However, in 2009, the gap between government and private schools was much smaller. As discussed above, this gap has more than doubled in the last 5 years. Does this mean that the contribution of private schools has gone up? In 2014, the difference between government and private schools in the proportion of Std. 1-5 children who can read a Std. 1 level text is 17.9 percentage points. Once we control for the child's other characteristics, this differences falls drastically to 5.1 percentage points. This constitutes a fall of $72 \%$ in the learning gap as compared to a fall of $66 \%$ in 2009. In other words, in 2014, factors other than school-type are responsible for a larger proportion of the learning gap between government and private schools than was the case in 2009.

State-wise analysis of the ASER 2014 data shows that controlling for other factors reduces the governmentprivate school learning gap considerably in all states. In the case of Punjab, Gujarat, Maharashtra, Andhra Pradesh and Karnataka, the difference is reversed with government schools outperforming private schools once household and parental characteristics are controlled for. In Kerala and Tamil Nadu, where government schools were better than private schools to start with, the difference widens, once other factors are taken into account.

So now we have a puzzle. More and more children are moving to private schools with the learning gap widening between government and private schools; and yet a smaller proportion of this gap is actually attributable to private schools themselves! How do we resolve this puzzle? If other characteristics are contributing more to learning outcomes, then that seems to be the obvious place to start.

Among the child's own characteristics we control for age, gender, tuition and the number of siblings. Incidence of tuition has remained steady at about $25 \%$ for both government and private school children. The number of siblings has a negative impact on learning outcomes. More siblings could mean less attention from parents or more work at home for girls, leaving less time for schoolwork. Census 2011 shows a $24 \%$ increase in rural households since 2001. But the rural population increased only by $12 \%$ over the same period, implying a fall in average household size. Poorer households tend to be larger with higher dependency ratios. Children of such households are also more likely to go to government schools. If the size of such households is coming down, this could be contributing to a better learning environment at home. But then again, this effect is likely to be more operative for private school children who come from smaller households to start with.

We control for the education level of both the mother and father. The more educated the parents, the higher the probability that the child will perform well in school. Between 2009 and 2014, the proportion of parents with no schooling has fallen for both government and private school children. However, the gap between them has increased. In 2009, $55.6 \%$ children in government schools had mothers who had never been to school, as compared to $40.8 \%$ children in private schools. The corresponding figures for 2014 are $53.3 \%$ and $36.7 \%$. Similarly, in 2009, 34\% children in government schools had fathers who had never been to school, as compared to $19.1 \%$ children in private schools. The corresponding figures for 2014 are $31.1 \%$ and $15.6 \%$.

The gap at the upper end of the distribution is even larger. In 2009, 3.2\% children in government schools had mothers with more than 10 years of schooling as compared to $10.8 \%$ children in private schools. The corresponding figures for 2014 are $4.1 \%$ and $15.6 \%$. Similarly, in 2009, 11.2\% children in government schools had fathers with more than 10 years of schooling as compared to $24.7 \%$ children in private schools. The corresponding figures for 2014 are 12.2\% and 29.6\%.

What the above figures imply is that while parental educational indicators are improving for both types of children, the home environment for private school children has improved much more than for government school children. This is also probably due to the fact that some educated parents of children who were in government school in 2009, have shifted their children to private schools. So in 2014, private schools were drawing their children from a more educated population of parents than in 2009. Not surprising, therefore, that a larger proportion of the learning gains can be attributed to the home environment of these children.

What about affluence? Private school children typically come from richer households who can afford to pay the additional school fees. Richer households tend to be smaller, allowing parents to devote more attention to their children; they are likely to have mothers who don't have to go to work and can therefore spend more time with their children; they can afford to pay for supplemental learning aids for their children; etc. For all these reasons, as well, private school children may perform better than government school children.

Since 2008, ASER has collected information on household assets. Since income information is hard to collect and often unreliable when available, household assets work as good proxies for affluence. As in the case of parental education, households of both government and private school children are richer in 2014 as compared to 2009. But again, the gap between the two is increasing. Other than electricity connection and mobile phones, all the other indicators have improved more for private school children than for government school children. And in the case of these two indicators, even in 2009 more than $75 \%$ private school households had an electricity connection and a mobile phone. Therefore, here again private schools are drawing their pupils from a richer pool than they were in 2009.

So before we start jumping on the private school bandwagon, a couple of points need to be kept in mind. First, not only are parents paying to send their children to private schools, they are also working harder to make sure their children perform better in these schools. Second, while private schools do deliver better outcomes - the gap narrows but does not disappear - even they are not producing learning outcomes that are anywhere near grade level competency. So then the question is: How much "Bang for the Buck" should parents demand from private schools?

However, the real tragedy in this is the situation of government school children. Every year the government spends a huge amount of money on public education. Yet, learning levels have been declining every year since the RTE was introduced in 2010, and were stagnant before that. Between 2010 and 2012, India's elementary education allocations increased by $23 \%$ from Rs. 119 billion to Rs. 147 billion. Expenditure, however, has not kept pace with these increased allocations. In 2011, $62 \%$ of the SSA allocation was spent as compared to $70 \%$ in 2010. ${ }^{3}$ Maybe that is why SSA allocations have increased only marginally this year. But one of the items that the government has decided to do away with is the TLM grant - this was the Rs. 500 per teacher per year grant that teachers could use towards teaching and learning material like charts, globes, books, etc. ${ }^{4}$

Maybe the government in its infinite wisdom knows something we don't. But if children graduate primary school without being able to read, what do we expect them to learn in middle school? And, if they join the labor force at the end of Std. 8, with automatic promotions up to that point, will the quality of our labor force be good enough to reap the demographic dividend and fuel "Make in India"?

[^12]
# Links between reading and other skills: What does ASER tell us? 

Ashok Mutum, Savitri Bobde, Ketan Verma ${ }^{1}$

The ASER survey has been measuring the fundamental skills of children across rural India for a decade now. Every year, children in the age group of 5 to 16 years are assessed in basic reading and numeracy. These skills are important precursors to learning in higher grades and hence are assessed in all ASER surveys.

In addition, we have included some 'bonus' tasks each year to assess something more than just the basic skills. In different years these have included as basic comprehension, general knowledge, telling time, money-related tasks and other everyday tasks like reading a calendar, menu card etc.

The main objective of assessing 'beyond basics' was to understand the linkages between basic and higher level skills. The idea was to explore what more the 'story' level readers can do in language and arithmetic. Does reading the ASER 'story' mean only decoding or do children read with understanding? How important is reading with respect to other skills like problem solving and numerical operations?

To accomplish this objective, ASER has assessed various competencies over the years. Table 3 given at the end of this article summarises these additional competencies that have been assessed.

## What does ASER test in basic reading and numeracy?

In reading, children are asked to read letters, simple two-letter words with one or two matras, and strings of sentences which are categorized in two levels: a paragraph and a story. The paragraph has 4 sentences and roughly 20 words at Grade 1 level of difficulty. The story has 8 to 10 sentences and approximately 60 words at Grade 2 level of difficulty. The numeracy test includes number recognition (one digit as well as two digit numbers) and basic number operations required in subtraction and division. These operations correspond to Grade 2 and Grade 3/4 level of difficulty respectively.

This article explores the linkages between reading levels and basic comprehension, ${ }^{2}$ numerical operations and problem solving3 through the 'bonus' tasks administered in ASER 2006 and ASER 2007. For the sake of brevity, we will limit the discussion to those children who we categorize as readers, i.e. those who can read a Grade 2 level text ('story' level children).

## How did we assess comprehension and problem solving?

In 2006, comprehension tasks were introduced for the first time in ASER. More elaborate comprehension tasks were included in ASER 2007. Problem solving tasks were included in ASER 2007. Figures $1,2 \& 3^{4}$ explain these tasks and the administration procedures for comprehension and problem solving respectively.

Fig. 1 Sample of the comprehension task included in ASER 2006

> Meenu is the youngest member of her family. She has an elder brother and an elder sister. Meenu is seven years old and studies in Std 2 . They own several buffaloes and goats. Meenu's mother is very busy all day taking care of the household and animals. Meenu's brother and sister help their mother whenever they can. All the children have fun with the animals.
> Meenu's father works in the post office of a nearby village. He goes to the post office every morning. There he fills his bag with letters and goes out to deliver them. Sometimes Meenu also go with her father. She sits at the back of the bicycle. Meenu enjoys going with her father to deliver letters to people. Some people ask her to read their letters aloud. Some people even want their letters to be written by Meenu. Meenu thinks she should also work in a post office when she grows up.
Q.1. Who all are in Meenu's family?
Q.2. What does Meenu do with her father?

Administration process of the
comprehension task in ASER 2006
Children who successfully read the ASER story were asked to read another story (longer than ASER story) at Grade 3 level.
Children were also asked to read and orally answer two questions based on this story.

[^13]Fig. 2 Sample of the comprehension tasks included in ASER 2007

## Administration process of the comprehension tasks in ASER 2007

All children in the the age group of 5 to 16 were asked to read a paragraph.
Two fact retrieval questions based on this paragraph were read out to the child. The child was asked to answer the questions orally.

Same procedure was followed for the story.

## Administration process of the problem solving tasks in ASER 2007

All children in the age group of 5 to 16 were asked to solve 2 subtraction word problems. These were read out one by one by the surveyor to the child. The child could answer the questions orally or in writing.
Both the subtraction word problems were currency related operations with Rs. 50/- (2-digit with borrowing).

## What did we find?

Does a child who can read a story also understand it?
The ASER tool has often been criticized as a tool that only assesses decoding and not reading in its entirety (i.e. reading with comprehension). But is it possible for a child to read the ASER 'story' fluently without understanding it?

Both in ASER 2006 and 2007 we find that if a child is at 'story' level then she is also likely to make some meaning of the story. In ASER 2006, 89\% of 'story' level children of Grade 5 could answer both fact retrieval questions based on the Grade 3 level story. (In 2006, comprehension questions on Grade 2 level story were not asked). A similar trend was observed in ASER 2007, where $85 \%$ of 'story' level children in Grade 5 could successfully answer both fact retrieval questions based on the story. In addition, $8 \%$ children could answer only one question. This implies that more than $90 \%$ children in Grade 5 are reading with some basic understanding. This number increases to $97 \%$ for Grade 8 children (refer to Chart 1).

This evidence strongly corroborates the conclusion that if children are reading the ASER 'story' fluently then they are not merely decoding; the majority of them read it with understanding.

In addition, the 2006 results also demonstrate that children's reading ability is not limited to a 60-word Grade 2 level text, since the majority of 'story' readers could also read a Grade 3 level text and answer two questions based on it. Based on this data, we can conclude that children who are at 'story' level in ASER reading tasks can also read texts at a slightly higher level with understanding.
Does the above finding hold true for children who can read a paragraph?
It is important to see if children who can read shorter text ('paragraph') demonstrate the same results with respect to comprehension. Can we term these paragraph level children as 'readers'? Are they at the same level of comprehension as their story level peers? How different are these two ASER levels with respect to the ability to read with understanding?

From ASER 2007 data, we see a marked difference in the performance of 'paragraph' level children. 85\% of 'story' level children in Grade 5 were able to answer both fact retrieval questions correctly. This percentage drops to $70 \%$ for 'paragraph' level children of the same grade (refer to Charts $1 \& 2$ ). A similar difference can be seen among younger children (Grade 3) and older children (Grade 8). Expectedly, one can also see that as children progress to higher grades, their ability to comprehend increase.

This demonstrates a strong, albeit expected link between children being able to read the ASER story and make meaning of it.

## Do story level children also perform better in arithmetic?

Similar to the link between reading and comprehension, a strong relationship can be observed between reading the ASER story and basic skills in arithmetic. The data from ASER 2007 shows that there is a significant increase in the ability to solve numerical division operations among children whose ability to read is higher (story level vs paragraph level vs word level vs letter level children) (refer to Table 1). Children's ability to do numerical division vary enormously by reading level. For instance, $65 \%$ 'story' level children in Grade 5 can also divide. This number drops to $16 \%$ for para level children.

Table 1: \% Children who can do numerical division, according to reading ability - ASER 2007

| Grade | 'story' level | 'paragraph' level | 'word' level | 'letter' level |
| :---: | :---: | :---: | :---: | :---: |
| 3 | 38.9 | 7.7 | 1.8 | 0.8 |
| 5 | 64.7 | 15.9 | 5.0 | 2.3 |
| 8 | 79.3 | 28.4 | 9.3 | 9.9 |

Similar trends are visible for the problem solving tasks: $81 \%$ of 'story' level readers could do both problem solving questions correctly compared to $49 \%$ 'paragraph' level children (refer to Table 2). This finding is particularly interesting because the children were not required to read the word problems to solve them. These word problems were read out by the surveyors.

Table 2: \% Children who can do both questions (Q1 \& Q2) of the problem solving tasks (word problems) correctly, according to reading ability - ASER 2007

| Grade | 'story' level | 'paragraph' level | 'word' level | 'letter' level |
| :---: | :---: | :---: | :---: | :---: |
| 3 | 66.0 | 38.1 | 13.7 | 7.3 |
| 5 | 81.3 | 49.0 | 24.1 | 17.8 |
| 8 | 90.3 | 63.9 | 39.6 | 34.9 |

## Conclusion

We know that children who can read the ASER story are not just decoding. They are reading with some basic understanding of the text. This strong correlation, observed in both 2006 and 2007, is the reason that comprehension has not been included in the ASER basic reading tool since 2007.

Expectedly, 'story' level children are also better at arithmetic and basic problem solving. If a child can read, she is more likely to be able to solve numerical operations and also understand a word problem and solve it correctly.

The above findings re-emphasise the fundamental importance of children learning to read. Being able to read at the 'story' level seems to be significantly correlated to the attainment of both comprehension skills and other skills for different subjects. This evidence has directed our approach to developing 'beyond basics' assessments. In the past few years, ASER Centre has developed and implemented a variety of assessments for different subjects and higher grades. We have assessed reading in these assessments and these links have been revalidated.

Given the low and varied learning levels of rural India across grades and the importance of reading, irrespective of the subject or the level, reading tasks should be an integral part of any assessment, whether at primary level or higher.

Table 3: Description of ASER 'Bonus' tasks over the years

| No. | Domain | Description | Details | Target population | Years |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Reading <br>  <br> Comprehension (Fact Retrieval) | Child was asked to read a Grade 3 level text and was also asked to read and orally answer two questions based on this text. | In all Indian languages \& English | Children who could read Grade 2 level text fluently | ASER 2006 |
| 2 |  | Child asked to read Grade 1 level text ("paragraph"), then based on this text, 2 fact retrieval questions were read out to the child and the child had to answer orally. Same was done with the Grade 2 level text. |  | All children: age 5 to 16 | ASER 2007 |
| 3 | Arithmetic | Child asked to read two word problems - one on subtraction (2 digits) and the other on division (3 digits divided by 1 digit). Child could answer orally or in writing. | In all <br> Indian <br> languages <br>  <br> English | Only to those children who could read Grade 2 level text fluently | ASER 2006 |
| 4 |  | Child asked to solve word problems with currency operations with (Rs 50) Child was asked orally. Child could answer orally or in writing. |  | All children: age 5 to 16 | ASER 2007 |
| 5 | Applied arithmetic and everyday tasks | Child asked to tell time with visual images of clocks and to use actual currency notes to solve oral word problems. | In all Indian languages \& English | All children: age 5 to 16 | ASER 2008 |
| 6 |  | Child asked to solve basic questions using visual image of calendar \& menu cards (in word problem format). Also do computations for area and estimation tasks (visual images and word problems that are read out to the child). |  | Children in Grade 5 or above or age 10 or above if out of school | ASER 2010 |
| 5 | English: <br> Reading \& Comprehension | Child asked to recognize English letters, read simple words, basic sentences. Child also asked to say meanings of the words and sentences read. | English as a second language | All children: age 5 to 16 | ASER 2007, <br> ASER 2009, <br> ASER 2012, <br> ASER 2014 |

## Rukmini Banerji¹

There is a strange gap in India involving young people in the age group fourteen to eighteen. The Right to Education (RTE) Act guarantees free and compulsory education up to the age of fourteen. The Juvenile Justice Act 2000 for the care and protection of children (Section 26) prohibits the employment of children below the age of eighteen. So, what do we know about this age group? As a country how are we dealing with those who are over fourteen but still below eighteen? What do we expect of them?

The Census of India 2011 indicates that there are anywhere from 20 to 25 million persons in each single year age in this bracket. Rough calculations suggest that the population in the fourteen to eighteen age group is close to 100 million. From DISE report cards we know that the size of the cohort enrolled in Std. VIII is increasing each year (from 11.3 million in 2004-05 to 21.4 million in 2013-14). ${ }^{2}$ In most states, more children are staying in school till Std. VIII. ${ }^{3}$

Moving into secondary school, we can see that a growing number of young people are appearing for board exams each year. For example, in Bihar in 2004, half a million students took the Std. X Bihar state board exams ( $66 \%$ passed). By 2014, this number had gone up to 1.34 million (with a pass percentage of $73 \%$ ). Another example, in Maharashtra in 2012, 1.49 million students took the board exam ( $81 \%$ passed). In 2014, this number had increased to 1.55 million (with a pass percentage of $88 \%$ ). The change over ten years in this regard is massive and significant for a variety of reasons. These trends are the natural outcome of the big push for universalizing elementary education. An increasing number of young people are moving through the education system and completing more years of schooling.

What does "moving through the education system" entail? Much of the focus of the last ten years of ASER has been on children in primary school and on their ability to read and do basic arithmetic - the fundamental building blocks of learning. This decade long ASER data set can help shine a spotlight at the point of exit from the compulsory stage of the education system, i.e. Std. VIII. Some interesting facts emerge from this data. The proportion of children currently not enrolled in school (age 11-14) has dropped from 9\% (in 2006) to less than $5 \%$ (in 2014). But for older children (age 15-16), the same figure started out much higher ( $21.2 \%$ in 2006 ) and has decreased much less over time ( $16.6 \%$ in 2014). ${ }^{4}$

The ASER measurement of reading is a very basic one. ASER 2014 numbers suggest that even today about a quarter of all children enrolled in Std VIII have difficulty reading a simple text at the Std II level of difficulty, and close to half still cannot do a division problem. ${ }^{5}$ For 15-16 year olds, the comparison of basic reading and math levels for those who are in school and those who are not currently enrolled is quite stark. For the currently enrolled, the percentage of those who can read at Std II level (or higher) is almost $85 \%$. But of those who are also 15-16 years old but not currently in school, only $36 \%$ can read a Std II level text. In math, $50 \%$ of those still in school can do division (and more); but barely $10 \%$ of those who are not in school can do so.

Underlying the ASER data, there are at least two interrelated trends that are even more worrying. First, the basic ability of Std VIII children in 2014 seems to be lower than that of children who were in Std VIII in 2008 or 2009 (Figure 1). Second, if we track different cohorts of children moving through the education system (from Std V to Std VIII) across different years we see that the learning trajectories are very flat. This means that if you did not

[^14]learn the basic skills by Std V , chances are low that you will pick up these skills in later years (Figure 2). ${ }^{6}$ So despite an increase in the number of years spent in school, basic capabilities as measured by the ability to read and to do arithmetic remain stagnant, at least for some children.

Figure 1: Std VIII over time: \% Children who can do division ASER 2008-2013: All India (rural)

Figure 2: Different cohorts moving through Std V-Std VIII stage: \% Children who can do division ASER 2008-2013: All India (rural)

Several recent studies on student achievement in India provide more substance and depth to our understanding of where children are as they complete Std VIII. ${ }^{7}$ In summarizing the key findings from these studies, it would be fair to say that overall many students are able to do tasks that are based on rote learning and textbook content. But the ability to apply knowledge or skills to different contexts is much weaker. These weaknesses are at least in part due to the fact that teaching-learning practices in Indian classrooms do not focus much on activities that enable students to learn how to express opinions, solve problems or develop independent critical thinking skills.

The main driving force in Indian secondary schools seems to be successful performance in examinations rather than any other learning outcomes. There is growing evidence that large numbers of children, especially in the eastern part of the country are seeking help from outside school sources to supplement "learning" especially in upper primary grades. The massive coaching industry in the secondary sector is thriving and visible everywhere - and all of these efforts are geared to ensure and reinforce successful exam taking.

What happens if you leave school before getting to the Std X board exam stage? Or if you leave after Std VIII? Can you get back into the mainstream education system and resume studying? The simple answer is no. There are open schooling opportunities available but if one of the reasons behind your leaving school was that you were struggling with academic content, then having to cope with it alone in an open school setting hardly solves your problem. Second chance programs are few and far between and are also geared towards exam taking, with very few that link to further learning opportunities beyond the terminal stage of examinations.

What if children in this age group wish to start working? There are educational and age requirements for entry into most vocational skilling programs. Job placements are not possible before age eighteen. In any case, very few skilling programs ensure work placements and hardly any can promise permanent entry into jobs in the organized sector. The reality of India is that the vast majority of the population works in the unorganized sector. ${ }^{8}$ That is where most young people will end up as well. However hardly any research has examined what kind of knowledge or skills help improve productive capacity in the unorganized sector. Further, the entire architecture of the education system assumes that with sufficient years of schooling and appropriate certifications via examinations along the way, young people will enter the organized employment sector. The fact that the reality is really quite different does not seem to have made any dent either on how school education is organized or on how educational and occupational aspirations of students and parents are formed.

[^15]As a country we were quick to dismiss our encounter with the PISA (Program for International Student Assessment). But perhaps we threw the baby out along with the bath water. OECD countries use student performance in PISA assessments to understand how well prepared (or not) fifteen year olds are for the world of work and for life after school. It is true that the assessment tasks in the PISA tests may be closer to the kinds of curriculum and pedagogy common in schools in European and other developed countries. It is also true that most students in such countries will move into jobs in the organized sector. We can decide that the PISA framework is not appropriate for us. But have we given serious thought to the skills and knowledge that our young people are going to need to negotiate the life that lies ahead of them?

So here is where we are. We have close to 100 million young people who neither "fit" easily into the education system, nor are they prepared adequately for the world beyond. Simply universalizing the provision of secondary schooling does not address the challenge we have on hand. Simply providing inputs and building infrastructure to channel children into the next stage of education is not sufficient for what young people need. In primary school, we have seen that the age-grade structure of curriculum and teaching leaves many children without even the basics. We know that the methods we use in our schools are not effective for teaching children how to apply what they know to what they see. Our children can do tasks that involve rote learning but cannot apply themselves in new and different contexts. For both secondary schooling and skilling, we should not simply construct institutions or design systems that are unable to deliver what we want.

But what is it that we really want for our young people? What knowledge and what skills do we think our young people must have to face the world as they leave school? What is it that the country needs to do to ensure that every young person has the opportunity to fully explore their capability to learn and to realize their full productive capacity? Why is there no national debate on this critical question? When will we think about where we want our young people to end up, and work backwards to ensure that our children are well prepared to take advantage of the opportunities that are available?

Perhaps it is on this gap that the next version of ASER should shine the spotlight.

## About the Survey and

 Frequently Asked Questions
## The why, what and how of ASER

The Annual Status of Education Report (ASER) survey is the largest citizen-led, annual household survey in education in India. Surveyors record whether sampled children aged 3 to 16 years are enrolled in school. They also assess children aged 5 to 16 years orally in basic reading and arithmetic. ASER collects data for a representative sample of children from every state and almost every rural district in India. On average, ASER reaches over 560 districts each year, surveying an average of 650,000 children in more than 16,000 villages across the country ( 30 randomly sampled villages are surveyed per district) to generate estimates of learning outcomes at the district, state and national levels.

A unique feature of ASER is that in each district, a local institution/organisation conducts the survey. Every year, close to 25,000 volunteers from over 500 organisations participate in conducting the ASER survey, making it one of the largest participatory exercises in the country. By participating in ASER in their district, people contribute to a massive and important national effort. ASER was launched in 2005 and has been done every year since then. 2014 is the tenth year of ASER.
The ASER initiative emerged out of a set of interrelated events, experiences and opportunities. This note contains some background information that may be useful for understanding the context and purpose of ASER. The objective of the note is to explain major influences on the design, content and implementation of ASER over the years.

## Pratham's ${ }^{1}$ early work in primary education

In the first decade of our work with children in rural and urban communities across India, we noted that both communities and governments were preoccupied with the visible challenges in education: those of inputs, access, and provisions. The less visible but deeper issue of children's learning was 'felt' but not clearly articulated in educational debates and discussions. In many states, more than $90 \%$ of children in the age group of 6-14 years were already enrolled in school. But there was no concomitant focus on children's learning either in policy or in practice. As a consequence, there was no clear nationwide agreement on learning goals or how measurement of learning should be done in elementary education. In fact, in many quarters within the education establishment in India, there was active resistance to the notion of defining learning in measureable terms and at times to the very idea of assessment as well.
In our work in communities and schools, we found that surprisingly large numbers of children in primary grades were struggling with early reading and basic arithmetic. We too were struggling to deal with this problem. We needed to be able to accelerate children's pace of learning if they were to have a real and meaningful opportunity to complete primary schooling. One of the big learnings from this phase of our work was the realisation of the fundamental importance of early reading. Without learning to read, a child could not propel herself or himself further in the education system.

Large scale pilots within Pratham led to three important developments. First, we designed a series of simple reading tasks that helped Pratham instructors gain an understanding of their children's reading level and also helped them to track children's progress. These tools were easy and quick to administer, and the results were easily understood by teachers, administrators, and parents.
Second, an unintended consequence of using this tool was that it seemed to help parents, especially illiterate or poorly schooled parents, understand what reading entailed. This demystification of 'learning' enabled parents to understand the goal of the reading interventions and to support their children's learning. The use of the tool with communities created awareness and led to mobilisation. Given the assessment tool's simplicity, it also worked well when taken to scale and across different contexts.

The third development was the evolution of a pedagogical package by Pratham. The model included methods, materials and measurement that helped children (especially those above the age of 7-8) learn to read quickly. Within the Pratham network, this method came to be called 'L2R' (Learning to Read). Like the reading assessment tool, instruction using the L2R package was possible on a large scale, both inside schools (by teachers) and also in the community (with community volunteers). Pratham's experiences in the period 2002-2005 indicated that if reading was a problem, some solutions were attainable fairly quickly. ${ }^{2}$

[^16]
## The political and economic context

The broader political and economic landscape in India in the first decade of the new century was also a factor that influenced the birth of ASER. At the national level, the UPA government had come into power in 2004. In its initial policy pronouncements, the new government spoke of "outlays to outcomes" ${ }^{3}$ and annual reports of outcomes for the different social sectors were proposed. ${ }^{4}$ Despite this rhetoric, hardly any central government department was able to provide annual reports on outcomes. The central Ministry of Human Resource Development continued to produce annual reports focused on inputs, access and provisions as well as financial reports on allocations and expenditures. Periodically it also produced reports on student achievement in government schools. ${ }^{5}$
The allocations for elementary education, however, saw a significant increase from the financial year 2004-05, after the Union government imposed a 2 percent education cess for elementary education. The cess is a earmarked 'tax-on-tax' that is used exclusively to finance elementary education. Over the years it has been allocated partly towards the Sarva Shiksha Abhiyan (SSA) and partly towards the Mid Day Meal scheme.
These background contextual conditions were important in leading us to think about generating an outcomebased annual report in education that could push public discourse and action towards focusing on learning outcomes and not just on schooling inputs and provisions.

## Decision to do an annual status of education report across India

Whether or not children go to school is a visible phenomenon. Parents, communities, the public - everyone can see children going to school (or not). But what happens in school is more "invisible". The usual assumption is that if a child is going to school, the child must be learning. Based on Pratham's experiences in urban and rural communities we knew that it was important to now look at learning. With parents, especially those who are not literate or do not have much schooling, there is a need to make it possible for mothers, fathers and family members, and people in the community, to see what is meant by learning. To understand what is meant by learning, and for people to grasp it, there is an urgent need to demystify "learning" and make it "visible".

From our work in villages across India from 2002 onwards, we had seen how generating village report cards with local participation helped to bring the issue of learning alive and make it visible in the community. A simple set of tasks (that later came to be known as the ASER tools) in reading and math were used. The assessment was done child by child and hamlet by hamlet. It was done in the community in children's homes. It was simple, so many people participated. The assessment caused a great deal of conversation among the adults about whether children could read or do arithmetic, and why or why not. Once all children in the village were assessed, a village meeting was convened wherein the results of the assessment were discussed. In village after village, we observed that previously, there had never been any discussion on children's learning. Once the problem became visible then taking action was simply the next step. Pratham team members offered to share their knowledge and experience of how to teach children basic reading and arithmetic if local volunteers would come forward. The process of assessment to action seemed straightforward.

Could the dynamics that we saw at the village level that led easily from assessment to action be replicated at the district, state or national level? The decision to do an annual survey of education across India was taken on October 2, 2005. It was a Sunday. In 2005, the decision to do a nationwide exercise - ASER - was a leap of faith, an ambitious adventure to find out if people of India were ready to look beyond schooling and focus on learning.

## Developing tools for assessing learning: Early reading and basic arithmetic

One of the first tasks for doing a nationwide assessment was to define what we meant by learning - especially learning in the early grades. By this time, our accumulated experience from years of working with children and our understanding of the available research on reading made us realise that reading was a fundamental skill. So the foundation skills for literacy acquisition in early grades such as recognising letters, reading simple words and reading Grade 1 and Grade 2 level connected text were of central focus in our assessments. Similarly, number

[^17]recognition and basic numerical operations seemed to be the first important building blocks which anchored other capabilities in arithmetic.

Across the world, most achievement tests are pen-and-paper tests administered to children in groups, typically in school. But this approach is not feasible if a child is a beginning reader or struggling to read, as it requires him/ her to read and comprehend instructions and then carry out the required tasks. Early reading is therefore best assessed one-on-one with individual children in an oral format. ${ }^{6}$ To minimise the reading demand on children and to maintain a standard approach, the arithmetic assessment was also designed to be administered individually in an oral format. ${ }^{7}$

We wanted both reading and arithmetic tasks to assess basic skills. We used textbooks as the main source of guidance on content in developing the ASER assessments, given that regardless of the state, school system, or curriculum framework, ${ }^{8}$ teaching-learning activities in Indian classrooms are heavily dependent on and driven by textbooks, ${ }^{9}$ and most teachers are mindful of 'finishing the textbook' by the end of the school year.
Language and arithmetic textbooks for early grades across all major Indian states were analysed as part of the preparation for ASER. These analyses indicated that in all states, children are expected to be able to read simple sentences in the regional language by the end of Grade 1 and basic text of $8-10$ lines by the end of Grade 2 . In arithmetic, all state textbooks expect children to be able to do a two digit numerical subtraction problem with borrowing by Grade 2. Three digit by one digit numerical division is expected of children in Grade 3 in some states and Grade 4 in others.

We knew that simply being in school was not a guarantee of learning these skills. So right from the first year, ASER looked for answers to the following questions: Are children enrolled in school? Are they able to read simple Grade 1 and Grade 2 level text? Can they recognise numbers and do basic arithmetic operations?
By design ASER is a 'floor' test: the purpose is to judge whether children are at or below a specific level (Grade 2 level for reading and Grade 3/Grade 4 level for arithmetic). The objective is not to administer grade appropriate assessments but rather to gauge early reading and arithmetic ability. As a result, the same tool is administered to all children regardless of age or grade. ${ }^{10}$

## Deciding the target population: Generating district level estimates

Each year, state governments submit annual work plans to the central government (SSA - Annual Work Plans) in order to access funds earmarked for elementary education. These plans are the basis on which financial allocations are made by the central government to the states. Annual work plans are made at the district level and then aggregated into state plans. Presumably, information available at the district level can provide useful inputs into the annual planning process. While information on enrollment and access is readily available at district and subdistrict levels in India, there was no current information on children's learning available at district, state or national levels within the government that could inform the annual planning process.
Given this information gap we decided that ASER would generate estimates for enrollment and learning at the district level. Sampling was designed to ensure that ASER estimates were representative at this level. Generating district level estimates requires much larger sample sizes than state or national level estimates. For this reason, even major government surveys such as the National Sample Survey (NSS) generate estimates that are representative only at the state level, not at the district level. For example, estimates of poverty in India are available only at the state level. To be able to generate reliable district level estimates, ASER samples 30 villages

[^18]from each rural district. This means that a total of more than 16,000 villages are sampled and visited every year, more than twice the number of villages in the NSS sample for rural India.

## Deciding where assessments should be done: Household survey

In-school assessment of learning outcomes is the standard practice in developed countries. In these countries, typically all children are in school, and all schools are listed and fall under the jurisdiction of some national or provincial authority. Since a universal list of schools exists, it is possible to draw a sample from this list. And since all children are accounted for, it is possible to sample children, whether by age or by grade, nationally or provincially.

However, this may not be the case in many developing countries, for several reasons. India is a case in point.

- School attendance varies: Although a lot of information is available on school enrollment, there is very little systematic and reliable measurement of attendance. Measuring attendance is harder to do on an ongoing basis in a reliable way. In India, all measurement of school attendance (including ASER) has noted huge variations in school attendance across states - ranging from $90 \%$ on a random day in schools in south India to close to $50 \%$ in schools in some northern states. School-based assessments of student learning will leave out non-attending children. It is possible that such children have lower learning levels.
- Children currently not enrolled in school: Although the proportion of children in India who are currently not enrolled in school is relatively small in India these days, they too need to be accounted for when we look at a representative sample of all children. Those who are currently not enrolled in school include two types of children: those who have never been enrolled and those who were in school but have dropped out. Children leave school for a variety of reasons. One of those reasons is not being able to cope with school. Often the disengagement with school begins with not attending and eventually it leads to dropping out. This is more common among older children. Data about such children (those who were never enrolled and those who have dropped out) and their learning levels can provide a lot of information about what needs to be done to design "second chance" programs to help them return to the education system. Doing a school-based assessment will exclude these children.
- Children attend different types of schools: In India, for example, children are enrolled in different types of government schools and a wide range of private schools - many of which are not recognised by the government ${ }^{11}$ and hence may or may not be included in official lists. Nationally, in rural India, the proportion of children of elementary school age who go to private schools is close to $30 \%$ and rising each year. This proportion varies from $5 \%$ to $60 \%$ in different states. A school-based assessment would not include children enrolled in the vast majority of unlisted private schools (especially low-cost schools). By not including such children we would be leaving out increasing proportions of school-going children. In addition, a household survey is independent of government permissions, etc. and thus, it is free of any hurdles and easier to be executed by citizens.

A representative sample of ALL children must be drawn from ALL children (i.e. children enrolled in government schools, children enrolled in private and other schools, children not currently enrolled in school and children who do not attend school regularly). Therefore, in contexts such as India, to get a representative sample of ALL children, drawing a sample based on household surveys and subsequently administering the assessments in the household is the only possible option. For these reasons it was decided that ASER would be a household survey. Globally, ASER is perhaps one of the largest assessments of learning done outside the school.

## Ensuring citizen participation in ASER: Using volunteers

In contexts where a large proportion of parents may not have been to school, people often do not have a clear or practical understanding of what 'learning' entails. This is further compounded by several other factors. First, typically inputs, access and provisions are measured but outcomes are not. Second, often the practice of using empirical evidence to understand current status and to inform further action is rare. Third, learning goals are not clearly articulated or publicised. These factors strengthen the common assumption that if children are in school, they must be learning.

[^19]Since 'schooling for all' was well understood by policymakers, planners, practitioners and parents even in 2005, it was time to shift the focus to 'learning for all'. We felt that one important way to achieve wider awareness about the issue of learning would be through the participation of a broad-based cross-section of people around the country. Widespread involvement of local citizens in conducting the assessment in each district in India was therefore crucial to the architecture of ASER. But this had important implications for several aspects of ASER's design and implementation:

- Simplicity of the assessment tool and administration protocol: Widespread participation of citizens in almost 600 districts implied a massive scale for training and implementation. Therefore the process needed to be relatively straightforward in terms of actual testing of children (process as well as time taken for each child and each subject) as well as the time required to complete a sampled village. The assessment tools and administration protocol have been designed keeping in mind the fact that ASER is a household survey. There are constraints to what can be assessed in the community or in the household.
- Volunteer model: Large-scale participation has important cost implications. More than 25,000 volunteers participate in ASER each year. Volunteers usually come from ASER partner organisations in each rural district of India; these organisations are usually universities, colleges, NGOs or self-help groups but could also be other kinds of formal and informal organisations. They are trained, mentored and monitored by around 1,000 Master Trainers. ASER volunteers reach 600,000 to 700,000 children annually in 15,000 to 16,000 villages. They are remunerated only for travel and other actual costs. Hence the ASER survey is truly a citizen-led initiative. Training for ASER takes 2-3 days. During training, one day is spent in actually practicing elements of the survey process and the testing of children in nearby communities. The actual ASER survey is conducted over two days with a pair of surveyors assigned to one sampled village. This is usually done over a weekend.
- Stringent quality control: The ASER process in the field has several layers of measures for ensuring quality control. During the actual field survey, the Master Trainers monitor the work of surveyors by visiting villages on the days of the survey. After village data collection is completed, the survey sheets are subjected to a thorough desk review including phone calls to randomly selected households to cross-check that the survey was actually done. After the survey is completed, the Master Trainers visit a minimum of 4 to 8 villages in each district to do a field recheck. ASER Centre also carries out an "external" recheck across states. All of this information from the monitoring and recheck process is used to decide if any villages need to be resurveyed or dropped from the data set for not meeting quality standards.

To summarise, the ASER approach differs in fundamental ways from that of other large-scale learning assessments. The guiding principles of the model can be summarised as 1) household-based assessment, so as to include ALL children - those in government schools, private schools, and not in school; 2) assessment of children's mastery of basic reading and arithmetic, rather than grade level competencies, using tools that are simple to administer and easy to understand; 3 ) involvement of 'ordinary people', rather than experts, in conducting the assessment and disseminating the results; and 4) generation of estimates at district, state, and national levels, so as to facilitate local level discussions, planning and action.

## Taking stock

The landscape for elementary education in India, especially at the policy level, has changed considerably in the last ten years. The Right to Education Act that came into effect in 2010 firmly establishes norms for inputs and infrastructure. The Twelfth Five Year Plan document that was finalised in late December 2012 outlines the need to focus on learning outcomes in elementary school years and why assessment and measurement are critical to understanding what needs to be done. The UPA government in its last years and the new BJP government have both stressed the importance of building solid foundations in the early grades (especially in Std 1 and 2). While the RTE focuses primarily on schooling, other policy statements from the government (at central and state levels) suggest that India is beginning to look beyond schooling to issues of learning.
On the assessment front, in the last two years almost all states have carried out state-wide large scale assessments of children's learning. The national surveys of student achievement are also improving in technical terms. It is fair to say that awareness and acceptance of the "learning crisis" in the Indian school system is now widespread both within the government and outside. It is also clear that the fundamental and critical importance of
"reading" as a skill is acknowledged. Many state governments are carrying out learning improvement programs for students in primary and upper primary grades.

We would like to believe that ASER contributed significantly to these changes in the fabric of education policy and practice in India.

## Overview of the ASER survey process

The ASER survey in a village is completed in two days by a team of two volunteers. The first day of the survey is a school day (mostly Saturday) and the second a holiday (mostly Sunday).

The following is a step-wise overview of the survey process.
A team of two surveyors goes to the assigned village. Once in the village, the surveyors meet the village head (sarpanch) and do the following:

- Explain what ASER is.
- Give the village head the 'Letter for the Sarpanch' and ask him/her for permission to survey the village. The letter briefly describes the what, how and why of ASER.

The surveyors walk around the village and do the following:

- Make a map of the village in consultation with local residents, and clearly indicate important landmarks and the pattern of habitations on the map. (refer to page 37 for a sample).
- Fill up the Village Information Sheet based on their observations. The Village Information Sheet captures the availability of basic facilities such as schools, banks etc. in the village (refer to pages 38 and 39 for a sample).

The surveyors go to the government school (the Std. 1-7/8 school having highest enrollment, if available, else the government primary school (Std. 1-4/5) having the highest enrollment) in the village and do the following:

- Meet the Head Master or the senior-most teacher, and explain to him/her what ASER is.
- Give him/her the 'Letter for the Head Master' and ask him/her for permission to make observations in the school. The letter briefly explains what ASER is and the objective of the school observation part of the survey.
- Collect information about the school and record it in the School Observation Sheet, which contains questions to capture the implementation of RTE norms and other indicators in the school (refer to pages 42-45 for a sample).

The surveyors randomly select 20 households to survey. They do the following:

- Divide the map into 4 sections in case of a continuous village, or randomly select 4 hamlets in case of a discontinuous village having discontiguous hamlets.
- Select 5 households from each hamlet/section using the 'every 5th household rule'. Therefore a total of 20 households in the village are surveyed.

In each sampled household, the surveyors do the following:

- Record information about the enrollment of children in the age group of 3-16 years, including the type of schools the children attend.
- Assess the basic reading, arithmetic and English levels of children in the age group of 5-16 years using the ASER testing tools.
- Record information about household assets. (Refer to pages 40 and 41 for a sample household survey sheet.)

After all 20 households are surveyed, the surveyors fill up the Village Compilation Sheet and submit the completed survey booklet to the ASER Master Trainer.

## What to do in a village?

The following pages contain standardised step-wise instructions for doing the ASER survey. ASER surveyors are given a manual containing these instructions and are trained on the procedures outlined below.
Objective: To map the village to facilitate random selection of households, and to collect basic information about the village.
Refer to page 37 for a sample village map and pages 38-39 for sample Village Information Sheets. Refer to page 313 for information on sampling.
Information about 20 households, randomly selected from the entire village, is to be collected. A map of the village is made to facilitate this process. To begin mapping the village, walk around the village and talk to the villagers.

- Understand the location of different hamlets/sections and important landmarks in the village.
- As you walk around the village, fill out the Village Information Sheet. Mark 'yes' or 'no' for each facility listed, based on your observations.

## How to draw the map?

- Rough map: Make a rough map to show the pattern of habitations in the village. Use the help of local people to identify landmarks - temples, mosques, rivers, schools, bus stops, panchayat bhavans, shops etc. - and indicate them on the map. Mark the main roads/streets/paths in the village prominently on the map.
- Final map: Once everyone agrees that the rough map is a good representation of the village, and it matches your experience of walking around the village, copy it on to the map sheet given to you in the survey booklet.

## How to mark and number hamlets/sections on your map?

## 1. Continuous village

## If the village has continuous habitations:

- Divide the entire village into 4 sections geographically.
- Assign each section a number. Write the number on the map. (See the example to the left.)
- Select 5 households from each section. (The procedure for household selection is explained in the next section.)

## 2. Village with hamlets/sections

If the village has discontiguous hamlets/sections:

- Assign each hamlet/section a number. Write the number on the map.

If the village has:

- $\mathbf{2}$ Hamlets/Sections: Divide each hamlet/section into 2 parts and select 5 households from each part.
- 3 Hamlets/Sections: Select 7, 7 and 6 households from each of the 3 hamlets/sections respectively.
- 4 Hamlets/Sections: Select 5 households from each hamlet/section.
- More than 4 Hamlets/Sections: Randomly pick 4 hamlets/sections and then select 5 households from each hamlet/section. On the map, tick the hamlets/sections chosen for the survey. (See the example to the right.)

## What to do in each hamlet/section?

Objective: To randomly sample households from each hamlet/section by applying household selection rules.
Use the following procedure to select 5 households from each of the 4 hamlets/sections in the village.

- Go to the central point of the first hamlet/section.
- Survey the first household to your left. After surveying this household, skip the next 4 households and survey the 5th one. While selecting households, count only those dwellings that are residential. Count every door or entrance to a house from the street as a household.
- If you reach the end of the hamlet/section before 5 households are sampled, go around again using the same 'every $5^{\text {th }}$ household rule'. If a surveyed household gets selected again, then go to the next/adjacent household. Continue until you have 5 households from the hamlet/section. (Refer to page 48 for a visual representation of the 'every 5th household rule'.)
- If the hamlet/section has less than 5 households, then survey all the households in the hamlet/section and survey the remaining households from other hamlets/sections.

## What to do in case of

1. Households with multiple kitchens: In each house, ask how many kitchens or chulhas there are. If there is more than one kitchen in a household, select the kitchen from which the respondent's ${ }^{1}$ family eats. Survey only those individuals who regularly eat from the selected kitchen. After completing the survey in this house, proceed to the next house using the 'every $5^{\text {th }}$ household rule' (counting from the next house on the street, not from the next kitchen/chulha).
2. Households with no children: If there are no children in the age group of $3-16$ years in the selected household but there are inhabitants, include that household in the survey. Note down information about the name of the head of the household, total number of members in the household, household assets, name of the respondent and mobile number of the household. Write the number/name of the hamlet/section (as indicated on the map) from which the house has been selected. Also record whether anyone in the household has passed Std. 12 and whether anyone knows how to use a computer. Such a household is counted as one of the five surveyed households in each hamlet/section but no information about mothers or fathers need be collected.
3. Closed houses: If the selected house is locked or if no adult respondent is available, note that down on your Village Compilation Sheet (at the end of the survey booklet). This household does not count as a surveyed household. Do not record this household's information in the survey sheet. Move to the next/adjacent house.
4. No response: If a household refuses to participate in the survey, record that household on your Village Compilation Sheet in the 'no response' box. This household also does not count as a surveyed household. Do not record this household's information in the survey sheet. Move to the next/ adjacent house.

- Stop after you survey 5 households in the hamlet/section. Now move to the next selected hamlet/section. Follow the 'every 5th household rule' again to select 5 households in this hamlet/section. In this manner, survey 5 households from each of the 4 hamlets/sections and therefore survey a total of 20 households in the village.
- If the village has less than 20 households, then survey all the households in the village.
- Ensure that you go to households only when children are likely to be at home: after school hours and/or on a holiday/Sunday.

## How to sample households in a hamlet?

What to do in a house with multiple kitchens?

## What to do in each household?

Objective: To record basic information about the children and adults living in a household in the household survey sheet.
Refer to pages 40-41 for sample household survey sheets.
While surveying households, be polite. Often a lot of people gather around and want to know what is going on. Explain what you are doing and why. Tell them about ASER. Note down information in the household survey sheet as described below for each of the 20 sampled households. Use one household survey sheet per household.

## 1. General information

- Household (HH) Number: Write down the household number in every household survey sheet. Write ' 1 ' for the first household surveyed, '2' for the second household surveyed and so on until ' $20^{\prime}$ '.
- Total number of members in the HH who eat from the respondent's kitchen: Ask the respondent and write down the total number. If there are multiple kitchens/chulhas in the household, remember to include only those members who eat regularly from the respondent's kitchen.

## - Note down the following:

o Respondent's name: Respondent is an adult who is present in the household during the survey and provides you with information.
o Hamlet/Section no. (from the map) and/or name of hamlet/section from which the household is selected.

## 2. Information about children and adults living in the household

In the household survey sheet, note down information only about individuals who regularly live in the sampled household and eat from that household's kitchen.
Collect information from the sampled household about all children aged 3-16 years who regularly live in the household and eat from that household's kitchen. Ask the members of the household to help you identify these children. All such children should be included in the survey, even if their parents live in another village or if they are the children of the domestic help in the household.

## What to do in case of

1. Older children: Often older girls and boys (in the age group of 11 to 16 years) may not be thought of as children. Avoid saying 'children'. Probe about who all live in the household to make sure that nobody in the age group of 3-16 years gets left out of the survey. Often older children are shy and hesitant to be tested. Be sensitive about this issue.
2. Children who are not at home during the time of the survey: If there are children who regularly live in the household but are not at home during the time of the survey, include them in the survey and note down their information in the household survey sheet. If possible, ask family members to send for such children so that you can test them. If the children do not come immediately, make a note of that household and revisit it after surveying the other households. If there are children who regularly live in the household but are out of the village on the day of the survey, for e.g. children visiting relatives, write down their information even if you cannot test them.
3. Children who are relatives but live in the sampled household on a regular basis: INCLUDE these children because they live in the household on a regular basis. But do not note down information about their parents if they do not live in this household.
4. Children who do not live in the household on a regular basis: DO NOT INCLUDE children who do not regularly live in the household, even if they belong to the respondent's family, for e.g. children who are studying in another village or children who got married and are living elsewhere.
5. Visiting children: DO NOT INCLUDE children who have come to visit their relatives or friends in the sampled household as they do not regularly live in the sampled household.

Mother's background information: At the beginning of the entry for each child, ask for the name of the child's mother. Note down her name only if she is alive and regularly living in the household. If the child's mother is dead or not living in the household, do not write her name. If the mother has died or is divorced, and the child's stepmother (father's present wife) is living in the household, include the stepmother as the child's mother. Note down the mother's age and schooling information in the box 'Mother's Background Information'.

## Children:

After identifying which children to survey, collect the following information for each sampled child. Remember, one row of the household survey sheet is to be used for each child.

- Child's name, age, sex: The child's name, age and sex is to be filled for all children selected for the survey. For female children write ' F ' and for male children write ' M '.
- Children aged 3-6 years: The first block, 'Pre-school children (Age 3-6)', is to be filled up only for children aged 3 to 6 years. On the household survey sheet, note down whether such children are attending an Anganwadi (ICDS), Balwadi, nursery/LKG/UKG, etc. If the child is not going to any Anganwadi, pre-school, etc., put a tick under 'Not going', under the section 'Pre-school children (Age 3-6)'.
- Children aged 5-16 years: The remaining blocks of information are to be filled ONLY for children aged 5-16 years.
For in-school children (currently enrolled in school): Note down the child's current schooling status and Std. If the child goes to pre-school, use the following terms to fill up the 'Std.' column:
'NUR' for nursery, 'LKG' for LKG, 'UKG' for UKG, 'AW' for Anganwadi, 'BW' for Balwadi.

## For out-of-school children (who are currently not enrolled in school):

- If the child has never been enrolled in school, put a tick under 'Never enrolled'.
o If the child has dropped out of school, put a tick under 'Drop out'.
Note the Std. in which the child was studying when she dropped out, irrespective of whether she passed or failed that Std. Probe carefully to find out these details.

Also note the actual year when the child left school. For example, if the child dropped out in 2007, write '2007'.

## For all children (aged 5-16 years):

o Ask the respondent if each of the sampled children aged 5-16 years attends tuition (meaning paid classes outside school). If yes, ask how much the parents pay for each child's tuition per month.

If the respondent cannot tell you the payment made per month, leave the box blank.
If a child takes more than one paid tuition class, then add the payment for all the classes (per month) and write the total amount paid for the child's tuition classes per month.
o Also ask whether each child attends the specific government school which you have surveyed or will survey. Do not ask this question for children who are not currently enrolled in school.

- All children in this age group are to be tested in basic reading, arithmetic and English. Irrespective of the children's age, follow the same testing procedure for all children so as to keep the process uniform.

Father's background information: Ask for the age and schooling information of the child's father. Note down this information only if the father is alive and regularly living in the household. If the father is dead or not living in the household, do not ask for this information. If the father has died or is divorced, and the child's stepfather (mother's present husband) is living in the household, include the stepfather as the child's father.

## 3. Household indicators

All information on household indicators is to be recorded, based as much as possible, on observation. However, if for some reason you cannot make observations, note down what is reported by household members only and not by others. In case of assets such as TV and mobile phone, ask whether it is there in the household and whether it is owned by the household. This information is collected in order to link children's learning levels to the household's economic conditions.

- Type of house the child lives in: Types of houses are categorised as follows:
o Pucca House: A pucca house is one which has walls and roof made of the following material:
- Wall material: Burnt bricks, stones (packed with lime or cement), cement concrete, timber, ekra etc.
- Roof Material: Tiles, GCI (Galvanised Corrugated Iron) sheets, asbestos cement sheet, RBC (Reinforced Brick Concrete), RCC (Reinforced Cement Concrete), timber etc.
o Kutcha House: The walls and roof are made of material other than those mentioned above, like unburnt bricks, bamboos, mud, grass, reeds, thatch, loosely packed stones, etc.
o Semi-Kutcha house: A house that has fixed walls made up of pucca material and roof made up of material other than those used for pucca houses.
- Motorised 2-wheeler: Ask the respondent and mark 'yes' if the household owns a motorised 2-wheeler such as a motorcycle or scooter, otherwise mark 'no'.
- Electricity in the household:
o Mark 'yes' or 'no' by observing if the household has wires, electric meters and fittings, bulbs etc.
- If there is an electricity connection, ask whether the household has had electricity any time on the day of your visit (not necessarily while you are there). Mark 'yes' or 'no' accordingly.
- Toilet: Mark 'yes' or 'no' by observing if there is a constructed toilet in the house. If you are not able to observe, then ask.
- Television: Mark 'yes' or 'no' by observing if the household has a television. If you are not able to observe, then ask. It does not matter whether the television is in working condition.
- Cable TV: If there is a TV in the household, ask whether there is cable TV. This includes any cable facility which is paid for by the household (include Direct To Home (DTH) facility). Mark 'yes' if there is cable. If not, mark 'no'.
- Reading material
o Newspaper: Mark 'yes' if the household subscribes to a daily newspaper, otherwise mark 'no'.
o Other reading material: This includes story books, magazines, religious books, comics etc. but does not include calendars and school textbooks. If the aforementioned reading material is available, mark 'yes', otherwise mark 'no'.
- Other questions for the household:
o Mark 'yes' under the corresponding question if anyone (apart from the mother(s) and father(s) whose background information has already been recorded earlier) in the household has completed Std.12, otherwise mark 'no'.
o Mark 'yes' under the corresponding question if anyone in the household knows how to use a computer, otherwise mark 'no'.
o If the household has a mobile phone, mark 'yes' under the corresponding question and note the mobile number in the next column, otherwise mark 'no'. Please tell the household members that the mobile number of the household is collected only for the purpose of recheck and shall not be used for any other purpose.
If you do not get an answer for a question in the household survey sheet, leave the corresponding column blank.

Remember to thank households for their participation.

## ASER 2014 - Reading tasks

All children were assessed using a simple reading tool. The reading test has 4 sections:

- Letters: Set of commonly used letters.
- Words: Common, familiar words with 2 letters and 1 or 2 matras.
- Level 1 (Std 1 ) text: Set of 4 simple linked sentences, each having no more than 6 words. These words (or their equivalent) are in the Std 1 textbooks of the states.
- Level 2 (Std 2) text: Short story with 7-10 sentences. Sentence construction is straightforward, words are common and the context is familiar to children. These words (or their equivalent) are in the Std 2 textbooks of the states.

While developing these tools in each regional language, care is taken to ensure

- Comparability with previous years' tools with respect to word count, sentence count, type of words and conjoint letters in words.
- Compatibility with the vocabulary and sentence construction used in Std 1 and Std 2 language textbooks of the states.
- Familiarity of words and context, established through extensive field piloting.

## How to test reading?

## PARAGRAPH

Show the child the 2 paragraphs in the testing tool. Ask her to read either of the 2 paragraphs. Let her choose the paragraph herself. If she does not choose, give her any one paragraph to read. Listen carefully to how she reads.

The child is not at the 'Paragraph' level if she:

- Reads the text like a string of words, rather than a sentence.
- Reads the text haltingly and stops often.
- Makes more than 3 mistakes in reading the text.

If the child is not at the 'Paragraph' level then ask her to read the words.

## WORDS

Ask the child to read any 5 words from the word list.
Let her choose the words herself. If she does not choose, then point out any 5 words to her.
The child is at the 'Word' level if she reads at least 4 out of the 5 words with ease.

#### Abstract

If the child is at the 'Word' level, then ask her to read the paragraph again and then follow the instructions for paragraph level testing. If the child can correctly and comfortably read at least 4 out of 5 words but is still struggling to read the paragraph, then mark her at the 'Word' level. If the child is not at the 'Word' level (cannot correctly read at least 4 out of the 5 words chosen), then show her the list of letters.

The child is at the 'Paragraph' level if she:

- Reads the text like she is reading sentences, rather than a string of words.
- Reads the text fluently and with ease, even if she reads slowly.
- Reads the text with $\mathbf{3}$ or fewer than $\mathbf{3}$ mistakes.

If the child is able to read the paragraph, then ask
her to read the story. her to read the story.

STORY
Ask the child to read the story.
The child is at the 'Story' level if she:

- Reads the text like she is reading sentences, rather than a string of words.
- Reads the text fluently and with ease, even if she reads slowly.
- Reads the text with $\mathbf{3}$ or fewer than $\mathbf{3}$ mistakes.

If the child can read the story, then mark her at the 'Story' level.
If the child is not at the 'Story' level, then mark her at the 'Paragraph' level.

## LETTERS

Ask the child to recognise any 5 letters from the letter list.
Let her choose the letters herself. If she does not choose, then point out any 5 letters to her.
The child is at the 'Letter' level if she correctly recognises at least $\mathbf{4}$ out of $\mathbf{5}$ letters with ease.
If the child is at the 'Letter' level, then ask her to read the words again and then follow the instructions for word level testing.
If the child can recognise at least 4 out of 5 letters but cannot comfortably read the words, then mark her at the 'Letter' level.
If the child is not at the 'Letter' level (cannot recognise at least 4 out of 5 letters chosen), then mark her at the
'Beginner' level.

## ASER 2014 - Arithmetic tasks

All children were assessed using a simple arithmetic tool. The arithmetic test has 4 categories:

- Number recognition 1 to 9: Randomly chosen numbers from 1 to 9.
- Number recognition 10 to 99: Randomly chosen numbers from 10 to 99.
- Subtraction: 2 digit numerical subtraction problems with borrowing.
- Division: 3 digit by 1 digit numerical division problems.

## How to test arithmetic?

## SUBTRACTION 2 digit with borrowing

The child is required to solve 2 subtraction problems. Show her the subtraction problems. Ask her to choose a problem. If she does not choose, point out any one problem to her.
Ask her what the numbers are, then ask her to identify the subtraction sign.
If she is able to identify the numbers and the sign correctly, ask her to write and solve the problem. If the solution is incorrect, give her another chance to solve the problem.
Irrespective of whether the first subtraction problem is answered correctly, ask her to choose and attempt the second problem following the same testing procedure.

If the child cannot do both subtraction problems correctly, then ask her to identify the numbers from 10 to 99.
Even if the child does only one subtraction problem wrong, give her the number recognition (10-99) task.

## NUMBER RECOGNITION (10-99)

Ask the child to identify any 5 numbers from the list. Let her choose the numbers herself. If she does not choose, then point out any 5 numbers to her. If she correctly identifies at least 4 out of 5 numbers, then mark her at the 'Number Recognition (1099)' level.

If the child is not at the 'Number Recognition (1099)' level (cannot correctly identify at least 4 out of 5 numbers chosen), then ask her to identify numbers from 1 to 9 .

## NUMBER RECOGNITION (1-9)

Ask the child to identify any 5 numbers from the list. Let her choose the numbers herself. If she does not choose, then point out any 5 numbers to her. If she correctly identifies at least 4 out of 5 numbers, then mark her at the 'Number Recognition (1-9)' level.
If the child is not at the 'Number Recognition (19)' level (cannot identify at least 4 out of 5 numbers chosen), then mark her at the 'Beginner' level.

If the child does both the subtraction problems correctly, ask her to do a division problem.

## DIVISION 3 digit by 1 digit

The child is required to solve 1 division problem. Show her the division problems and ask her to choose one. If she does not choose, point out any one problem to her.
Ask her to write and solve the problem.
If she solves the problem and calculates both the quotient and remainder correctly, then mark her at the 'Division' level.
If she makes a mistake, give her another chance to attempt the same problem.

If the child is unable to solve the division problem correctly, mark her at the 'Subtraction' level.

> THE CHILD MUST SOLVE THE ARITHMETIC PROBLEMS AT THE BACK OF THE HOUSEHOLD SURVEY SHEET.

## ASER 2014 - English tasks

All children were assessed in English reading and comprehension using a simple tool. The test has 4 categories:

- Capital letters: Set of commonly used capital letters.
- Small letters: Set of commonly used small letters.
- Words: Common, familiar 3 letter words. After reading, the child is asked for meaning of the read words in her local language.
- Simple sentences: Set of 4 simple sentences, each having no more than 4-5 words. These words (or their equivalent) are in the introductory English textbooks of the states. After reading, the child is asked to say the meaning of the read sentences in her local language.

While developing these tools in English, care is taken to ensure

- Comparability with the previous years' tools with respect to word count, sentence count and type of words.
- Compatibility with the vocabulary and sentence construction used in the introductory English textbooks of the states.
- Familiarity of words and context, established through extensive field piloting.
- Ease of communicating meanings of words in all regional languages.

## How to test English?

There are 2 parts in the English testing process: Reading and Meaning.

- First administer the reading test and mark the highest reading level of the child.
- Then administer the meaning test. This is only for children who are marked at the 'Word' or 'Sentence' levels in the English reading test.

## PART 1: READING

## CAPITAL LETTERS

 she does not choose, then point out any 5 letters to her.The child is not at the 'Capital Letter' level if she cannot recognise at least $\mathbf{4}$ out of the $\mathbf{5}$ letters.

If the child is not at the 'Capital Letter' level (cannot recognise at least 4 out of the 5 letters chosen), then mark her at the 'Beginner' level.

The child is at the 'Capital Letter' level if she correctly recognises at least $\mathbf{4}$ out of the $\mathbf{5}$ letters with ease.

If the child is at the 'Capital Letter' level, then ask her to recognise the small letters.

## SMALL LETTERS

Ask the child to recognise any 5 small letters from the small letter list. Let her choose the letters herself. If she does not choose, then point out any 5 letters to her.

The child is not at the 'Small Letter' level if she cannot recognise at least $\mathbf{4}$ out of $\mathbf{5}$ letters.

If the child is not at the 'Small Letter' level (cannot reconise at least 4 out of the 5 letters chosen), then mark her at the 'Capital Letter' level.

The child is at the 'Small Letter' level if she correctly recognises at least $\mathbf{4}$ out of $\mathbf{5}$ letters with ease.

If the child is at the 'Small Letter' level, then ask her to read the words.

## SIMPLE WORDS

Ask the child to read any 5 words from the word list. Let her choose the words herself. If she does not choose, then point out any 5 words to her.

The child is not at the 'Word' level if she cannot read at least $\mathbf{4}$ out of 5 words.

If the child is not at the 'Word' level (cannot read at least 4 out of the 5 words chosen), then mark her at the 'Small Letter' level.

The child is at the 'Word' level if she correctly reads at least $\mathbf{4}$ out of $\mathbf{5}$ words with ease.

If the child is at the 'Word' level, then ask her to read the sentences.

## EASY SENTENCES

Ask the child to read all 4 of the given sentences.

The child is not at the 'Sentence' level if she:

- Cannot read at least $\mathbf{2}$ out of $\mathbf{4}$ sentences fluently.
- Reads the sentences like a string of words, rather than a sentence.
- Reads the sentences haltingly or stops very often.

If the child is not at the 'Sentence' level, then mark her at the 'Word' level
AND
Ask her to tell you the meaning of the words she has read correctly, as described below.

The child is at the 'Sentence' level if she:

- Reads at least $\mathbf{2}$ out of the $\mathbf{4}$ sentences fluently.
- Reads the sentence like a sentence and not a string of words.
- Reads the sentence fluently and with ease, even if she reads slowly.

If the child is at the 'Sentence' level, then mark her at the 'Sentence' level
AND
Ask her to tell you the meaning of the sentences she has read correctly, as described below.

## PART 2 : MEANING

## For WORD LEVEL CHILDREN

## WORD MEANINGS

Ask the child to tell you the meaning of the words she has read correctly, in her local language.

The child knows the meaning of the words if she correctly tells you the meaning of at least 4 of the read words. She can tell you the meaning of the words by:

- Saying the correct meaning in her local language OR
- Pointing to an object to explain the meaning of the word, for eg., pointing to her father to explain the meaning of 'man' or pointing to something red to explain the meaning of 'red'.

If the child can correctly tell you the meaning of at least 4 of the words, then mark under 'Can say' in the 'Word Meaning' column.
If the child cannot correctly tell you the meaning of at least 4 of the words, then mark under 'Cannot say' in the 'Word Meaning' column.

For SENTENCE LEVEL CHILDREN

The child knows the meaning of the sentences if she correctly tells you the meaning of at least 2 of the read sentences. She can tell you the meaning of the sentences by:

- Saying the correct meaning in her local language OR
- Explaining the meaning of at least the main underlined words in the sentence. For eg., for the sentence 'What is the time?', she is at least able to say 'kya/kitna' and 'samay/waqt'.
Note: Do not ask the meaning of the main underlined words by pointing at them.

If the child can correctly tell you the meaning of at least 2 of the sentences, then mark under 'Can say' in the 'Sentence Meaning' column.
If the child cannot tell you the meaning of at least 2 of the sentences, then mark under 'Cannot say' in the 'Sentence Meaning' column.

Note: If the child is marked at the 'Word' level, then ask her for only word meanings.
If the child is marked at the 'Sentence' level, then ask her for only sentence meanings.

## What to do in a school?

Objective: To record information about children's enrollment and attendance, teachers' appointment and attendance, school facilities, grants etc.

Refer to pages 42-45 for a sample School Observation Sheet.

## General instructions

- Visit a Std. 1 to $7 / 8$ government school in the village. If there is no such school in the village, then visit a Std. 1 to $4 / 5$ government school. If there is more than one Std. 1 to $4 / 5$ government school, choose the school with the highest total enrollment of children. If there is no school for at least Stds. 1 to $4 / 5$ in the village, do not visit any school. In the top left box of the School Observation Sheet, tick according to the school type.
- Meet the Head Master (HM). If the HM is not present, meet the senior-most teacher. Explain the purpose and importance of ASER to the respondent and give him/her the 'Letter for the Headmaster'. Be very polite. Assure the respondent and teachers that the name of the school would not be shared with anybody.
- Ask the respondent for his/her phone number for the purpose of recheck.
- Note the time of entry, date and day of visit to the school.
- Ask the respondent for the enrollment register or any official document for the enrollment figures in that school.

## 1. Children's enrollment \& attendance

- Ask for the enrollment registers of all the standards and use them to fill up enrollment information. If a standard/class has many sections, then note the total enrollment for that class.
- Go to the classrooms/areas where children are seated and note down their attendance information class-wise by counting the children yourself. Children are often found seated in mixed groups. You may need to seek the teachers' help to distinguish children class-wise. Ask children from each Std. to raise their hands. Count the number of raised hands and accordingly fill up the attendance information in the observation sheet, classwise. Please note that only children who are physically present in the class while you are counting should be included.
- Attendance in classes with many sections: Take a headcount of the individual sections, add them up and write down the total attendance for that class.

## 2. Official medium of instruction in the school

- Note down the official language used as the medium of instruction.
- If the school has more than one official medium of instruction, note all of them in the box provided.

## 3. Teachers

- Ask the respondent and note down the number of teachers appointed. Acting HM counts as a regular teacher. HM on deputation in the surveyed school counts as an HM. The number of regular government teachers does not include the HM.
- Observe how many HMs/teachers are present and note down the number.
- If the school has para-teachers, record their number separately. (Definition of a para-teacher: A para-teacher is a contract teacher with a pay scale different from that of a regular teacher). In many states para-teachers are called by different names such as Shiksha Mitra, Panchayat Shikshak, Vidya Volunteer etc.
- Do not count NGO volunteers as teachers.

## 4. Classroom observations

This section is for Std. $\mathbf{2}$ and Std. $\mathbf{4}$ only. If there is more than one section for a standard, then randomly choose one to observe. You may need to seek teachers' help to distinguish children class-wise as children from more than one class may be seated together.

## Observe the following and fill accordingly.

- Seating arrangement of children: Are two or more classes sitting together in the same classroom or is a single class sitting separately?
- Is there a blackboard where the children are sitting? If yes, could you write on it easily?
- Were any teaching material other than textbooks available, like charts on the wall, board games etc.? Material painted on the walls of the classroom is not considered teaching material.
- Where are children sitting (in the classroom, in the verandah or outside)?

## 5. Mid-Day Meal (MDM)

- Ask the respondent whether the mid-day meal was served in the school on the day of the survey.
- Observe if there is a kitchen/shed for cooking the mid-day meal.
- Observe if any food is being cooked in the school.
- Observe whether the mid-day meal was served in the school today (Look for evidence, such as dirty utensils). Mark accordingly.

## 6. Facilities observation

Observe whether each of the listed facilities is available in the school and accordingly mark your answers for each corresponding question.

- Observe and count the total number of pucca rooms (excluding toilets). Also observe and count the total number of pucca rooms used for teaching on the day of the survey.
- Observe if there is an office or store or office-cum-store. Tick under 'Yes' if at least one is present.
- Observe if there is a playground. (Definition of a playground: An area within the school premises with a level playing field and/or school playing equipment like slides, swings etc.)
- Observe if there are library books in the school (even if kept in a cupboard). If yes, observe if children are using these books at the time of the survey.
- Observe if there is a handpump/tap. If yes, check whether you could drink water from it. If there is no handpump/tap or you could not drink water from it, check whether drinking water is available in any other form.
- Observe if the school has a complete boundary wall or complete fencing (with or without a gate).
- Observe if there are computers in the school for the children's use. If yes, observe if children are using the computers at the time of the survey.

## 7. Toilets

- Observe whether the school has a common toilet, a separate toilet for girls, a separate toilet for boys and a separate toilet for teachers.
- Ask the HM, any teacher or any child if you cannot tell who the toilets are for.
- For each type of toilet facility that you find at the school, note whether it is locked or not. If it is unlocked, note whether it is usable or not. A usable toilet is a toilet with water available for use (running water/stored water) and a basic level of cleanliness.
- If the school has more than one toilet in any category, then record information about the toilet that is in better condition for that category.

## 8. Continuous and Comprehensive Evaluation (CCE)

- Ask the respondent if he/she has heard about CCE.
- If he/she has not heard about CCE, then do not ask the next question and proceed to Section 9 .
- If he/she has heard about CCE, then ask how many teachers have received a CCE manual/format.
- If CCE manual/format has been received, ask the respondent to show you the CCE manual/format and tick accordingly.

## 9. School Management Committee (SMC)

- Ask the respondent if currently there is an SMC for the school.
- If there is an SMC for the school, then ask when the last meeting of the SMC was held.
- Ask how many members attended the last meeting of the SMC.

## 10. School Development Plan (SDP)

- Irrespective of the answers to the SMC question, ask whether a School Development Plan (SDP) was made for the school in 2013-14.
- If yes, ask the respondent to show you the SDP and tick accordingly. Do not include the DISE format as an SDP.

## 11. School Grant Information (Sarva Shiksha Abhiyan (SSA) Grants)

Assure the HM and others that the name of the school will not be shared with anybody.

- The information for this section should be taken from the HM. In the absence of the HM, ask the senior most teacher present. Tick the designation of the person who is asked for grants information (HM/Regular teacher/ Para-teacher).
- In case of schools with classes from 1 to $7 / 8$, there may be separate Head Masters and separate SSA passbooks for the primary and upper-primary sections. Ask whether the school has two or more SSA passbooks and tick the appropriate box (Yes/No/Don't know).

## 12A. SSA Annual School Grant

Ask the respondent about the grants very politely. If he/she refuses to answer or is hesitant to answer this section, do not force him/her and move on to Section 12B.

If the school has two or more SSA passbooks, collect information pertaining to the primary section (Std. 1 to 4 / 5) only.

Ask for information about four SSA grants - School Maintenance Grant (SMG), School Grant or School Development Grant (SDG), Teacher Grant or Teacher Learning Material (TLM) and New Classroom Grant. For each grant, information for two separate time periods is required: Financial Year 2013-14 (1st April 2013 to 31st March 2014) and Financial Year 2014-15 (1st April 2014 till date of survey).

- For each grant, first ask if the school received the grant for 2013-14 (April 2013 to March 2014). Mark the answer under the appropriate column (Yes/No/Don't know).
- If yes (the school received the grant), ask if the full amount was spent, and mark the answer as follows.
o Mark 'Yes' only if the full amount was spent.
o Mark 'No' if nothing was spent or less than the full amount was spent.
o Mark 'Don't know' if the respondent is not aware whether the full amount was spent.
- Now ask the same questions for the remaining three grants.

Once you have asked about all four grants for Financial Year 2013-14, repeat this entire process for the period
$1^{\text {tt }}$ April 2014 till the date of the survey.

## 12B. Activities carried out in school (since April 2013)

The activities are categorised into construction, repair and purchase.
Ask if each of the listed activities has been undertaken since April 2013 (construction of new classroom(s), white wash/plastering, repair of drinking water facility, repair of toilet, etc) and tick the appropriate box (Yes/No/Don't know).

## ASER 2014 - Training

The ASER survey is conducted in almost every rural district in India with the help of local organisations and institutions including universities and colleges, non-governmental organisations, self-help groups, youth clubs, government departments, District Institute of Education and Training (DIET) colleges, etc. On average ASER reaches over 560 districts each year, surveying an average of 650,000 children in more than 16,000 villages across the country. For ASER volunteers to succeed in this endeavour, they need to be trained rigorously.
A notable feature of ASER 2014 was ASER's partnership with 243 DIETs across 12 states. DIETs provide academic training and resource support to teachers and schools in their districts. These institutions are also responsible for the in-service and pre-service training of teachers, as well as the professional development of the education department staff at the block and district level who in turn support schools through monitoring and mentoring. The ASER-DIET partnership provided a unique opportunity to involve close to 14,000 future teachers in assessing the learning levels of children in rural India. The district-level training workshop for the survey offered DIET students an opportunity to understand the ASER survey process, tools, and the importance of building a childfriendly environment before testing, as well as fundamental concepts of assessment and how to communicate the findings of a simple assessment.

The ASER training process gives volunteers the skills needed to survey a village, assess children's learning levels reliably and record the information accurately. ASER Centre follows a rigorous three-tier training model that consists of:

## National Training:

ASER state team members are trained by the ASER central team

## State-level Training:

Master Trainers* are trained by the ASER state teams

## District-level Training:

Volunteers are trained by Master Trainers
Standardisation in training and survey is extremely important in order to ensure that the data collected is reliable and valid across districts and states. For this purpose, ASER Centre ensures that the guidelines and instructions for the trainings delivered at all three tiers are kept clear and consistent so that each participant is able to conduct the survey identically.

Tier I: National Workshop: Each year the ASER survey begins with a 6 -day national workshop. This year the national workshop brought together nearly 100 people - the core team, ASER state teams from across the country, representatives from NGOs, participants from other countries, interested independent researchers, and others. The training was held at the Pratham PACE Centre in the Khultabad block of Aurangabad, Maharashtra, from $1^{\text {st }}$ to $6^{\text {th }}$ August. It comprised of 4 days of classroom sessions and 2 days of field visits to nearby villages. The main objective of the national workshop is to orient all participants and thoroughly train the ASER state teams on the tools, procedures, and processes for the entire survey. Participants' understanding is evaluated through quizzes and mock trainings.
Key features of the national workshop include:

- Classroom sessions: These are designed to provide a theoretical understanding of the survey process, quality control processes, financial planning for the survey, etc. Manuals, role plays, group work, energizers, and Power Point Presentations are used to make the classroom sessions effective and engaging.
- Field visit: One day of the national workshop is devoted to practicing carrying out the actual survey. One additional field day is devoted to rechecking** the villages surveyed on the first field visit day. The two field

[^20]visit days are extremely useful for the participants to get hands-on experience of doing the survey and recheck.

- ASER quiz: A comprehensive quiz is administered in order to ensure that every participant understands the ASER survey content and process. Post training, additional sessions are organised to fill the learning gaps identified through the quiz results.
- Mock training: One day of the national workshop is devoted to mock trainings on the survey process. Participants are informed in advance about their topics. Mock training sessions are organised to gauge participants' training ability and assist them in improving the same. Participants are assessed by experienced ASER trainers and personalized feedback is given to each participant. This session prepares the participants to lead and deliver trainings in the next tier more efficiently and confidently.
- Clarification and feedback: At the end of the classroom and field sessions in the national workshop a short feedback and clarification round is conducted to provide additional support, close any gaps and ensure participants' complete understanding of the subject.
- Energizers: Energizers are used to enhance audience engagement during or in between classroom sessions. They make good ice-breakers for people attending the national workshop for the first time, creating a more participative and positive learning environment.
- State planning: The national workshop is also a time to finalize the roll-out plans for each state, including identification of partners, plans for state-level trainings and calendars for execution of the survey. Experience of the previous years' ASER survey is reviewed, people requirements are identified, partner lists are drawn up, tentative timelines are made, and detailed budgeting is done.
Tier II: State-level Training: These trainings are conducted in every state just before the district-trainings. The national training process is replicated in the state-level trainings. The main objective of this training is to prepare the Master Trainers as lead trainers so that they can successfully train the volunteers in their own districts. Statelevel trainings are also scheduled for 5 to 6 days with 3 to 4 days of classroom sessions and 2 days of field visits. More than 900 Master Trainers participated in ASER 2014.

The structure of state-level trainings is kept as close as possible to that of the national training. State level trainings too have five major components: classroom sessions, field visits, mock trainings, quizzes and districtlevel planning.
Performance in mock trainings, field visits and quiz results are analysed to identify under-confident Master Trainers, who are either replaced, re-trained and/or provided with additional support during district trainings. It is mandatory for all participants to be present on all days of the training. Any participant who is not present for all sessions of the training cannot qualify as a Master Trainer for ASER.
Tier III: District-level Training: The district-level training is the last tier of the training for the ASER survey. The Master Trainers, trained in the state-level training, now train the volunteers who are to conduct the survey in the villages. The district-level training is typically a three-day workshop. Like state-level trainings, key elements of district trainings include classroom sessions, field practice sessions and a quiz. Typically, in most districts, volunteers scoring low on the quiz are either replaced or are paired with stronger volunteers to carry out the survey. After the district-level training, the survey is conducted by a team of two volunteers in each village.
Monitoring of trainings: Specific steps are taken to ensure that key aspects of training are implemented across all state-level and district-level trainings.

- State-level trainings are usually attended and monitored by the head of the Pratham program in the state as well as members of the central ASER team.
- To support district-level activities of ASER including district-level training, in most states, a call centre is set up to monitor and support ASER teams. A trained call centre person interacts with Master Trainers on a daily basis to ensure that they complete all basic processes during training, survey and recheck.
- In all district-level trainings, records are maintained for each ASER volunteer. These records contain attendance data for each day of training and quiz marks of all volunteers. The data in this sheet is used extensively for volunteer selection for the ASER survey.
For a more detailed report on ASER 2014 training, please visit www.asercentre.org

## ASER 2014 - Monitoring \& Recheck

Monitoring and recheck activities are an integral part of the ASER process. Each year ASER processes are reviewed and concerted attempts are made to improve the quality of the data collected.
The monitoring-recheck system in ASER 2014 comprised three processes:
Call Centre Monitoring: Almost all states had a 'call centre' which made phone calls to all districts at every stage of the survey process - before and during district-level trainings, during the survey and during the recheck period. Information regarding the progress of these processes was collected during the calls. This helped to identify domains or locations requiring immediate corrective action or additional support from the ASER state teams.

Field Monitoring: The ASER survey in each district was led by at least two Master Trainers who underwent training at the state level. Part of their responsibility is to 'monitor' surveying teams who require additional support during the actual field survey. Approximately $70 \%$ of districts in ASER 2014 had a 2 weekend survey, i.e. half the villages ( 15 villages out of 30 ) were surveyed over one weekend and the other half (remaining 15 villages) were surveyed over the second weekend. Due to this phasing of the survey, Master Trainers were able to monitor at least 4 villages in a district over the 2 weekends.

Recheck: Information collected during the ASER survey is verified at various levels in a process known as 'recheck'. In ASER 2014, there were three levels of rechecks. The first level was done by Master Trainers immediately after the village survey. Second, sample-based rechecks were conducted by ASER state team members. A third level involved ASER Centre teams who moved across states to do cross-checks and field verification of data. In addition, an external recheck was also conducted in 9 states across India by select organisations in each state.

The following are details of recheck activities conducted in ASER 2014:

- Desk and Phone Recheck by Master Trainers: On the completion of the survey in a district, the Master Trainers conducted desk rechecks of the survey booklets received for all the surveyed villages. In addition, the Master Trainers telephoned at least 8 out of 20 surveyed households in each village. These procedures enabled quick identification of villages which were not surveyed correctly. These villages were then rechecked in person by the Master Trainers.
- Field Recheck by Master Trainers: Based on the information collected from the desk and phone rechecks, villages were identified for field recheck. In each such village, $50 \%$ of all surveyed households were rechecked. This process involved verification of the key parameters of the survey - sampling, selection of children and testing.
- Field Recheck by Others: Senior staff from NGO partners, professors from college partners and other Pratham and ASER staff conducted additional field rechecks where it was required.
- Field Recheck by ASER State Teams: Based on the performance of the Master Trainers and the surveyors, the ASER state teams also rechecked some selected villages.
- Cross-State Field Rechecks: Finally as the last stage to strengthen the quality control process, ASER state team members switched states and conducted a cross-state recheck. Some districts were chosen purposively and others were selected randomly. The process of the recheck was the same as the Master Trainer field recheck.
- External Recheck: In ASER 2014, colleges and NGOs across India conducted a field recheck in randomly selected districts and villages that were surveyed. This external recheck was conducted in Assam, Gujarat, Haryana, Jharkhand, Karnataka, Madhya Pradesh, Mizoram, Tamil Nadu and Uttar Pradesh.

In all, approximately 56\% of villages surveyed in ASER 2014 were either field monitored or field rechecked by Master Trainers, ASER State Teams and others.

## Frequently asked questions about ASER

Every year as the ASER process rolls out and as ASER findings are disseminated, people ask many questions. This note is an attempt to answer the most frequently asked questions. These have been grouped under four main categories - design and sampling, tools and testing, implementation and impact.

The following questions are addressed in the following pages.

## About design and sampling

1. Why does ASER test children at home and not in school?
2. What is the sample size of ASER? How does this compare with other large-scale surveys?
3. Why does ASER aim to generate district level estimates?
4. Why does ASER select 30 villages per district and 20 households per village? How are the villages selected?
5. Why is Census 2001 still being used as the sampling frame?
6. What happens if a village no longer exists, or has become an urban area?
7. What happens if a new state or district is created?
8. How can I find out which villages have been surveyed?
9. Do the ASER estimates for a district also apply to individual villages in that district?
10. Who designed this sampling strategy?
11. Why is ASER done every year?
12. Why is only one government school visited in a sampled village?
13. Why is ASER not done in urban areas?

## About tools and testing

14. Why does ASER only assess reading and arithmetic?
15. What are the guidelines that are followed in developing the reading and arithmetic assessment tools?
16. Are the reading assessments comparable across different languages?
17. Why does ASER test children individually and in an oral format?
18. During the test administration, why does the ASER assessment of reading begin at the Grade 1 passage level? Why does the ASER assessment of arithmetic begin at the Grade 2 subtraction level?
19. Why does the arithmetic testing process not include addition or multiplication?
20. Why are all children in the age group 5 to 16 assessed with the same tools? Why does ASER not assess children at their grade level?
21. During assessment, are all children given the same arithmetic and reading tool?
22. What do we know about the reliability and validity of the ASER assessments?

## About implementation

23. Why does ASER use volunteers? Are the volunteers capable and well trained to do the survey?
24. Who funds ASER?

## About impact

25. What impact has ASER had?
26. Has ASER had an impact in other countries as well?

## About design and sampling

## 1. Why does ASER test children at home and not at school?

The ASER survey generates estimates of schooling and basic learning status for ALL children in rural India in the age group of 5-16 years. This includes children enrolled in different types of schools (government, private, and other kinds) as well as children not currently enrolled in school.

The first problem with school-based testing is that there is no complete list of all schools in the country. In particular, there are many low-cost private schools which are not found on any official list. Without a complete list of all schools, it is not possible to select an unbiased sample of schools. The second problem with schoolbased testing is that not all children are in school. Some have dropped out of school, others are absent from school on the day of the survey, and some have never been enrolled. Testing in school would mean that these children would not be included.

ASER tests children at home so as to include all these different kinds of children. Household based testing is the only way to ensure that ALL children are included, especially in the Indian context.

## 2. What is the sample size of ASER? How does this compare with other large-scale surveys?

ASER aims to generate district level estimates of children's schooling status, basic reading and arithmetic. On average, ASER reaches over 560 rural districts. In each district, 30 villages are randomly sampled and in each sampled village, 20 households are randomly selected. This gives a total of $30 \times 20=600$ households in each rural district. Depending on the exact number of districts surveyed, between 320,000 and 350,000 households across the country are sampled for each year's ASER. In every surveyed household, all children in the age group of 3-16 years are surveyed and all children aged 5-16 are tested in basic reading and arithmetic. An average of 650,000 children are surveyed across the country each year.

The NSS Survey conducted by the Government of India's National Sample Survey Office' is the main source of official data for estimating poverty, employment and for other socioeconomic indicators. The ASER sample of households is larger than the NSS sample for rural India. The 68th round of the NSS Consumer Expenditure Survey, done from July 2011 to June 2012, sampled a total of 100,957 households, of which 59,129 were rural households. In contrast, ASER 2014 sampled a total of 341,070 rural households. ${ }^{2}$

## 3. Why does ASER aim to generate district level estimates?

Most official statistics in India produce estimates only at the state and national level. Even poverty estimates in India, obtained from the National Sample Survey Office, are available only at state or regional level, not at district level. However, planning and allocation of resources is often done at the district level. For example, in elementary education, annual work plans are made at the district level. While information for enrollment, access and inputs is available annually for each district, estimates of children's learning are neither available at the district level, nor are they available annually. For these reasons ASER aims to provide learning estimates at the district level each year. ${ }^{3}$

## 4. Why does ASER select 30 villages per district and 20 households per village? How are the villages selected?

The sampling strategy used enables ASER to generate a representative picture of each district. Almost all rural districts are surveyed in ASER each year. The estimates obtained are then aggregated (using appropriate weights) to the state and all-India levels. The sample size is 600 households per district.

[^21]In each year's ASER, the 30 villages surveyed in a district comprise 10 villages from the previous year's survey, 10 more from two years ago, and 10 new villages selected from the Census village directory using PPS. The 20 old villages and 10 new villages give us what is known as a "rotating panel" of villages, which generates more precise estimates of change. Having a rotating panel of villages means that every year some old and some new villages are included, which ensures that there is both continuity and change in the sample from previous years.

## 5. Why is Census 2001 still being used as the sampling frame?

For ASER, we need the following information: name of the village, number of households, village population and block name. While a lot of information from Census 2011 has been released, not all of the information needed for ASER sampling is in the public domain. Hence ASER still uses Census 2001 as the sampling frame.

## 6. What happens if a village no longer exists, or has become an urban area?

Every year ASER Centre generates the ASER village list from the village directory of the Census 2001. This village list is final. This is to maintain randomness of the sample, which is important in order to obtain reliable estimates. However, every year there are certain situations in which replacement villages are required, such as when a village is affected by floods or other natural disasters, or when it has been reclassified as a town. In such cases, ASER Centre provides the name of a replacement village.

## 7. What happens if a new state or district is created?

ASER uses the Census 2001 Village Directory to sample villages. Since 2001, many new districts have been created. We have incorporated some of these when the state administration has been able to provide us with a complete list of tehsils, blocks and villages in the newly constituted districts. In addition, information on household population for all the villages is also necessary. When this information has been made available we have used it as the frame for sampling in the new districts. However, the newly constituted districts cannot be compared with the original district they have been carved out from. Therefore, estimates of the new districts are not combined to compare with those of the original district.

Between 2005 and 2013, no new state was created in India. In June 2014, Andhra Pradesh was divided into Telangana and Andhra Pradesh. The two new states have different state administrations and hence cannot be compared with the original state they were carved out from. In the ASER 2014 Report, therefore, we are presenting estimates for 2014 for the two new states and trends over time for the original state of Andhra Pradesh. The reason for doing the latter is that the two states are very new and there was hardly any change in administration when the survey went into the field in October 2014. Also, 2014 marks the $10^{\text {th }}$ year of ASER and trends over the last 10 years are being presented for all major states.

## 8. How can I find out which villages have been surveyed?

This information is not in the public domain: the ASER village list is confidential and is not shared with anyone. In all large-scale surveys and research studies, it is standard practice to maintain the confidentiality of respondents. This means that any information that could enable someone to identify particular individuals, households, or villages is removed. This includes village names, respondent names, and so on.

## 9. Do the ASER estimates for a district also apply to individual villages in that district?

No, they do not. ASER estimates for a district are representative at the district level, and provide a snapshot of children's schooling and learning status for the district as a whole. The data collected for a village is only from 20 randomly selected households. This sampling is not representative of the village. The situation in individual villages may be different.

## 10. Who designed this sampling strategy?

The ASER sampling strategy was designed in consultation with experts at the Indian Statistical Institute, New Delhi. Inputs were also received from experts at the Planning Commission of India and the National Sample Survey Office (NSSO).

[^22]
## 11. Why is ASER done every year?

ASER is done every year for several reasons. First, in addition to presenting district, state and national level estimates each year, ASER also presents trends over time. Comparable measurements have to be done periodically in order to see how the situation is changing. The ASER measurement is done annually because government plans and allocations for elementary education are made every year. If children's learning outcomes are to improve, then evidence on how much children are learning needs to be taken into account during the process of review and planning each year.

Second, longer gaps between assessments can have serious implications for children currently in school. It is well known that falling behind in school often leads to dropping out altogether. If several years go by between assessments, opportunities are lost to take rapid corrective action in order to ensure that children who are falling behind are able to catch up.

Third, it takes time to shift the focus from schooling to learning. When ASER began in 2005, the issue of children's learning was rarely discussed. But after ten years of ASER, the topic of children's learning is very much on the national agenda.

## 12. Why is only one government school visited in a sampled village?

ASER is a household survey and children are surveyed and tested at home. This is done so as to capture all children - those who are enrolled in government schools, private schools or some other kinds of schools, as well as those who are not enrolled in school. However, to report on basic infrastructure and attendance, one government school is visited in every sampled village. In the case of multiple eligible schools in the village the instruction given to volunteers is to visit the largest government school having primary classes.

Sampling of schools is not done for a variety of reasons. First, there is not a reliable sampling frame available for all schools. Second, creating a list of schools and sampling from it is not feasible given the time constraints and varied backgrounds of the volunteers.

It is for these reasons that we state quite clearly that the school tables are based on school observations. However, since ASER covers all rural districts of India, the number of schools visited is quite large and enough to provide reliable estimates at the state level.

## 13. Why is ASER a rural survey and not an urban one?

To do an urban ASER survey, there are several areas in which additional preparatory work needs to be done on methodology and measures. First, more research is needed on the appropriate sampling methodology for urban areas (these would include mega cities, metros as well as district and block towns), including the question of where to draw a sample from. In the case of rural India, the Census village directory provides a complete list of all villages in the country. This provides the sampling frame for ASER (the official 'master list' from which a sample of villages is drawn). But in the case of urban India, populations are less stable, and therefore city-level 'master lists' of possible sampling units are often less reliable. For example, they may exclude unrecognised slums and homeless persons. This means that sampling may be biased and may exclude the most marginalised populations - precisely those populations where children's learning is likely to be poorest.

More work also needs to be done to develop tools that assess higher levels of learning. The current ASER tools are 'floor' assessments of basic reading and arithmetic. Testing such basic levels of mastery may not be useful in urban contexts, where the number and variety of schooling options is far greater, children stay in school longer, and children's acquisition of early reading and arithmetic abilities is likely to be higher. The use of higher level tools may in turn require a different implementation strategy, since testing will require more time and more skill.

Finally, there is the issue of what to do with an urban report and how to fit the evidence into a policy and planning process so that it can lead to action. For rural areas, ASER information can be integrated into the annual planning process at the district and state levels. Urban planning especially for elementary education is not as straightforward, especially for urban locations with diverse governance structures.

Nevertheless, ASER Centre has done an Urban Ward census of five low income wards in the cities of Jaipur, Delhi, Patna, Mysore and Hyderabad in 2010-11 and 2014. The reports may be found on the ASER Centre website. ${ }^{5}$

## About tools and testing

## 14. Why does ASER only assess reading and arithmetic?

Since its inception, Pratham's work has focused on literacy and arithmetic acquisition. Since the early years of our work we noted that a surprisingly large number of children in primary grades were struggling with reading and basic arithmetic. Difficulties in these two domains prevent children from acquiring further skills that are built on the foundational skills of fluent reading, number recognition and basic arithmetic ability. The weak foundation also impacts performance in other subject areas. Such difficulties adversely impact children's later academic outcomes. Given these important considerations and given the fact that no estimates for learning for early grades were available in India at the time, the assessment of early reading and basic arithmetic ability came to be the primary focus of the ASER survey.

## 15. What are the guidelines that are followed in developing the reading and arithmetic assessment tools?

By design ASER is a 'floor' test which aims to evaluate children's early reading and basic arithmetic ability ${ }^{6}$. The reading and arithmetic assessments, first used in 2005, were developed taking into account the state-mandated curriculum for each state. The content of the reading assessment (i.e. the selection of words, the length of sentences and reading passages) was aligned to the Grade 1 and 2 level textbooks in each state. At the letter level, recognition of single letters is assessed. ${ }^{7}$ At the word level, simple one and two syllable words, commonly used every day and appropriate for Grade 1 are included. In the development of Grade 1 and 2 level passages, orthography-specific indicators such as the use of simple letters, secondary representations of letters, and conjoint letters have been considered along with sentence and passage length. Vocabulary used in the reading passages is aligned to the state-mandated curriculum for appropriateness. In addition, since ASER 2010 we have also calculated the type-token ratios ${ }^{8}$ for the reading passages as an additional index to ensure comparability across test forms.

The ASER arithmetic assessment measures children's foundational skills in numeracy such as one and two digit number recognition and the ability to perform basic arithmetic operations such as subtraction (with borrowing) and division (three digit by one digit division). The highest level of the arithmetic assessment is aligned to Grades 3 or 4 of the state-mandated curriculum. ${ }^{9}$

## 16. Are the reading assessments comparable across different languages?

The ASER reading tool is available in 19 languages including English. The ASER reading assessments do not strive to be comparable across languages. The objective is to develop a tool that assesses the most basic foundation skills for literacy acquisition, i.e. letter recognition, the reading of simple words and reading words in connected text that are of Grade 1 and Grade 2 level for each language. Consequently, the inference based on the ASER reading assessment is not about comparing performance across different languages but to evaluate children's level of reading in relation to the state-mandated curriculum for Grades 1 and 2.

[^23]
## 17. Why does ASER test children individually and in an oral format?

Over the last decade, reading has come to be recognised as an important skill. The assessment of reading, especially for those who are learning to read, can only be done orally and for each child individually. Assessments of early reading ability in other countries are also administered in this format. ${ }^{10}$ A typical pen-and-paper test of comprehension assumes that the child can read. A pen-and-paper test is not a viable option for a child who is a beginning reader or a struggling reader as it places additional cognitive demands on the child to read and comprehend instructions. In ASER, to minimise the cognitive demands of reading and comprehending instructions and to maintain a standard administration approach, both the reading and the arithmetic assessment are administered individually in an oral format. ${ }^{11}$
18. During the test administration, why does the ASER assessment of reading begin at the Grade 1 passage level? Why does the ASER assessment of arithmetic begin at the Grade 2 subtraction level?

The content of the ASER assessments is aligned to Grades 1 and 2 for reading and Grades 1, 2, and 3 or 4 for arithmetic. Since the same assessments are also administered to children in Grade 3 or higher, ${ }^{12}$ an adaptive testing approach is used. Administration of the reading test begins at the Grade 1 passage level and the administration of the arithmetic test begins at the Grade 2 subtraction level. If the child is able to perform these tasks, he/she is given the task at the next level, i.e. Grade 2 passage for reading and Grade 3/4 level division for arithmetic. If the child does not perform to a satisfactory standard, he/she is given the task at the lower level, i.e. simple words for reading and two digit number recognition for arithmetic. Hence, the level of the task administered is adapted to match the child's ability level. In this administration format each child attempts only two or three tasks for each assessment instead of all four tasks, making the assessment quicker to administer without compromising the objective of identifying the child's reading and arithmetic level.

## 19. Why does the arithmetic testing process not include addition or multiplication?

Pratham's large scale experience of working with children indicates that when children are given all four basic numeric operations (addition, subtraction, multiplication and division), practically every child who can do subtraction (2 digit operations with borrowing) can also do addition with carry over. A similar trend was observed in division and multiplication. These trends were also observed in preparatory work done for the ASER survey and in other data collection efforts.

## 20. Why are all children in the age group of 5 to 16 years assessed with the same tools? Why does ASER not assess children at their grade level?

The objective of the ASER survey is to ascertain whether or not children have attained early foundational skills in reading and arithmetic. This is irrespective of age or grade level. It is not designed to be a grade-appropriate assessment; it is designed to provide an understanding of school-aged children's early reading and basic arithmetic ability. Hence the same tools are used for the entire age range.

## 21. During assessment, are all children given the same arithmetic and reading tool?

Two ASER volunteers visit each sampled village to conduct the survey. Each team is given four samples of the reading and arithmetic tool. Investigators are asked to administer the first sample to the first child tested in each household, followed by the second sample for the second child, and so on for additional children. Since children often gather around when the testing is being done, one volunteer does the testing and the other engages the other children in conversation or some other activity.

[^24]
## 22. What do we know about the reliability and validity of the ASER assessments?

Reliability is the consistency with which a test measures any given skill and thereby enables us to consistently distinguish between individuals of differing ability levels. Given that the ASER assessments evaluate mastery at different reading and arithmetic levels, reliability here is the consistency of the decision-making process. Validity indicates whether the test measures what it purports to measure - in other words, is the inference based on the ASER reading assessment about children's mastery or non-mastery of basic reading ability valid? Is the inference based on the ASER math assessment about children's mastery or non-mastery of basic math ability valid?

Three studies were conducted to explore the question of reliability and validity of ASER measurements. The findings from these studies provide favourable empirical evidence for the reliability and validity of the ASER assessments. The findings indicate (a) substantial reliability of decisions across repeated measurements, i.e. consistency in the level assigned to a child assessed by the same examiner on two different occasions, and (b) satisfactory inter-rater reliability, i.e. consistency in the level assigned to a child assessed by different examiners. ${ }^{13}$

In 2010, an impact evaluation study of Pratham's Read India program was conducted by Abdul Jameel Poverty Action Lab (J-PAL). In this evaluation, the measurement of children's learning outcomes included several literacy and arithmetic assessments including the ASER reading and arithmetic assessments. This allowed us to correlate children's performance on the ASER assessments with the additional assessments of reading and arithmetic. This empirical study provided compelling evidence for the validity of the ASER assessments. ${ }^{14}$

## About implementation

## 23. Why does ASER use volunteers? Are the volunteers capable and well trained to do the survey?

ASER is a citizens' initiative, implemented by partner organisations in every rural district across the country. One of the major aims of the survey is to generate awareness and mobilise people around the issue of children's learning. The entire design of ASER thus revolves around the fact that it aims to reach and involve 'ordinary people' rather than experts. All tools and procedures are designed to be simple to understand, quick to do, and easy to communicate.

Procedures for ensuring the quality of data have evolved over several years. Typically ASER volunteers are given 3 days of training. One of these days is spent practicing all ASER steps and procedures in the field. The 'practice' day is a critical part of the training process. It is during this session that trainers can assess how well volunteers have understood the actual process of what is to be done in a village. At the end of the training, a quiz is conducted to ensure that volunteers have understood the key elements of ASER. Based on the volunteers' participation in classroom sessions, performance in the field practice session and scores in the quiz, decisions on how to pair volunteers for the survey are made. If a volunteer's performance is found to be weak during the training, he/she may not be eligible to do the ASER survey. In addition, ASER Master Trainers monitor some volunteers on the field during the survey. Often, volunteers identified as somewhat weak are accompanied to the field by the Master Trainers so as to clarify doubts and ensure that volunteers adhere to ASER survey rules. After the survey, Master Trainers execute three important quality control processes. First, they conduct a desk check of all survey booklets to ensure that all survey sheets are filled completely. Second, they conduct a phone recheck wherein they phone 8-10 households in each village in their district to ensure that the volunteers actually visited these households and surveyed them. Third, they conduct field rechecks of some villages wherein they visit surveyed households to confirm whether all information has been correctly filled and all children tested according to the ASER procedure. In ASER 2014, for example, more than half of all surveyed villages were either monitored or rechecked or both.

[^25]
## 24. Who funds ASER?

ASER is a citizens' initiative, designed by Pratham/ASER Centre ${ }^{15}$ and implemented each year by partner organisations in almost all rural districts. Approximately 25,000 volunteers participate in ASER each year. People who conduct ASER each year donate their time to ASER and are compensated only for their local travel and food costs. The ASER survey receives support from a variety of sources including foundations, development agencies and corporates. A substantial portion of the funding also comes from individuals. Each year the names of the partner organisations and sources of support are listed in the ASER report. ASER does not receive funding from any government institution.

## About impact

## 25. What impact has ASER had?

In 2005, when ASER began, most people from parents to governments were concerned with getting children into school. The assumption was that if children are in school, they must be learning. Today, the fact that large proportions of children are not learning even the basics is widely recognised. For example, ASER has been cited in major Government of India documents such as the XI and XII Five Year Plan and the Economic Survey of India. Many state governments are now implementing their own learning assessments, and some are implementing programs aimed at improving learning outcomes. Media coverage of ASER in international, national, regional and state media, in both English and regional languages, is enormous and growing each year. In the last few years, questions have been raised in Parliament about children's learning. Every year increasing numbers of government teacher training colleges are participating in the ASER survey. Overall, ASER has had a major influence in bringing the issue of learning to the centre of the stage in discussions and debates on education in India.

In addition, the ASER model is increasingly being recognised on global education platforms. In the lead up to the establishment of the post 2015 Millennium Development Goals, members of the extended ASER network in many countries have made concerted efforts to ensure that indicators of learning and not just schooling are included in the new MDGs. ASER and ASER-like initiatives are mentioned in documents of Global Monitoring Report brought out by UNESCO and the Learning Metrics Task Force (coordinated by Brookings Institution and UNESCO Institute of Statistics). The work of ASER and similar initiatives are cited in documents related to new versions of PISA (PISA for development). And the importance of large-scale community-based assessment carried out by citizens is beginning to be recognised in international policy and advocacy circles as a viable alternative to other existing assessment models.

A great deal remains to be done to ensure that every child in India is in school and learning well. But the first step is for the problem to be recognised. The second step is to have reliable evidence on the nature and extent of the problem. Only then can workable solutions be found.

## 26. Has ASER had an impact in other countries as well?

Yes, it has. The simplicity of ASER's tools and processes coupled with the rigour of its sampling methodology and low cost makes it an interesting option for many countries with contexts similar to India. The ASER methodology has spread organically to several other countries, all of which follow the same set of basic guiding principles while adapting the model to their own context. There is an ASER in Pakistan, conducted since 2008. The initiative is called Uwezo in East Africa (Kenya, Tanzania, Uganda), where it has been implemented since 2009. The Beekungo initiative began in Mali in 2011 and Jangandoo in Senegal in 2012. Mexico conducted the Medición Independiente de Aprendizaje in one state in 2014. Nigeria is getting ready to do a pilot soon. Several other countries in Asia, Africa and South America have expressed interest in learning more about the model.
${ }^{15}$ ASER Centre is an autonomous research and assessment unit of Pratham.

Enrollment in private schools: Statewise maps showing \% of children (age 6-14) who are enrolled in private schools

Std V Reading: Statewise maps showing \% of government school children in Std V who can read Std II level text

ASER 2014 reached 577 rural districts across India. The survey was carried out in 16,497 villages, covering 341,070 households and 569,229 children.

## 2014 is the sixth year in a row that enrollment levels are $96 \%$ or higher for the 6-14 age group. The proportion of children currently not in school remains at $3.3 \%$.

- India is close to universal enrollment for the age group 6-14, with the percentage of children enrolled in school at $96 \%$ or above for six years in a row.
- Nationally, the percentage of children out of school (age group 6-14) remains at 3.3\%, the same as the figure last year.
- In some states the proportion of girls (age group 11-14) out of school remains greater than $8 \%$. These states are Rajasthan (12.1\%) and Uttar Pradesh (9.2\%)
- Although enrollment levels are very high for the age group covered by the Right to Education Act (i.e. 6 to 14 years), the proportion of 15 to 16 year olds not enrolled in school is substantial. Nationally, for rural areas, $15.9 \%$ of boys and $17.3 \%$ of girls in this age group are currently out of school.

## The proportion of children enrolled in private schools has increased slightly from last year.

- In 2014, 30.8\% of all 6-14 year old children in rural India are enrolled in private schools. This number is up slightly from 29\% in 2013.
- As in previous years, in each age group, a higher proportion of boys go to private schools as compared to girls. In 2014, in the age group $7-10$ years, $35.6 \%$ of boys are enrolled in private schools as compared to $27.7 \%$ of girls. For the age group of 11-14 years, $33.5 \%$ of boys are in private schools as compared to $25.9 \%$ of girls.
- Compared to similar figures in 2013, there has been an increase in private school enrollment in almost all states. The only exceptions to this are Gujarat, Maharashtra, Uttarakhand, Nagaland and Kerala.
- Five states in India now have private school enrollment rates in the elementary stage that are greater than 50\%. These are Manipur (73.3\%), Kerala (62.2\%), Haryana (54.2\%), Uttar Pradesh (51.7\%), and Meghalaya (51.7\%).

## Reading levels remain low and unchanged.

- Overall, the situation with basic reading continues to be extremely disheartening in India. In 2014, in Std III, only a fourth of all children can read a Std II text fluently. This number rises to just under half in Std V. Even in Std VIII, close to $75 \%$ children can read Std II level text (which implies that $25 \%$ still cannot).
- Some very small improvements in reading are visible in the last few years. For example, the proportion of Std V children who can read at least a Std II level text has inched upwards from 46.8\% in 2012 to 47\% in 2013 and to $48.1 \%$ in 2014. 38.7\% of Std III children could read at least a Std I level text in 2012. This number is slightly higher at 40.2\% in 2014.
- In some states, reading levels have improved since last year. For example, in 2014 a higher proportion of children in Std V in Himachal Pradesh, Haryana, Bihar, Odisha and Karnataka can read at least a Std II level text than was the case last year. Tamil Nadu shows major gains in reading over last year for Std V .
- Looking at trends over time, in many states the reading status of children is largely unchanged. However in some states, like Bihar, Assam, Jharkhand, Chhattisgarh, Madhya Pradesh and Maharashtra there are visible declines in reading levels over the last 5-6 years.

## Math continues to be a serious and major source of concern.

- The All India (rural) figures for basic arithmetic have remained virtually unchanged over the last few years. In 2012, 26.3\% of Std III children could do a two digit subtraction. This number is at $25.3 \%$ in 2014. For Std V children, the ability to do division has increased slightly from $24.8 \%$ in 2012 to $26.1 \%$ in 2014.
- There are other trends which are quite worrying. For example, the percentage of children in Std II who still cannot recognize numbers up to 9 has increased over time, from $11.3 \%$ in 2009 to 19.5\% in 2014.
- Similarly, the ability to do division among Std VIII students has been dropping since 2010. The proportion of Std VIII students who could correctly do a three digit by one digit division problem was $68.3 \%$ in 2010. This number has dropped to $44.1 \%$ in 2014.
- Few changes are visible since last year (except in Tamil Nadu where there are improvements). However looking over a five to eight year period, it is clear that math levels have declined in almost every state. Karnataka and Andhra Pradesh are the exceptions where the situation has been more or less the same for the past several years.

## Ability to read English is unchanged for lower primary grades.

Assessments of basic English have been carried out in 2007, 2009, 2012 and 2014.

- Children's ability to read English is relatively unchanged in lower primary grades. In 2014, about $25 \%$ of children enrolled in Std $V$ could read simple English sentences. This number is virtually unchanged since 2009.
- However, a decline is visible in upper primary grades. For example, in 2009, $60.2 \%$ of children in Std VIII could read simple sentences in English but in 2014, this figure is 46.8\%.
- In 2014, of those who can read words (regardless of grade), roughly $60 \%$ could explain the meanings of the words read. Of those who can read sentences, $62.2 \%$ in Std $V$ could explain the meaning of the sentences. Depending on the class, the ability to say the meaning (of words and sentences) was higher in previous years.

## School observations

ASER 2014 visited 15,206 government schools with primary sections. Of these 8,844 were primary
schools and 6,362 were upper primary schools which also had primary sections.

## Teacher and child attendance show no major changes from last year.

- In 2014, ASER data indicates that 71.4\% of enrolled children in primary schools and 71.1\% of enrolled children in upper primary schools were present on the day of the visit. In 2013, these figures were $70.7 \%$ in primary schools and $71.8 \%$ in upper primary schools.
- As in previous years, children's attendance varies considerably across the country. States like Himachal Pradesh, Punjab, Uttarakhand, Gujarat, Maharashtra, Karnataka, Andhra Pradesh, Kerala and Tamil Nadu have attendance levels that range from 80 to $90 \%$. But in states like Uttar Pradesh, Bihar, Weat Bengal, Jharkhand, and Madhya Pradesh, attendance rates are much lower and range from 50 to 60\%.
- Trends over time show that children's attendance both in primary and upper primary schools was higher in 2009 as compared to 2014. In 2009, attendance was at $74.3 \%$ in primary schools and $77 \%$ in upper primary schools.
- Since 2009, there has been a small decrease in the attendance rates of teachers. For primary schools, in 2014, 85\% of appointed teachers were present in school on the day of the visit as compared to $89.1 \%$ in 2009. The 2014 figure for teacher attendance in upper primary schools is $85.8 \%$ as against $88.6 \%$ in 2009.

## The proportion of "small schools" in the government primary school sector continues to grow.

- Of the government primary schools visited in 2014, over one third are "small schools" with a total enrollment of 60 children or less.
- In 2009, the percentage of government primary schools visited that were "small" was $26.1 \%$.

## For the most part, improvement in school facilities continues.

- The percentage of schools complying with RTE mandated pupil-teacher ratios has increased from $45.3 \%$ last year to 49.3\% in 2014. In 2010, this figure was 38.9\%.
- Nationally, as far as office/store, playground, boundary wall and kitchen shed are concerned, progress is visible from year to year.
- With respect to drinking water provision and availability, drinking water was available in $75.6 \%$ of the schools that were visited. In 2010, this figure was $72.7 \%$. In four states (Bihar, Uttar Pradesh, Gujarat and Himachal Pradesh), drinking water was available in more than $85 \%$ of schools.
- ASER records whether toilets are available and useable on the day of the visit. Since 2010, there has been significant progress in the availability of useable toilets. Nationally in 2014, 65.2\% of schools visited had toilet facilities that were useable. In 2013, this figure was $62.6 \%$ and in 2010 , it was $47.2 \%$ ). The proportion of schools visited where girls' toilets were available and useable has gone up from $32.9 \%$ in 2010 to $53.3 \%$ in 2013 to $55.7 \%$ in 2014. In four states, more than $75 \%$ of schools visited had useable girls' toilets. These states are Gujarat, Kerala, Himachal Pradesh and Haryana.
- There is a small increase in the availability of computers in the schools visited. The 2014 figure stands at $19.6 \%$, as compared to $15.8 \%$ in 2010 . Several states stand out in this regard. In Gujarat, $81.3 \%$ of schools visited had computers; this number was $89.8 \%$ in Kerala, $46.3 \%$ in Maharashtra and $62.4 \%$ in Tamil Nadu.
- The proportion of schools with library books has increased substantially, from $62.6 \%$ in 2010 to $78.1 \%$ in 2014. In about $40.7 \%$ of schools that were visited, children were seen using library books as compared to $37.9 \%$ in 2010.

## School enrollment and out of school children

## Table 1: \% Children in different types of schools 2014

| Age group | Govt. | Pvt. | Other | Not in <br> school | Total |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Age: 6-14 ALL | 64.9 | 30.8 | 1.0 | 3.3 | 100 |
| Age: 7-16 ALL | 63.0 | 30.5 | 1.0 | 5.6 | 100 |
| Age: 7-10 ALL | 65.1 | 31.8 | 1.1 | 2.0 | 100 |
| Age: 7-10 BOYS | 61.5 | 35.6 | 1.1 | 1.8 | 100 |
| Age: 7-10 GIRLS | 68.9 | 27.7 | 1.2 | 2.2 | 100 |
| Age: 11-14 ALL | 64.4 | 29.8 | 0.9 | 5.0 | 100 |
| Age: 11-14 BOYS | 61.3 | 33.5 | 0.8 | 4.4 | 100 |
| Age: 11-14 GIRLS | 67.5 | 25.9 | 1.0 | 5.7 | 100 |
| Age: 15-16 ALL | 53.8 | 28.9 | 0.7 | 16.6 | 100 |
| Age: 15-16 BOYS | 52.9 | 30.7 | 0.5 | 15.9 | 100 |
| Age: 15-16 GIRLS | 54.6 | 27.2 | 0.9 | 17.3 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school <br> Not in <br> school <br> or pre- <br> school |  |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age 3 |  |  |  | Pvt. | Other |  |  |
| Age 4 | 52.8 |  |  | 37.1 | 100 |  |  |
| Age 5 | 21.6 | 17.1 | 31.9 | 18.6 | 1.0 | 9.7 | 100 |
| Age 6 | 5.6 | 9.3 | 54.3 | 25.0 | 1.1 | 4.7 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time \% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 10.3\% in 2006, 6.8\% in 2009, 5.2\% in 2011 and is 5.7\% in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 23.2 | 41.8 | 21.5 | 8.1 | 5.4 |  |  |  |  |  |  |  | 100 |
| \\| | 3.8 | 14.4 | 39.6 | 27.7 | 6.6 | 5.0 | 2.9 |  |  |  |  |  | 100 |
| III |  | 8 | 14.0 | 40.8 | 23.9 | 11.0 | 6.6 |  |  |  |  |  | 100 |
| IV | 4.7 |  |  | 15.2 | 34.2 | 31.4 | 7.0 | 7.5 |  |  |  |  | 100 |
| V | 5.8 |  |  |  | 10.0 | 42.6 | 24.0 | 11.6 | 6.0 |  |  |  | 100 |
| VI | 4.2 |  |  |  |  | 14.2 | 34.4 | 33.1 | 8.5 | 5.7 |  |  | 100 |
| VII | 5.5 |  |  |  |  |  | 10.3 | 41.9 | 27.2 | 10.5 | 4.6 |  | 100 |
| VIII | 4.4 |  |  |  |  |  |  | 15.1 | 39.3 | 30.5 | 7.9 | 2.9 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $40.8 \%$ children are 8 years old but there are also $14 \%$ who are $7,23.9 \%$ who are 9 , $11 \%$ who are 10 and $6.6 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 48.6 | 30.2 | 12.1 | 4.5 | 4.5 | 100 |
| II | 25.7 | 31.6 | 19.6 | 11.0 | 12.2 | 100 |
| III | 14.9 | 25.0 | 20.0 | 16.6 | 23.6 | 100 |
| IV | 8.4 | 17.5 | 17.9 | 18.9 | 37.4 | 100 |
| V | 5.7 | 12.8 | 14.3 | 19.1 | 48.1 | 100 |
| VI | 3.5 | 9.0 | 10.9 | 17.8 | 58.8 | 100 |
| VII | 2.6 | 6.2 | 8.1 | 15.4 | 67.7 | 100 |
| VIII | 1.8 | 4.5 | 6.2 | 12.8 | 74.6 | 100 |
| Total | 15.1 | 17.9 | 13.9 | 14.3 | 38.9 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $14.9 \%$ children cannot even read letters, $25 \%$ can read letters but not more, $20 \%$ can read words but not Std I level text or higher, $16.6 \%$ can read Std I level text but not Std II level text, and $23.6 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$

## Reading Tool

सावन का महीना था। आसमान में बहुत काले-काले बादल छाए थे। ठंडी-ठंडी हवा चल रही थी। मुझे झूला झूलने का मन किया। बड़े भैया एक मोटी सी रस्सी लेकर बाहर आए। भैया ने रस्सी को पेड़ से लटकाकर झूला बनाया। सब ने मिलकर खूब झूला झूला। बाकी बच्चे भी आकर मज़े से झूलने लगे। झूलते-झूलते रात हो गई।

बग़ीचे में एक पेड़ है। पेड़ पर एक तोता रहता है। तोते का रंग हरा है। वह लाल टमाटर खाता है।

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 86.6 | 93.9 | 88.3 | 73.7 | 83.8 | 75.8 |
| 2011 | 80.1 | 92.6 | 83.5 | 64.6 | 81.5 | 68.7 |
| 2012 | 75.2 | 90.6 | 79.9 | 55.9 | 77.6 | 62.0 |
| 2013 | 71.5 | 89.9 | 77.1 | 55.4 | 80.2 | 62.4 |
| 2014 | 67.5 | 88.2 | 74.5 | 52.1 | 78.1 | 60.2 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt.* |
| 2010 | 65.5 | 76.2 | 67.7 | 50.7 | 64.2 | 53.7 |
| 2011 | 55.8 | 73.9 | 60.0 | 43.8 | 62.7 | 48.3 |
| 2012 | 50.5 | 70.1 | 55.7 | 41.7 | 61.2 | 46.9 |
| 2013 | 50.3 | 74.2 | 56.6 | 41.1 | 63.3 | 47.0 |
| 2014 | 49.2 | 73.1 | 56.3 | 42.2 | 62.5 | 48.1 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 42.4 | 33.9 | 19.3 | 3.4 | 1.1 | 100 |
| ॥ | 19.5 | 36.5 | 31.2 | 9.9 | 2.8 | 100 |
| III | 10.0 | 29.4 | 35.3 | 18.0 | 7.4 | 100 |
| IV | 5.3 | 21.2 | 33.3 | 24.1 | 16.1 | 100 |
| V | 3.9 | 15.4 | 30.1 | 24.5 | 26.1 | 100 |
| VI | 2.3 | 10.5 | 29.2 | 25.8 | 32.2 | 100 |
| VII | 1.7 | 7.5 | 28.5 | 24.4 | 37.8 | 100 |
| VIII | 1.3 | 5.4 | 26.1 | 23.2 | 44.1 | 100 |
| Total | 11.8 | 20.8 | 29.0 | 18.6 | 19.8 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 10\% children cannot even recognize numbers 1-9, 29.4\% can recognize numbers up to 9 but not more, $35.3 \%$ can recognize numbers up to 99 but cannot do subtraction, $18 \%$ can do subtraction but cannot do division, and $7.4 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |

| 2011 | 82.0 | 93.3 | 85.1 | 61.1 | 79.6 | 65.7 |
| 2012 | 79.3 | 94.1 | 83.8 | 54.1 | 79.5 | 61.2 |
| 2013 | 78.0 | 92.6 | 82.4 | 53.7 | 81.1 | 61.4 |
| 2014 | 74.9 | 91.8 | 80.6 | 51.6 | 80.7 | 60.7 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| $* * *$ | \% Children in Std IV who can <br> do at least subtraction | \% Children in Std V who can <br> do division |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 55.1 | 67.7 | 57.7 | 33.9 | 44.2 | 36.2 |
| 2011 | 44.4 | 62.5 | 48.5 | 24.5 | 37.7 | 27.6 |
| 2012 | 36.2 | 59.3 | 42.3 | 20.3 | 37.8 | 24.9 |
| 2013 | 33.9 | 61.3 | 41.1 | 20.8 | 38.9 | 25.6 |
| 2014 | 32.3 | 59.3 | 40.3 | 20.7 | 39.3 | 26.1 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

| VII | 60.5 | 64.8 |
| VII | 60.7 | 66.3 |
| VIII | 59.4 | 68.2 |
| Total | 60.5 | 63.2 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  | Table 13: TUITION EXPENDITURES by school type in rupees per month 2014 |  |  |  |  |  |  |

|  |  | Yes | No | $\begin{aligned} & \text { Don't } \\ & \text { know } \\ & \hline \end{aligned}$ |  | Yes | No | Don't know |
| Maintenance grant | 13801 | 56.0 | 35.9 | 8.1 | 14547 | 41.2 | 51.8 | 7.1 |
| Development grant | 13652 | 51.2 | 40.0 | 8.8 | 14451 | 34.3 | 58.2 | 7.6 |
| TLM grant | 13733 | 54.7 | 38.7 | 6.6 | 14251 | 7.5 | 86.8 | 5.7 |

Note for Table 19 \& 20: Grant information was not collected in ASER 2013

| Table 21: \% Schools carrying out different activities since April 2013 |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
| Type of activity | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 15.3 | 83.5 | 1.2 |
|  | White wash/plastering | 55.9 | 42.8 | 1.2 |
|  | Repair of drinking water facility | 46.8 | 51.8 | 1.4 |
|  | Repair of toilet | 38.6 | 60.0 | 1.4 |
| Purchase | Mats, Tat patti etc. | 50.5 | 47.8 | 1.7 |
|  | Charts, globes or other teaching <br> material | 62.3 | 36.2 | 1.6 |

Table 23: School Management Committee (SMC) in schools 2014

| \% Schools which said they have an SMC |  | 94.0 |
| :--- | :---: | :---: |
| Of the schools that have SMC, \% schools that had the last SMC meeting |  |  |
| Before Jan 2014 | 2.1 |  |
| Jan to June 2014 | 8.6 |  |
| July to Sept 2014 | 74.3 |  |
| After Sept 2014 | 15.0 |  |
| \% Schools that could give information about how many <br> members were present in the last meeting | 93.9 |  |
| Average number of members present in last meeting | 13 |  |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 22: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 78.9 | 88.5 |
| Of the schools which have heard of CCE, \% schools which <br> have received materials/manuals |  |  |
| For all teachers | 59.9 | 61.5 |
| For some teachers | 15.8 | 15.6 |
| For no teachers | 19.9 | 17.7 |
| Don't know | 4.4 | 5.2 |
| Of the schools which have <br> received manual, \% schools <br> which could show it | 79.8 | 77.9 |

## Chart 6: School Development Plan (SDP) in schools 2014

- \% Schools which reported not having an SDP for 2013-14
- \% Schools which reported having an SDP for 2013-14 but could not show it
- \% Schools which reported having an SDP for 2013-14 and could show it

| Age: 15-16 GIRLS | 50.3 | 31.3 | 0.4 | 18.0 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time <br> \% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $8.6 \%$ in 2006, 10.8\% in 2009, 6\% in 2011 and 5.2\% in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 1516 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 20.0 | 43.7 | 23.0 | 9.3 | 4.0 |  |  |  |  |  |  | 100 |
| \|| | 1.9 | 13.6 | 48.1 | 24.6 | 7.9 | 3.8 |  |  |  |  |  | 100 |
| III |  |  | 15.2 | 48.6 | 23.1 | 7.8 | 2.7 |  |  |  |  | 100 |
| IV | 3.0 |  |  | 15.9 | 45.7 | 24.6 | 8.2 | 2.6 |  |  |  | 100 |
| V | 2.9 |  |  |  | 13.7 | 46.5 | 23.8 | 10.4 | 2.8 |  |  | 100 |
| VI | 3.1 |  |  |  |  | 13.9 | 44.4 | 28.5 | 8.0 | 2.0 |  | 100 |
| VII | 3.1 |  |  |  |  |  | 12.5 | 50.2 | 23.1 | 9.0 | 2.0 | 100 |
| VIII | 1.5 |  |  |  |  |  |  | 12.5 | 52.7 | 27.3 | 5.9 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $48.6 \%$ children are 8 years old but there are also $15.2 \%$ who are $7,23.1 \%$ who are $9,7.8 \%$ who are 10 and $2.7 \%$ who are older.

## Chart 3: Trends over time

\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014**

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 37.5 | 32.6 | 23.8 | 4.5 | 1.6 | 100 |
| II | 16.4 | 25.7 | 31.4 | 15.8 | 10.7 | 100 |
| III | 7.0 | 18.7 | 28.1 | 23.2 | 23.1 | 100 |
| IV | 4.3 | 10.7 | 20.8 | 25.1 | 39.1 | 100 |
| V | 2.1 | 6.2 | 14.5 | 21.0 | 56.3 | 100 |
| VI | 1.6 | 5.1 | 10.9 | 19.9 | 62.4 | 100 |
| VII | 0.9 | 3.1 | 7.6 | 16.7 | 71.8 | 100 |
| VIII | 0.7 | 1.8 | 4.7 | 13.5 | 79.4 | 100 |
| Total | 9.3 | 13.4 | 18.1 | 17.4 | 41.8 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $7 \%$ children cannot even read letters, $18.7 \%$ can read letters but not more, $28.1 \%$ can read words but not Std I level text or higher, 23.2\% can read Std I level text but not Std II level text, and $23.1 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Reading Tool

> అది ఎండాకాలం.రమేష్ వాళ్ళ మామయ్య ఇందీకి బరలుదేరాడు. అతనికి దారిలో దాహం వేసింది. రమేష్కు చుట్టు ప్రక్కల ఎక్కడా నీళ్ళు కనిపించలేదు. కొంత దూరములో ఒక కొబ్బరి చెట్టు మీద కోతి కనిపించింది. రమేష్కు మెరుపులా ఒక అలోచన వచ్చింది. వెంటనే ఒక రాయి తీసి దాన్ని ఐలంగా కోతిపై విసిరాడు. కోతి కూడ కొబ్బరి కాయను తెంపి రమేష్పైకి తిరిగి విసిరింది. రమేష్ కొబ్బరి కాయను పగలగొద్టి దాని నీళ్ళు తాగి దాహం తీర్చుకున్నాడు. హాయుగా అతని మామయ్య ఇందికి బయలు దేరాడు.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| $*$ | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 89.5 | 98.1 | 93.2 | 78.6 | 91.2 | 83.4 |
| 2011 | 91.9 | 97.7 | 94.3 | 81.6 | 91.8 | 85.3 |
| 2012 | 92.6 | 94.4 | 93.5 | 80.9 | 83.2 | 81.8 |
| 2013 | 82.8 | 96.8 | 88.6 | 76.3 | 92.3 | 82.3 |
| 2014 | 74.9 | 95.4 | 83.6 | 66.0 | 89.4 | 74.3 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

## Andhra Pradesh + Telangana rubal <br> ASER 214 <br> Facilitated by PRATHAM

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| । | 30.9 | 25.1 | 41.5 | 2.1 | 0.4 | 100 |
| II | 10.4 | 17.9 | 53.8 | 16.6 | 1.3 | 100 |
| III | 4.3 | 8.4 | 49.4 | 32.1 | 5.8 | 100 |
| IV | 2.0 | 4.0 | 36.5 | 38.1 | 19.5 | 100 |
| V | 1.3 | 2.4 | 24.9 | 35.3 | 36.2 | 100 |
| VI | 0.9 | 1.5 | 23.2 | 31.4 | 43.0 | 100 |
| VII | 0.6 | 0.6 | 18.5 | 31.9 | 48.4 | 100 |
| VIII | 0.3 | 0.4 | 17.3 | 30.1 | 51.8 | 100 |
| Total | 6.8 | 7.9 | 33.6 | 26.9 | 24.9 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 4.3\% children cannot even recognize numbers 1-9, 8.4\% can recognize numbers up to 9 but not more, $49.4 \%$ can recognize numbers up to 99 but cannot do subtraction, $32.1 \%$ can do subtraction but cannot do division, and $5.8 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can <br> do division |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 60.2 | 78.8 | 67.2 | 36.1 | 48.9 | 40.5 |
| 2011 | 62.4 | 81.1 | 68.7 | 35.3 | 45.2 | 38.2 |
| 2012 | 62.6 | 76.8 | 67.8 | 37.0 | 50.4 | 41.2 |
| 2013 | 55.3 | 71.0 | 60.4 | 33.1 | 45.8 | 36.8 |
| 2014 | 51.5 | 68.6 | 57.6 | 35.1 | 38.4 | 36.2 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 39.7 | 12.9 | 19.4 | 21.7 | 6.4 | 100 |
| II | 20.0 | 14.5 | 22.4 | 21.9 | 21.2 | 100 |
| III | 13.1 | 11.1 | 25.1 | 26.2 | 24.5 | 100 |
| IV | 7.1 | 8.0 | 23.9 | 25.8 | 35.2 | 100 |
| V | 4.5 | 5.0 | 18.7 | 26.5 | 45.2 | 100 |
| VI | 3.1 | 3.8 | 16.8 | 22.8 | 53.6 | 100 |
| VII | 1.8 | 3.4 | 10.4 | 20.5 | 63.9 | 100 |
| VIII | 1.0 | 2.2 | 11.2 | 17.5 | 68.2 | 100 |
| Total | 11.8 | 7.8 | 18.7 | 23.0 | 38.7 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, $13.1 \%$ children cannot even read capital letters, $11.1 \%$ can read capital letters but not more, $25.1 \%$ can read small letters but not words or higher, $26.2 \%$ can read words but not sentences, and $24.5 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 54.0 |  |
| III | 53.5 | 58.3 |
| III | 57.6 | 61.5 |
| IV | 62.0 | 67.6 |
| V | 67.1 | 72.6 |
| VI | 65.1 | 75.8 |
| VII | 63.8 | 82.5 |
| VIII | 67.6 | 69.1 |
| Total | 61.2 |  |

| Total | 8.6 | 12.5 | 17.8 | 17.7 | 43.4 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $5.9 \%$ children cannot even read letters, $16.7 \%$ can read letters but not more, 28\% can read words but not Std I level text or higher, $24.7 \%$ can read Std I level text but not Std II level text, and $24.8 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 19.6 | 47.2 | 22.7 | 7.3 | 3.3 |  |  |  |  |  |  |  | 100 |
| \\| | 1.3 | 13.0 | 55.3 | 21.5 | 6.0 | 2.9 |  |  |  |  |  |  | 100 |
| III |  | 2.5 | 14.9 | 53.4 | 20.4 | 6.0 | 2.9 |  |  |  |  |  | 100 |
| IV | 2.6 |  |  | 15.8 | 52.0 | 20.3 | 7.8 | 1.5 |  |  |  |  | 100 |
| V | 2.5 |  |  |  | 13.8 | 52.3 | 21.1 | 7.7 | 2.6 |  |  |  | 100 |
| VI | 3.3 |  |  |  |  | 13.7 | 46.0 | 26.5 | 8.9 | 1.6 |  |  | 100 |
| VII | 3.2 |  |  |  |  |  | 12.7 | 52.0 | 20.5 | 9.6 | 2. | . 0 | 100 |
| VIII | 1.6 |  |  |  |  |  |  | 13.2 | 54.4 | 25.4 | 5. | . 5 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $53.4 \%$ children are 8 years old but there are also $14.9 \%$ who are $7,20.4 \%$ who are $9,6 \%$ who are 10 and $2.9 \%$ who are older.

## Chart 4: Trends over time <br> \% Children who can READ Std II level text by class <br> All schools 2010, 2012 and 2014

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | Can subtract | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 31.4 | 22.4 | 40.1 | 5.7 | 0.3 | 100 |
| II | 18.2 | 16.8 | 48.2 | 16.3 | 0.6 | 100 |
| III | 5.3 | 9.9 | 47.9 | 33.2 | 3.7 | 100 |
| IV | 1.2 | 3.4 | 38.3 | 41.7 | 15.5 | 100 |
| V | 1.1 | 1.5 | 22.7 | 39.0 | 35.8 | 100 |
| VI | 0.9 | 0.0 | 16.7 | 48.0 | 34.3 | 100 |
| VII | 0.7 | 0.2 | 17.0 | 43.0 | 39.1 | 100 |
| VIII | 0.0 | 0.2 | 9.5 | 30.4 | 59.9 | 100 |
| Total | 9.1 | 8.5 | 33.9 | 30.1 | 18.4 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 5.3\% children cannot even recognize numbers 1-9, 9.9\% can recognize numbers up to 9 but not more, $47.9 \%$ can recognize numbers up to 99 but cannot do subtraction, $33.2 \%$ can do subtraction but cannot do division, and $3.7 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers <br> and more |  |  |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |  |
| 2010 | 96.2 | 100.0 | 96.8 | 78.8 | 93.5 | 80.4 |  |
| 2011 | 93.8 | 97.7 | 94.5 | 81.1 | 96.5 | 83.5 |  |
| 2012 | 93.5 | 93.8 | 93.6 | 88.0 | 93.4 | 89.2 |  |
| 2013 |  |  |  |  |  |  |  |
| 2014 | 82.1 | 80.8 | 81.8 | 83.9 | 87.6 | 84.8 |  |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can <br> do division |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt.* |
| 2010 | 62.7 |  | 64.3 | 28.9 |  | 31.7 |
| 2011 | 71.7 |  | 74.3 | 38.9 |  | 41.3 |
| 2012 | 72.4 |  | 73.5 | 43.1 |  | 46.7 |
| 2013 |  |  |  |  |  |  |
| 2014 | 54.9 |  | 57.1 | 35.6 |  | 35.8 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.
Table 12: Trends over time

| Age: 15-16 GIRLS | 72.3 | 11.0 | 2.4 | 14.4 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Govt. | Pvt. | Other |  |  |  |
| Age 3 | 71.8 | 3.4 |  |  | 24.8 | 100 |  |
| Age 4 | 70.3 | 14.8 |  |  | 15.0 | 100 |  |
| Age 5 | 18.8 | 6.6 | 52.6 | 16.5 | 0.6 | 5.0 | 100 |
| Age 6 | 5.9 | 4.2 | 66.9 | 20.0 | 0.8 | 2.2 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $5 \%$ in 2006, 6.4\% in 2009, 5.6\% in 2011 and $4.1 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 26.1 | 41.1 | 23.1 | 6.8 | 2.9 |  |  |  |  |  |  |  | 100 |
| \\| | 2.8 | 12.0 | 43.7 | 29.8 | 7.1 | 4.7 |  |  |  |  |  |  | 100 |
| III |  | 2.2 | 16.1 | 41.4 | 25.2 | 10.3 | 4.8 |  |  |  |  |  | 100 |
| IV | 3.1 |  |  | 12.7 | 32.7 | 37.1 | 7.7 | 6.8 |  |  |  |  | 100 |
| V | 4.0 |  |  |  | 8.6 | 40.2 | 29.0 | 12.2 | 6.1 |  |  |  | 100 |
| VI | 2.4 |  |  |  |  | 11.0 | 28.9 | 41.2 | 11.5 | 5.1 |  |  | 100 |
| VII | 4.0 |  |  |  |  |  | 8.8 | 37.3 | 34.3 | 11.8 |  | 3.8 | 100 |
| VIII | 3.1 |  |  |  |  |  |  | 12.8 | 37.5 | 36.9 | 6.6 | 3.1 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $41.4 \%$ children are 8 years old but there are also $16.1 \%$ who are $7,25.2 \%$ who are $9,10.3 \%$ who are 10 and $4.8 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^29]Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 48.0 | 30.7 | 15.3 | 3.6 | 2.5 | 100 |
| II | 24.6 | 32.8 | 25.6 | 10.5 | 6.6 | 100 |
| III | 14.7 | 23.6 | 28.3 | 18.7 | 14.8 | 100 |
| IV | 8.7 | 16.0 | 27.6 | 22.1 | 25.6 | 100 |
| V | 6.1 | 13.3 | 22.3 | 24.8 | 33.5 | 100 |
| VI | 3.6 | 8.4 | 20.3 | 24.1 | 43.6 | 100 |
| VII | 2.6 | 6.4 | 14.7 | 22.9 | 53.3 | 100 |
| VIII | 2.0 | 3.1 | 9.5 | 21.9 | 63.5 | 100 |
| Total | 16.2 | 18.4 | 20.8 | 17.5 | 27.0 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $14.7 \%$ children cannot even read letters, $23.6 \%$ can read letters but not more, $28.3 \%$ can read words but not Std I level text or higher, 18.7\% can read Std I level text but not Std II level text, and $14.8 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 86.7 | 85.7 | 86.6 | 74.5 | 81.1 | 75.3 |
| 2011 | 82.2 | 94.2 | 84.0 | 68.9 | 74.2 | 69.8 |
| 2012 | 79.2 | 91.2 | 81.6 | 56.3 | 77.0 | 60.2 |
| 2013 | 73.8 | 86.7 | 76.7 | 56.8 | 74.1 | 59.6 |
| 2014 | 72.3 | 87.1 | 75.3 | 59.0 | 75.3 | 61.8 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can read at least Std I level text |  |  | \% Children in Std V who can read Std II level text |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt.* | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 59.3 | 73.7 | 61.0 | 42.6 | 57.0 | 45.1 |
| 2011 | 50.2 | 65.5 | 52.2 | 34.2 | 48.0 | 36.1 |
| 2012 | 46.8 | 72.7 | 50.4 | 33.3 | 52.9 | 36.4 |
| 2013 | 42.9 | 70.5 | 47.0 | 31.2 | 53.0 | 34.9 |
| 2014 | 42.9 | 72.9 | 47.6 | 30.6 | 52.2 | 33.4 |

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| 1 | 42.5 | 37.5 | 17.4 | 2.2 | 0.4 | 100 |
| \\| | 17.8 | 42.2 | 30.1 | 9.3 | 0.6 | 100 |
| III | 9.4 | 32.3 | 38.1 | 17.3 | 2.9 | 100 |
| IV | 6.7 | 22.7 | 40.1 | 23.2 | 7.4 | 100 |
| V | 4.2 | 17.8 | 39.1 | 27.2 | 11.7 | 100 |
| VI | 3.0 | 10.4 | 39.9 | 30.2 | 16.5 | 100 |
| VII | 2.0 | 9.1 | 36.3 | 32.1 | 20.6 | 100 |
| VIII | 1.5 | 5.1 | 34.5 | 34.2 | 24.6 | 100 |
| Total | 13.0 | 24.1 | 33.5 | 20.2 | 9.2 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $9.4 \%$ children cannot even recognize numbers 1-9, $32.3 \%$ can recognize numbers up to 9 but not more, $38.1 \%$ can recognize numbers up to 99 but cannot do subtraction, $17.3 \%$ can do subtraction but cannot do division, and $2.9 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can <br> do division |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 44.9 | 66.0 | 47.4 | 22.6 | 36.9 | 25.1 |
| 2011 | 34.9 | 51.5 | 37.1 | 12.5 | 24.6 | 14.2 |
| 2012 | 33.0 | 66.5 | 37.6 | 8.9 | 26.9 | 11.7 |
| 2013 | 25.6 | 57.7 | 30.3 | 7.9 | 27.5 | 11.2 |
| 2014 | 25.7 | 58.4 | 30.8 | 9.0 | 30.3 | 11.8 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.
Table 12: Trends over time
\% Children in Std I-V and Std VI-VIII by school type and

| TLM grant | 458 | 51.3 | 43.0 | 5.7 | 539 | 8.4 | 87.0 | 4.6 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 15.2 | 83.1 | 1.7 |
|  | White wash/plastering | 26.7 | 71.9 | 1.4 |
|  | Repair of drinking water facility | 24.2 | 74.4 | 1.4 |
|  | Repair of toilet | 18.5 | 80.1 | 1.4 |
| Purchase | Mats, Tat patti etc. | 23.0 | 75.6 | 1.4 |
|  | Charts, globes or other teaching <br> material | 37.7 | 61.3 | 1.0 |

## Table 22: School Management Committee (SMC) in schools 2014

| \% Schools which said they have an SMC | 97.8 |
| :--- | :---: | :---: |
| Of the schools that have SMC, \% schools that had the last SMC meeting |  |
| Before Jan 2014 | 3.7 |
| Jan to June 2014 | 27.0 |
| July to Sept 2014 | 61.3 |
| After Sept 2014 | 8.1 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 93.0 |
| Average number of members present in last meeting | 13 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 59.0 | 74.6 |
| Of the schools which have heard of CCE, \% schools which <br> have received materials/manuals |  |  |
| For all teachers | 60.6 | 57.1 |
| For some teachers | 16.5 | 16.8 |
| For no teachers | 19.6 | 19.6 |
| Don't know | 3.4 | 6.6 |
| Of the schools which have <br> received manual, $\%$ schools <br> which could show it | 78.8 | 73.6 |

acilitated by PRATHAM

## ANALYSIS BASED ON DATA FROM HOUSEHOLDS. 38 OUT OF 38 DISTRICTS

 Data has not been presented where sample size was insufficient.
## School enrollment and out of school children

Table 1: \% Children in different types of schools 2014

| Age group | Govt. | Pvt. | Other | Not in <br> school | Total |
| :--- | ---: | ---: | :---: | :---: | :---: |
| Age: 6-14 ALL | 82.4 | 12.0 | 1.5 | 4.1 | 100 |
| Age: 7-16 ALL | 81.3 | 11.4 | 1.3 | 6.1 | 100 |
| Age: 7-10 ALL | 80.1 | 14.8 | 1.8 | 3.3 | 100 |
| Age: 7-10 BOYS | 76.7 | 18.7 | 1.7 | 3.0 | 100 |
| Age: 7-10 GIRLS | 83.9 | 10.6 | 1.8 | 3.8 | 100 |
| Age: 11-14 ALL | 83.9 | 9.3 | 1.0 | 5.7 | 100 |
| Age: 11-14 BOYS | 81.1 | 12.3 | 0.8 | 5.8 | 100 |
| Age: 11-14 GIRLS | 86.7 | 6.5 | 1.2 | 5.7 | 100 |
| Age: 15-16 ALL | 77.4 | 5.5 | 0.8 | 16.3 | 100 |
| Age: 15-16 BOYS | 75.3 | 6.9 | 0.8 | 17.0 | 100 |
| Age: 15-16 GIRLS | 79.5 | 4.1 | 0.8 | 15.6 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> anganwadi <br> ang LKG/ | In school <br> UKG |  |  |  | Not in <br> school <br> or pre- <br> Govt. |  |  |  | Potal | Tothool | Other |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 51.1 | 2.0 |  |  | 46.9 | 100 |  |  |  |  |  |  |
| Age 4 | 60.8 | 6.7 |  |  | 32.6 | 100 |  |  |  |  |  |  |
| Age 5 | 36.0 | 9.1 | 35.3 | 4.1 | 1.7 | 13.8 | 100 |  |  |  |  |  |
| Age 6 | 11.9 | 7.2 | 63.7 | 6.9 | 1.8 | 8.4 | 100 |  |  |  |  |  |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $17.6 \%$ in 2006, $6 \%$ in 2009, $4.5 \%$ in 2011 and $5.7 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 22.6 | 37.7 | 20.6 | 10.9 | 8.2 |  |  |  |  |  |  |  | 100 |
| \\| | 3.9 | 15.8 | 30.9 | 27.5 | 8.3 | 9.2 | 4.4 |  |  |  |  |  | 100 |
| III |  | . 8 | 14.2 | 32.7 | 20.5 | 17.8 | 10.1 |  |  |  |  |  | 100 |
| IV | 6.0 |  |  | 17.8 | 21.3 | 32.9 | 9.2 | 8.8 | 4.0 |  |  |  | 100 |
| V | 1.7 |  |  | 7.2 | 9.7 | 34.5 | 19.6 | 17.6 | 5.3 | 4.5 |  |  | 100 |
| VI | 6.4 |  |  |  |  | 17.8 | 21.9 | 33.9 | 10.6 | 6.2 | 3.2 |  | 100 |
| VII | 1.8 |  |  |  |  | 7.2 | 9.5 | 36.5 | 22.9 | 14.2 | 6.0 | 1.8 | 100 |
| VIII | 5.5 |  |  |  |  |  |  | 19.0 | 29.9 | 29.1 | 12.7 | 3.8 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $32.7 \%$ children are 8 years old but there are also $14.2 \%$ who are $7,20.5 \%$ who are $9,17.8 \%$ who are 10 and $10.1 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^31]Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 65.7 | 19.7 | 5.0 | 3.2 | 6.5 | 100 |
| II | 39.2 | 31.3 | 10.5 | 6.5 | 12.5 | 100 |
| III | 26.2 | 28.3 | 13.8 | 10.0 | 21.8 | 100 |
| IV | 12.7 | 22.6 | 15.6 | 13.4 | 35.6 | 100 |
| V | 9.7 | 14.7 | 13.0 | 14.6 | 48.1 | 100 |
| VI | 5.4 | 11.1 | 9.7 | 14.9 | 58.9 | 100 |
| VII | 3.4 | 8.2 | 7.1 | 11.8 | 69.5 | 100 |
| VIII | 2.3 | 4.8 | 5.7 | 10.0 | 77.2 | 100 |
| Total | 23.7 | 18.6 | 10.1 | 10.1 | 37.6 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $26.2 \%$ children cannot even read letters, $28.3 \%$ can read letters but not more, $13.8 \%$ can read words but not Std I level text or higher, $10 \%$ can read Std I level text but not Std II level text, and $21.8 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 82.7 | 90.8 | 83.3 | 70.8 | 85.4 | 71.5 |
| 2011 | 73.0 | 91.2 | 74.1 | 59.7 | 88.8 | 61.0 |
| 2012 | 67.7 | 90.6 | 69.4 | 50.5 | 86.2 | 52.9 |
| 2013 | 65.4 | 94.3 | 68.2 | 47.9 | 87.0 | 51.0 |
| 2014 | 55.5 | 93.4 | 60.8 | 39.8 | 86.6 | 45.6 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

रामपुर में एक मैदान था। वहाँ कुछ नहीं उगता था। वहाँ कोई खेलने नहीं जाता था। एक दिन कुछ लोग आए। उन्होंने गाँव के लोगों को बुलाया। सबने मिलकर तय किया कि यहाँ बग़ीचा बनाया जाए। खाद मंगाकर हर तरह के पौधे लगाए गए। सही समय पर पानी दिया गया। आज वहाँ एक सुंदर बग़ीचा है। इसलिए वहाँ सभी खेलने जाते हैं।

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt.* |
| 2010 | 67.7 | 81.3 | 68.2 | 57.9 | 70.9 | 58.4 |
| 2011 | 53.9 | 75.1 | 54.8 | 48.4 | 74.5 | 49.6 |
| 2012 | 47.1 | 61.0 | 48.0 | 43.1 | 74.8 | 44.4 |
| 2013 | 45.8 | 84.9 | 48.5 | 41.7 | 78.5 | 43.9 |
| 2014 | 43.9 | 90.9 | 48.9 | 44.6 | 87.8 | 48.2 | | * This is the weighted average for children in government and private schools only. |
| :--- |

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std ॥ level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 53.4 | 30.1 | 9.6 | 4.3 | 2.7 | 100 |
| II | 25.2 | 41.9 | 18.5 | 7.7 | 6.7 | 100 |
| III | 13.4 | 37.1 | 25.5 | 11.4 | 12.7 | 100 |
| IV | 6.5 | 25.9 | 26.7 | 17.6 | 23.3 | 100 |
| V | 5.0 | 16.5 | 25.4 | 18.5 | 34.8 | 100 |
| VI | 2.7 | 10.1 | 21.6 | 21.7 | 43.9 | 100 |
| VII | 1.3 | 7.2 | 18.8 | 19.9 | 52.7 | 100 |
| VIII | 1.3 | 3.9 | 16.6 | 17.1 | 61.1 | 100 |
| Total | 16.1 | 23.3 | 20.0 | 14.0 | 26.7 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 13.4\% children cannot even recognize numbers 1-9, $37.1 \%$ can recognize numbers up to 9 but not more, $25.5 \%$ can recognize numbers up to 99 but cannot do subtraction, $11.4 \%$ can do subtraction but cannot do division, and $12.7 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 82.0 | 92.4 | 82.7 | 71.2 | 84.4 | 71.8 |
| 2011 | 75.9 | 91.5 | 76.9 | 58.0 | 86.3 | 59.4 |
| 2012 | 74.5 | 91.1 | 75.8 | 54.1 | 88.2 | 56.4 |
| 2013 | 73.8 | 95.5 | 76.0 | 51.6 | 86.7 | 54.4 |
| 2014 | 71.6 | 95.1 | 74.9 | 44.3 | 87.6 | 49.6 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std V who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 66.7 | 84.4 | 67.4 | 51.0 | 68.2 | 51.7 |
| 2011 | 48.7 | 72.6 | 49.7 | 35.7 | 61.5 | 36.9 |
| 2012 | 42.1 | 57.8 | 43.1 | 30.0 | 60.6 | 31.3 |
| 2013 | 38.2 | 77.9 | 41.0 | 32.2 | 64.9 | 34.1 |
| 2014 | 36.4 | 81.1 | 41.1 | 31.4 | 72.4 | 34.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

| IV | 25.9 | 15.1 | 24.7 | 21.0 | 13.5 | 100 |
| V | 19.0 | 11.5 | 24.2 | 26.7 | 18.7 | 100 |
| VI | 13.4 | 7.9 | 24.5 | 29.9 | 24.4 | 100 |
| VII | 8.7 | 7.6 | 18.4 | 31.4 | 33.9 | 100 |
| VIII | 5.6 | 5.6 | 17.4 | 28.0 | 43.4 | 100 |
| Total | 33.8 | 11.3 | 18.0 | 19.3 | 17.6 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 41.7\% children cannot even read capital letters, $16.4 \%$ can read capital letters but not more, $19.6 \%$ can read small letters but not words or higher, $13.1 \%$ can read words but not sentences, and $9.3 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 70.1 | 38.0 |
| II | 54.8 | 43.1 |
| III | 59.2 | 53.3 |
| IV | 60.2 | 54.8 |
| V | 59.3 | 54.5 |
| VI | 57.6 | 54.8 |
| VIII | 60.6 | 53.2 |
| VIII | 58.3 | 56.4 |
| Total | 59.4 | 53.3 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.
Table 12: Trends over time
\% Children in Std I-V and Std VI-VIII by school type and
TUITION 2011-2014

| Std | Category | 2011 | 2012 | 2013 | 2014 |

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 38 OUT OF 38 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Primary schools <br> (Std I-IVN) | 265 | 252 | 284 | 228 | 224 |
| Upper primary schools <br> (Std I-VIIINIII) | 702 | 770 | 773 | 854 | 864 |
| Total schools visited | 967 | 1022 | 1057 | 1082 | 1088 |

Table 15: Student and teacher attendance on the day of visit 2010-2014

| TLM grant | 993 | 25.5 | 68.7 | 5.8 | 1048 | 2.0 | 91.8 | 6.2 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | $\%$ Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 24.6 | 73.8 | 1.6 |
|  | White wash/plastering | 70.9 | 27.5 | 1.6 |
|  | Repair of drinking water facility | 71.4 | 26.8 | 1.8 |
|  | Repair of toilet | 49.6 | 48.9 | 1.5 |
| Purchase | Mats, Tat patti etc. | 39.1 | 58.8 | 2.1 |
|  | Charts, globes or other teaching <br> material | 54.3 | 43.9 | 1.9 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
91.0

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 2.9 |
| ---: | :---: |
| Jan to June 2014 | 10.8 |
| July to Sept 2014 | 71.2 |
| After Sept 2014 | 15.1 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 89.4 |
| Average number of members present in last meeting | 12 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 87.9 | 92.6 |
| Of the schools which have heard of CCE, \% schools which <br> have received materials/manuals |  |  |

 Data has not been presented where sample size was insufficient.
## School enrollment and out of school children

Table 1: \% Children in different types of schools 2014

| Age group | Govt. | Pvt. | Other | Not in <br> school | Total |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Age: 6-14 ALL | 80.0 | 17.8 | 0.1 | 2.0 | 100 |
| Age: 7-16 ALL | 79.6 | 16.2 | 0.1 | 4.2 | 100 |
| Age: 7-10 ALL | 78.1 | 20.7 | 0.1 | 1.1 | 100 |
| Age: 7-10 BOYS | 76.6 | 22.1 | 0.0 | 1.3 | 100 |
| Age: 7-10 GIRLS | 79.6 | 19.2 | 0.2 | 1.0 | 100 |
| Age: 11-14 ALL | 82.5 | 14.2 | 0.1 | 3.2 | 100 |
| Age: 11-14 BOYS | 79.5 | 17.1 | 0.0 | 3.4 | 100 |
| Age: 11-14 GIRLS | 85.4 | 11.5 | 0.2 | 3.0 | 100 |
| Age: 15-16 ALL | 76.2 | 11.1 | 0.0 | 12.7 | 100 |
| Age: $15-16$ BOYS | 72.2 | 13.8 | 0.0 | 14.0 | 100 |
| Age: $15-16$ GIRLS | 79.8 | 8.7 | 0.0 | 11.6 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi or anganwadi | In LKG/ UKG | In school |  |  | Not in school or preschool | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Govt. | Pvt. | Other |  |  |
| Age 3 | 73.3 | 6.9 |  |  |  | 19.8 | 100 |
| Age 4 | 71.3 | 17.5 |  |  |  | 11.3 | 100 |
| Age 5 | 35.8 | 12.3 | 24.9 | 19.9 | 0.2 | 6.9 | 100 |
| Age 6 | 6.2 | 3.1 | 67.4 | 21.0 | 0.2 | 2.2 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 13.6\% in 2006, 4.9\% in 2009, 4.3\% in 2011 and 3\% in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 21.3 | 52.6 | 20.9 | 5.3 |  |  |  |  |  |  |  |  | 100 |
| \|| | 5.5 | 13.2 | 44.7 | 30.4 | 6.3 |  |  |  |  |  |  |  | 100 |
| III |  | . 7 | 13.3 | 44.0 | 34.0 | 7.1 |  |  |  |  |  |  | 100 |
| IV | 2.3 |  |  | 13.8 | 37.5 | 40.8 | 5.7 |  |  |  |  |  | 100 |
| V | 3.5 |  |  |  | 8.5 | 44.3 | 34.3 | 7.1 | 2.2 |  |  |  | 100 |
| VI | 1.6 |  |  |  |  | 9.6 | 32.8 | 46.2 | 7.5 | 2.3 |  |  | 100 |
| VII | 2.0 |  |  |  |  |  | 8.2 | 40.2 | 39.8 | 7.5 |  | 2.3 | 100 |
| VIII | 1.9 |  |  |  |  |  |  | 9.8 | 36.5 | 42.9 | 7.3 | 1.7 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $44 \%$ children are 8 years old but there are also $13.3 \%$ who are $7,34 \%$ who are 9 and 7.1\% who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 49.9 | 38.6 | 6.6 | 2.3 | 2.7 | 100 |
| II | 25.3 | 42.0 | 15.0 | 8.8 | 9.0 | 100 |
| III | 12.7 | 32.4 | 16.1 | 17.5 | 21.3 | 100 |
| IV | 8.8 | 21.6 | 13.5 | 18.6 | 37.6 | 100 |
| V | 4.5 | 13.7 | 12.4 | 17.0 | 52.4 | 100 |
| VI | 2.3 | 9.4 | 9.0 | 16.8 | 62.5 | 100 |
| VII | 1.4 | 6.0 | 6.3 | 16.0 | 70.3 | 100 |
| VIII | 1.8 | 4.6 | 6.0 | 11.6 | 76.0 | 100 |
| Total | 13.2 | 21.1 | 10.7 | 13.6 | 41.4 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $12.7 \%$ children cannot even read letters, $32.4 \%$ can read letters but not more, $16.1 \%$ can read words but not Std I level text or higher, 17.5\% can read Std I level text but not Std II level text, and $21.3 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 94.2 | 97.6 | 94.6 | 79.7 | 90.6 | 80.9 |
| 2011 | 86.6 | 96.8 | 88.2 | 65.2 | 80.4 | 66.8 |
| 2012 | 82.8 | 97.3 | 85.5 | 54.8 | 81.9 | 59.3 |
| 2013 | 72.4 | 92.2 | 76.1 | 48.5 | 79.4 | 53.6 |
| 2014 | 70.7 | 85.3 | 74.7 | 47.1 | 82.6 | 54.9 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

## राजू नाम का एक लड़का था। उसकी एक बड़ी बहन व एक छोटा भाई था। उसका भाई गाँव के पास के विद्यालय में पढ़ने जाता था। वह खूब मेहनत करता था। उसकी बहन बहुत अच्छी खिलाड़ी थी। उसे लंबी दौड़ लगाना अच्छा लगता था। वे तीनों रोज़ साथ-साथ मौज-मस्ती करते थे।

Table 6: Trends over time

| 2011 | 53.0 | 69.4 | 54.7 | 42.6 | 56.6 | 43.7 |
| 2012 | 50.9 | 77.5 | 54.3 | 44.0 | 64.2 | 46.2 |
| 2013 | 50.0 | 82.2 | 56.1 | 45.5 | 80.3 | 49.8 |
| 2014 | 50.9 | 81.0 | 56.2 | 47.1 | 76.6 | 52.4 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.
acilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 43.2 | 43.5 | 11.2 | 1.0 | 1.2 | 100 |
| \\| | 19.0 | 53.3 | 24.3 | 2.7 | 0.6 | 100 |
| III | 7.2 | 47.5 | 31.0 | 12.3 | 2.0 | 100 |
| IV | 3.9 | 33.1 | 37.5 | 17.7 | 7.8 | 100 |
| V | 2.5 | 20.3 | 37.9 | 21.3 | 18.0 | 100 |
| VI | 1.3 | 15.8 | 33.3 | 27.5 | 22.1 | 100 |
| VII | 1.7 | 10.8 | 38.5 | 26.5 | 22.6 | 100 |
| VIII | 1.5 | 8.6 | 34.5 | 25.8 | 29.7 | 100 |
| Total | 10.0 | 29.2 | 31.2 | 16.8 | 12.9 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $7.2 \%$ children cannot even recognize numbers 1-9, $47.5 \%$ can recognize numbers up to 9 but not more, $31 \%$ can recognize numbers up to 99 but cannot do subtraction, $12.3 \%$ can do subtraction but cannot do division, and $2 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 94.7 | 97.8 | 95.1 | 73.9 | 83.6 | 74.9 |
| 2011 | 85.8 | 95.8 | 87.4 | 56.3 | 73.9 | 58.2 |
| 2012 | 86.1 | 99.1 | 88.5 | 46.5 | 73.4 | 50.9 |
| 2013 | 82.5 | 94.3 | 84.7 | 41.7 | 74.4 | 47.1 |
| 2014 | 78.2 | 88.2 | 81.0 | 38.6 | 69.6 | 45.3 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std $V$ who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 58.7 | 73.0 | 59.9 | 37.8 | 53.0 | 38.9 |
| 2011 | 40.8 | 61.9 | 42.9 | 17.3 | 36.0 | 18.8 |
| 2012 | 22.6 | 52.3 | 26.4 | 13.1 | 22.3 | 14.1 |
| 2013 | 24.7 | 51.8 | 29.8 | 13.2 | 33.5 | 15.7 |
| 2014 | 21.3 | 45.1 | 25.6 | 14.1 | 35.7 | 18.0 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

## Chhattisgarh rural

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 60.7 | 18.8 | 14.9 | 4.5 | 1.2 | 100 |
| II | 38.8 | 27.3 | 27.6 | 3.7 | 2.6 | 100 |
| III | 30.4 | 23.2 | 37.3 | 5.1 | 4.0 | 100 |
| IV | 22.8 | 23.1 | 37.6 | 10.0 | 6.6 | 100 |
| V | 14.6 | 18.1 | 41.0 | 15.6 | 10.7 | 100 |
| VI | 10.2 | 12.6 | 41.0 | 18.9 | 17.4 | 100 |
| VIII | 6.5 | 13.0 | 37.6 | 21.4 | 21.5 | 100 |
| VIII | 4.8 | 9.9 | 30.0 | 22.9 | 32.4 | 100 |
| Total | 23.5 | 18.3 | 33.5 | 12.7 | 11.9 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 30.4\% children cannot even read capital letters, $23.2 \%$ can read capital letters but not more, $37.3 \%$ can read small letters but not words or higher, $5.1 \%$ can read words but not sentences, and $4 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read words, \% children who can tell meanings of the words | Of those who can read sentences, \% children who can tell meanings of the sentences |
| :---: | :---: | :---: |

# Chhattisgarh rural 

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 15 OUT OF 16 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Primary schools <br> (Std I-IVN) | 301 | 351 | 388 | 418 | 431 |
| Upper primary schools <br> (Std I-VIIINIII) | 124 | 41 | 42 | 20 | 11 |
| Total schools visited | 425 | 392 | 430 | 438 | 442 |

| Table 15: Student and teacher attendance on the day of visit |
| :--- |
| 2010-2014 |
| All schools |

| Development grant | 423 | 63.1 | 32.6 | 4.3 | 428 | 23.6 | 66.4 | 10.1 |
| TLM grant | 423 | 64.5 | 32.4 | 3.1 | 410 | 4.2 | 90.5 | 5.4 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 11.9 | 87.9 | 0.2 |
|  | White wash/plastering | 87.4 | 12.1 | 0.5 |
|  | Repair of drinking water facility | 48.0 | 51.0 | 0.9 |
|  | Repair of toilet | 31.8 | 67.5 | 0.7 |
| Purchase | Mats, Tat patti etc. | 61.2 | 37.6 | 1.2 |
|  | Charts, globes or other teaching <br> material | 75.2 | 23.6 | 1.1 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
99.8

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 0.7 |
| ---: | :---: |
| Jan to June 2014 | 4.2 |
| July to Sept 2014 | 94.2 |
| After Sept 2014 | 0.9 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 96.8 |
| Average number of members present in last meeting | 11 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 99.1 | 98.6 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 80.1 | 64.2 |
| :--- | :---: | :---: |
| For some teachers | 10.5 | 14.8 |
| For no teachers | 6.8 | 15.9 |
| Don't know | 2.6 | 5.2 |
| Of the schools which have <br> received manual, \% schools <br> which could show it | 93.0 | 84.7 |

## School enrollment and out of school children

Table 1: \% Children in different types of schools 2014

| Age group | Govt. | Pvt. | Other | Not in <br> school | Total |
| :--- | ---: | ---: | :---: | :---: | :---: |
| Age: 6-14 ALL | 83.4 | 13.3 | 0.1 | 3.2 | 100 |
| Age: 7-16 ALL | 78.8 | 14.9 | 0.1 | 6.2 | 100 |
| Age: 7-10 ALL | 87.2 | 11.2 | 0.1 | 1.5 | 100 |
| Age: 7-10 BOYS | 85.6 | 12.7 | 0.1 | 1.7 | 100 |
| Age: 7-10 GIRLS | 89.0 | 9.5 | 0.2 | 1.3 | 100 |
| Age: 11-14 ALL | 79.2 | 15.5 | 0.1 | 5.3 | 100 |
| Age: 11-14 BOYS | 78.8 | 17.5 | 0.1 | 3.6 | 100 |
| Age: 11-14 GIRLS | 79.6 | 13.2 | 0.0 | 7.2 | 100 |
| Age: 15-16 ALL | 52.8 | 24.1 | 0.1 | 23.0 | 100 |
| Age: 15-16 BOYS | 56.3 | 26.7 | 0.3 | 16.8 | 100 |
| Age: $15-16$ GIRLS | 48.7 | 21.1 | 0.0 | 30.2 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi or anganwadi | In LKG/ <br> UKG | In school |  |  | Not in school or preschool | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Govt. | Pvt. | Other |  |  |
| Age 3 | 75.9 | 4.5 |  |  |  | 19.6 | 100 |
| Age 4 | 78.1 | 10.6 |  |  |  | 11.2 | 100 |
| Age 5 | 36.1 | 9.3 | 41.4 | 5.8 | 0.2 | 7.2 | 100 |
| Age 6 | 4.2 | 2.7 | 78.9 | 11.8 | 0.2 | 2.2 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $11.7 \%$ in 2006, $10.2 \%$ in 2009, $6.1 \%$ in 2011 and $7.2 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 26.4 | 63.7 | 7.6 | 2.4 |  |  |  |  |  |  |  |  | 100 |
| \|| | 1.9 | 11.6 | 72.4 | 11.7 | 2.4 |  |  |  |  |  |  |  | 100 |
| III | 1. | 6 | 13.6 | 70.8 | 11.9 | 2.2 |  |  |  |  |  |  | 100 |
| IV | 2.9 |  |  | 10.6 | 64.4 | 18.8 | 3.3 |  |  |  |  |  | 100 |
| V | 2.6 |  |  |  | 6.6 | 69.6 | 15.7 | 5.6 |  |  |  |  | 100 |
| VI | 2.2 |  |  |  |  | 8.0 | 63.2 | 20.5 | 6.1 |  |  |  | 100 |
| VII | 3.4 |  |  |  |  |  | 7.5 | 62.6 | 19.2 | 5.4 | 2. | . 0 | 100 |
| VIII | 2.3 |  |  |  |  |  |  | 9.9 | 65.0 | 17.8 | 5. | 2 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $70.8 \%$ children are 8 years old but there are also $13.6 \%$ who are $7,11.9 \%$ who are 9 and $2.2 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

| IV | 6.7 | 13.5 | 21.5 | 21.8 | 36.4 | 100 |
| V | 4.2 | 10.4 | 14.0 | 24.9 | 46.6 | 100 |
| VI | 2.7 | 7.5 | 10.1 | 24.4 | 55.3 | 100 |
| VII | 2.6 | 3.6 | 8.1 | 15.0 | 70.7 | 100 |
| VIII | 1.6 | 3.9 | 5.8 | 11.1 | 77.6 | 100 |
| Total | 12.7 | 15.0 | 14.4 | 16.5 | 41.3 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $12.7 \%$ children cannot even read letters, $22.6 \%$ can read letters but not more, $26 \%$ can read words but not Std I level text or higher, 18.3\% can read Std I level text but not Std II level text, and 20.3\% can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 90.6 | 98.0 | 91.2 | 76.6 | 88.1 | 77.6 |
| 2011 | 88.0 | 95.3 | 88.7 | 78.8 | 86.6 | 79.5 |
| 2012 | 83.7 | 94.7 | 84.8 | 69.8 | 78.2 | 70.5 |
| 2013 | 79.6 | 89.2 | 80.9 | 62.9 | 75.6 | 64.3 |
| 2014 | 74.2 | 90.7 | 75.7 | 62.2 | 85.0 | 64.7 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 67.0 | 78.2 | 68.0 | 43.5 | 63.9 | 45.5 |
| 2011 | 63.6 | 79.2 | 64.8 | 47.7 | 64.3 | 49.1 |
| 2012 | 58.0 | 71.7 | 59.2 | 46.3 | 66.3 | 47.7 |
| 2013 | 60.4 | 75.7 | 62.2 | 48.1 | 68.5 | 50.6 |
| 2014 | 55.3 | 81.6 | 58.3 | 44.6 | 64.1 | 46.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | $\begin{gathered} \text { Not even } \\ 1-9 \\ \hline \end{gathered}$ | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 55.7 | 34.3 | 8.5 | 1.3 | 0.2 | 100 |
| ॥ | 23.6 | 46.7 | 24.7 | 4.3 | 0.7 | 100 |
| III | 11.6 | 36.7 | 36.8 | 12.9 | 2.0 | 100 |
| IV | 7.4 | 25.1 | 38.0 | 23.0 | 6.5 | 100 |
| V | 4.0 | 19.9 | 34.5 | 25.6 | 16.1 | 100 |
| VI | 3.6 | 13.0 | 35.5 | 28.6 | 19.4 | 100 |
| VII | 2.1 | 9.6 | 36.0 | 24.4 | 27.9 | 100 |
| VIII | 2.1 | 7.9 | 33.3 | 24.2 | 32.6 | 100 |
| Total | 12.5 | 23.4 | 31.6 | 18.9 | 13.7 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $11.6 \%$ children cannot even recognize numbers 1-9, $36.7 \%$ can recognize numbers up to 9 but not more, $36.8 \%$ can recognize numbers up to 99 but cannot do subtraction, $12.9 \%$ can do subtraction but cannot do division, and $2 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std $V$ who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 47.9 | 61.5 | 49.1 | 19.6 | 34.0 | 21.1 |
| 2011 | 42.9 | 65.0 | 44.7 | 22.1 | 28.5 | 22.6 |
| 2012 | 30.9 | 51.9 | 32.7 | 12.4 | 34.0 | 13.9 |
| 2013 | 30.5 | 65.3 | 34.4 | 15.0 | 32.0 | 17.1 |
| 2014 | 25.5 | 60.6 | 29.5 | 13.9 | 34.8 | 16.1 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Note: For 3 and 4 year old children, only pre-school status is recorded.
ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $8.4 \%$ in 2006, $4.3 \%$ in 2009, $2.1 \%$ in 2011 and $3.3 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 28.0 | 39.5 | 22.5 | 7.7 | 2.3 |  |  |  |  |  |  |  | 100 |
| \|| | 5.1 | 21.8 | 38.9 | 23.8 | 6.8 | 3.7 |  |  |  |  |  |  | 100 |
| III | 4.9 |  | 19.4 | 43.0 | 21.8 | 8.1 | 2.9 |  |  |  |  |  | 100 |
| IV |  | 3 | 5.9 | 24.7 | 32.2 | 26.2 | 5.8 | 3.9 |  |  |  |  | 100 |
| V | 1.6 |  |  | 5.4 | 16.3 | 41.4 | 22.3 | 9.4 | 3.6 |  |  |  | 100 |
| VI | 5.4 |  |  |  |  | 22.3 | 33.6 | 28.3 | 6.3 | 4.1 |  |  | 100 |
| VII | 5.4 |  |  |  |  |  | 18.0 | 42.7 | 22.8 | 8.3 | 2.9 |  | 100 |
| VIII | 6.1 |  |  |  |  |  |  | 22.4 | 36.5 | 25.4 | 7.9 | 1.7 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $43 \%$ children are 8 years old but there are also $19.4 \%$ who are $7,21.8 \%$ who are 9 , $8.1 \%$ who are 10 and $2.9 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 27.7 | 26.8 | 19.1 | 13.7 | 12.7 | 100 |
| II | 12.3 | 20.9 | 17.5 | 19.5 | 29.9 | 100 |
| III | 6.7 | 14.3 | 15.0 | 18.7 | 45.4 | 100 |
| IV | 4.0 | 8.7 | 11.0 | 16.2 | 60.2 | 100 |
| V | 3.2 | 6.4 | 7.6 | 14.7 | 68.1 | 100 |
| VI | 2.0 | 4.6 | 4.6 | 12.0 | 76.8 | 100 |
| VII | 2.1 | 2.6 | 4.0 | 10.6 | 80.8 | 100 |
| VIII | 0.9 | 2.7 | 3.4 | 7.8 | 85.3 | 100 |
| Total | 7.5 | 11.0 | 10.4 | 14.2 | 57.0 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $6.7 \%$ children cannot even read letters, $14.3 \%$ can read letters but not more, 15\% can read words but not Std I level text or higher, $18.7 \%$ can read Std I level text but not Std II level text, and $45.4 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 91.3 | 97.4 | 94.3 | 78.0 | 92.8 | 83.9 |
| 2011 | 83.2 | 96.2 | 89.7 | 68.9 | 90.4 | 78.4 |
| 2012 | 72.7 | 97.5 | 87.0 | 51.5 | 91.4 | 72.0 |
| 2013 | 71.0 | 97.6 | 86.5 | 56.7 | 92.8 | 77.3 |
| 2014 | 73.8 | 97.0 | 87.8 | 58.5 | 93.1 | 79.1 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

सावन का महीना था। आसमान में बहुत काले-काले बादल छाए थे। ठंडी-ठंडी हवा चल रही थी। मुझे झूला झूलने का मन किया। बड़े भैया एक मोटी सी रस्सी लेकर बाहर आए। भैया ने रस्सी को पेड़ से लटकाकर झूला बनाया। सब ने मिलकर खूब झूला झूला। बाकी बच्चे भी आकर मज़े से झूलने लगे। झूलते-झूलते रात हो गई।

नीतू के घर में गाय है। उसका रंग सफेद है। गाय हरी घास खाती है। वह बहुत दूध देती है।

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 67.0 | 85.2 | 74.0 | 60.7 | 78.3 | 67.6 |
| 2011 | 63.2 | 90.1 | 73.6 | 55.9 | 81.2 | 66.0 |
| 2012 | 51.0 | 88.4 | 69.0 | 43.5 | 79.2 | 59.7 |
| 2013 | 55.5 | 90.2 | 74.0 | 48.1 | 81.0 | 63.0 |
| 2014 | 59.9 | 91.6 | 76.4 | 53.9 | 81.3 | 68.2 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std ॥ level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even |  |  |  |  |  |
| :--- | ---: | ---: | :---: | :---: | :---: | :---: |
|  | Recognize numbers | Can <br> subtract | Can <br> divide | Total |  |  |
| I | 22.2 | 26.7 | $10-99$ | 36.0 | 13.6 | 1.5 |
| II | 8.4 | 24.3 | 31.1 | 28.1 | 8.1 | 100 |
| III | 5.0 | 18.1 | 22.9 | 28.7 | 25.4 | 100 |
| IV | 2.5 | 12.6 | 16.9 | 27.6 | 40.4 | 100 |
| V | 2.3 | 7.7 | 15.3 | 22.9 | 51.8 | 100 |
| VI | 1.6 | 6.0 | 14.5 | 21.0 | 56.9 | 100 |
| VII | 1.8 | 4.2 | 12.6 | 20.8 | 60.6 | 100 |
| VIII | 0.8 | 2.8 | 12.5 | 17.3 | 66.7 | 100 |
| Total | 5.7 | 12.9 | 20.3 | 22.5 | 38.5 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 5\% children cannot even recognize numbers 1-9, 18.1\% can recognize numbers up to 9 but not more, $22.9 \%$ can recognize numbers up to 99 but cannot do subtraction, $28.7 \%$ can do subtraction but cannot do division, and $25.4 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 91.8 | 97.6 | 94.6 | 76.5 | 90.9 | 82.3 |
| 2011 | 87.3 | 96.8 | 92.0 | 65.8 | 92.8 | 77.6 |
| 2012 | 84.1 | 98.2 | 92.2 | 50.7 | 91.8 | 71.7 |
| 2013 | 81.8 | 98.4 | 91.4 | 52.2 | 93.6 | 75.8 |
| 2014 | 82.8 | 97.5 | 91.7 | 50.7 | 94.9 | 76.9 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  |  | \% Children in Std V who can <br> do division |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 62.1 | 85.3 | 71.0 | 50.5 | 70.8 | 58.4 |
| 2011 | 55.4 | 81.3 | 65.5 | 40.3 | 65.0 | 50.2 |
| 2012 | 42.1 | 81.5 | 60.9 | 25.4 | 63.7 | 42.9 |
| 2013 | 41.3 | 84.8 | 64.5 | 31.7 | 69.5 | 48.9 |
| 2014 | 45.5 | 88.7 | 68.1 | 30.8 | 71.0 | 51.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

| I | 62.9 | 43.7 |
| II | 61.4 | 44.2 |
| III | 61.8 | 53.3 |
| IV | 65.8 | 59.8 |
| V | 63.8 | 67.5 |
| VI | 59.5 | 72.6 |
| VIII | 61.3 | 74.6 |
| VIII | 58.6 | 76.1 |
| Total | 62.1 | 67.0 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |

## RTE indicators

The Right of Children to Free and Compulsory Education (RTE) Act, 2009 specifies a series of norms and standards for a school. Data on selected measurable indicators of RTE are collected in ASER.

Table 17: Schools meeting selected RTE norms 2010-2014

| \% Schools meeting the following RTE norms: |  | 2010 | 2011 | 2012 | 2013 | 2014 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| TLM grant | 470 | 58.9 | 37.9 | 3.2 | 529 | 8.5 | 88.3 | 3.2 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 15.2 | 84.3 | 0.5 |
|  | White wash/plastering | 36.4 | 62.7 | 1.0 |
|  | Repair of drinking water facility | 45.8 | 53.7 | 0.5 |
|  | Repair of toilet | 35.0 | 64.3 | 0.7 |
| Purchase | Mats, Tat patti etc. | 34.8 | 63.8 | 1.5 |
|  | Charts, globes or other teaching <br> material | 46.0 | 52.6 | 1.4 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
98.9

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 1.1 |
| ---: | :---: |
| Jan to June 2014 | 2.9 |
| July to Sept 2014 | 72.6 |
| After Sept 2014 | 23.4 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 97.0 |
| Average number of members present in last meeting | 11 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

Note: For 3 and 4 year old children, only pre-school status is recorded.
ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $2.7 \%$ in 2006, $1.1 \%$ in 2009, 1\% in 2011 and $0.5 \%$ in 2014.

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $53 \%$ children are 8 years old but there are also $28.8 \%$ who are $7,14.8 \%$ who are 9 and $2.4 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | :---: | :---: | :---: | :---: |
| I | 20.8 | 45.3 | 18.5 | 8.8 | 6.7 | 100 |
| II | 7.4 | 23.3 | 23.2 | 21.8 | 24.3 | 100 |
| III | 3.2 | 11.4 | 15.1 | 23.8 | 46.5 | 100 |
| IV | 1.9 | 7.4 | 11.1 | 18.9 | 60.7 | 100 |
| V | 2.3 | 4.1 | 5.0 | 13.5 | 75.2 | 100 |
| VI | 0.7 | 3.2 | 4.8 | 10.8 | 80.6 | 100 |
| VII | 0.4 | 3.5 | 1.9 | 8.1 | 86.1 | 100 |
| VIII | 0.5 | 0.8 | 1.1 | 5.6 | 91.9 | 100 |
| Total | 4.5 | 12.0 | 9.9 | 13.8 | 59.8 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 3.2\% children cannot even read letters, 11.4\% can read letters but not more, $15.1 \%$ can read words but not Std I level text or higher, 23.8\% can read Std I level text but not Std II level text, and 46.5\% can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt.* |
| 2010 | 97.5 | 97.3 | 97.5 | 87.8 | 96.4 | 90.4 |
| 2011 | 95.9 | 97.2 | 96.4 | 85.9 | 97.0 | 89.4 |
| 2012 | 89.4 | 99.3 | 92.7 | 78.7 | 91.0 | 82.7 |
| 2013 | 91.1 | 99.4 | 95.0 | 78.8 | 91.5 | 83.8 |
| 2014 | 87.8 | 98.6 | 92.6 | 82.8 | 89.8 | 85.5 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

## नगमा समझदार लड़की थी।

 मगर उसका छोटा भाई अमन बहुत नटखट था। एक दिन दोनों बाज़ार में घूम रहे थे। अमन ने रास्ते में पकौड़े देखे। उसे पकौड़े बहुत पसंद थे। माँ उसके लिए पकौड़े बनाती थी। नगमा ने कहा यह पकौड़े तीखे होंगे। मगर अमन नहीं माना। अमन ने पकौड़े खाए और उसकी आँखों से आँसू निकलने लगे।

काले बादल छाए हैं। तेज़ बारिश हो रही है। मोर भी नाच रहा है। सब नाच देख रहे हैं।

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 84.5 | 88.2 | 85.5 | 75.7 | 82.8 | 77.4 |
| 2011 | 83.5 | 93.6 | 86.2 | 70.4 | 83.5 | 73.9 |
| 2012 | 77.0 | 90.7 | 80.9 | 71.2 | 76.9 | 72.8 |
| 2013 | 76.5 | 93.3 | 81.8 | 65.1 | 74.8 | 68.4 |
| 2014 | 73.5 | 89.3 | 79.6 | 71.5 | 82.5 | 75.3 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std ॥ level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even <br> $1-9$ | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| । | 15.3 | 35.9 | 44.0 | 4.1 | 0.7 | 100 |
| ॥ | 3.5 | 22.9 | 43.5 | 27.3 | 2.8 | 100 |
| III | 1.7 | 11.4 | 34.7 | 35.7 | 16.6 | 100 |
| IV | 1.0 | 7.3 | 30.8 | 27.7 | 33.3 | 100 |
| V | 0.7 | 4.1 | 19.0 | 29.3 | 46.8 | 100 |
| VI | 0.0 | 3.1 | 19.5 | 26.1 | 51.4 | 100 |
| VII | 0.8 | 2.5 | 17.6 | 23.6 | 55.5 | 100 |
| VIII | 0.0 | 1.7 | 15.0 | 21.5 | 61.8 | 100 |
| Total | 2.8 | 10.8 | 27.7 | 24.5 | 34.3 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $1.7 \%$ children cannot even recognize numbers 1-9, $11.4 \%$ can recognize numbers up to 9 but not more, $34.7 \%$ can recognize numbers up to 99 but cannot do subtraction, $35.7 \%$ can do subtraction but cannot do division, and $16.6 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | ---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 97.8 | 96.0 | 97.2 | 88.9 | 97.5 | 91.5 |
| 2011 | 97.7 | 99.7 | 98.4 | 85.0 | 98.5 | 89.2 |
| 2012 | 95.4 | 100.0 | 97.0 | 79.2 | 95.4 | 84.5 |
| 2013 | 96.5 | 99.1 | 97.7 | 78.7 | 96.6 | 85.7 |
| 2014 | 94.5 | 99.0 | 96.5 | 82.0 | 95.0 | 87.1 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std $V$ who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 79.7 | 84.4 | 81.0 | 61.8 | 67.7 | 63.2 |
| 2011 | 75.6 | 91.2 | 79.8 | 55.5 | 71.9 | 59.8 |
| 2012 | 60.5 | 84.5 | 67.4 | 40.7 | 70.3 | 48.7 |
| 2013 | 62.3 | 85.5 | 69.6 | 40.2 | 61.1 | 47.3 |
| 2014 | 52.8 | 74.0 | 61.0 | 37.9 | 63.9 | 46.9 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Himachal Pradesh rural

Data has not been presented where sample size was insufficient.
Facilitated by PRATHAM

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 21.7 | 24.9 | 31.4 | 16.3 | 5.7 | 100 |
| II | 8.2 | 14.0 | 30.5 | 30.4 | 17.0 | 100 |
| III | 3.2 | 9.3 | 26.2 | 33.1 | 28.2 | 100 |
| IV | 2.8 | 6.4 | 20.7 | 29.9 | 40.2 | 100 |
| V | 1.8 | 3.8 | 13.8 | 27.2 | 53.4 | 100 |
| VI | 0.7 | 3.6 | 11.4 | 24.8 | 59.6 | 100 |
| VIII | 1.1 | 1.5 | 8.5 | 20.3 | 68.6 | 100 |
| VIII | 0.5 | 1.2 | 6.8 | 14.3 | 77.1 | 100 |
| Total | 4.8 | 7.9 | 18.4 | 24.6 | 44.3 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 3.2\% children cannot even read capital letters, 9.3\% can read capital letters but not more, $26.2 \%$ can read small letters but not words or higher, $33.1 \%$ can read words but not sentences, and $28.2 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Himachal Pradesh rubal

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 12 OUT OF 12 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Primary schools <br> (Std I-IVN) | 195 | 224 | 222 | 249 | 250 |
| Upper primary schools <br> (Std I-VIIINIII) | 66 | 50 | 17 | 32 | 27 |
| Total schools visited | 261 | 274 | 239 | 281 | 277 |

| TLM grant | 229 | 61.6 | 35.4 | 3.1 | 253 | 2.0 | 93.7 | 4.4 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | $\%$ Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 6.0 | 92.9 | 1.1 |
|  | White wash/plastering | 52.8 | 46.4 | 0.8 |
|  | Repair of drinking water facility | 37.8 | 60.7 | 1.5 |
|  | Repair of toilet | 34.5 | 64.0 | 1.5 |
| Purchase | Mats, Tat patti etc. | 26.8 | 71.3 | 1.9 |
|  | Charts, globes or other teaching <br> material | 44.0 | 54.5 | 1.5 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
99.6

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 0.4 |
| ---: | :---: |
| Jan to June 2014 | 7.8 |
| July to Sept 2014 | 83.3 |
| After Sept 2014 | 8.6 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 97.4 |
| Average number of members present in last meeting | 10 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 99.6 | 98.9 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 86.0 | 80.7 |
| :--- | :---: | :---: |
| For some teachers | 3.7 | 5.2 |
| For no teachers | 7.7 | 10.0 |

| Age: 15-16 BOYS | 60.2 | 28.1 | 0.5 | 11.2 | 100 |
| Age: $15-16$ GIRLS | 63.0 | 24.4 | 1.0 | 11.7 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Govt. | Pvt. | Other |  |  |  |  |  |
| Age 3 |  | 17.6 |  |  | 41.9 | 100 |  |  |  |
| Age 4 | 31.2 | 41.6 |  |  | 27.2 | 100 |  |  |  |
| Age 5 | 8.4 | 31.0 | 21.2 | 29.4 | 0.2 | 9.8 | 100 |  |  |
| Age 6 | 2.6 | 25.6 | 30.2 | 38.3 | 0.3 | 3.0 | 100 |  |  |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 8.3 \% in 2006, 3.1\% in 2009, 3.7\% in 2011 and $4.2 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| I | 20.6 | 29.7 | 29.0 | 13.0 |  |  |  |  | 7 |  |  |  | 100 |
| \|| | 2.2 | 10.8 | 26.6 | 35.6 | 14.2 | 6.6 |  |  |  | 4.1 |  |  | 100 |
| III | 0.5 | 2.5 | 11.7 | 26.7 | 33.4 | 16.8 |  |  |  | 8.3 |  |  | 100 |
| IV |  | 3.5 |  | 9.9 | 22.9 | 41.1 | 12.7 | 7.0 |  |  | . 9 |  | 100 |
| V |  |  | 4.3 |  | 8.4 | 31.0 | 31.6 | 16.4 | 5.1 |  | 3.2 |  | 100 |
| VI |  |  | 3.4 |  |  | 12.5 | 19.4 | 45.1 | 13.7 |  | 5.9 |  | 100 |
| VII | 4.7 |  |  |  |  |  | 9.8 | 29.0 | 38.6 | 13.4 | 4.5 |  | 100 |
| VIII | 3.6 |  |  |  |  |  |  | 10.7 | 23.8 | 47.4 | 8.9 | 5.7 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $26.7 \%$ children are 8 years old but there are also $11.7 \%$ who are $7,33.4 \%$ who are $9,16.8 \%$ who are 10 and $8.3 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 20.3 | 39.7 | 27.5 | 9.7 | 2.9 | 100 |
| II | 9.6 | 28.0 | 29.7 | 19.5 | 13.3 | 100 |
| III | 5.8 | 19.0 | 31.1 | 24.3 | 19.9 | 100 |
| IV | 2.2 | 13.9 | 26.4 | 26.5 | 31.0 | 100 |
| V | 1.5 | 9.1 | 19.2 | 31.6 | 38.7 | 100 |
| VI | 1.4 | 3.7 | 15.1 | 27.1 | 52.7 | 100 |
| VII | 0.6 | 5.1 | 11.4 | 25.7 | 57.2 | 100 |
| VIII | 1.1 | 4.1 | 7.9 | 23.2 | 63.7 | 100 |
| Total | 5.5 | 15.9 | 21.5 | 23.3 | 33.9 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 5.8\% children cannot even read letters, 19\% can read letters but not more, $31.1 \%$ can read words but not Std I level text or higher, $24.3 \%$ can read Std I level text but not Std II level text, and 19.9\% can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2011-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 |  |  |  |  |  |  |
| 2011 | 91.0 | 98.5 | 94.1 | 64.6 | 87.3 | 73.6 |
| 2012 | 91.8 | 98.9 | 95.3 | 57.9 | 92.2 | 73.8 |
| 2013 | 89.1 | 99.0 | 93.6 | 66.0 | 95.1 | 79.5 |
| 2014 | 84.5 | 96.0 | 90.3 | 59.5 | 90.8 | 75.2 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2012 and 2014

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2011-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  |  |  |  |  |  |  |
| 2011 | 41.8 | 78.5 | 56.4 | 23.0 | 56.3 | 36.2 |
| 2012 | 41.0 | 81.4 | 59.7 | 24.6 | 64.1 | 41.2 |
| 2013 | 43.9 | 85.4 | 63.5 | 27.9 | 65.6 | 45.1 |
| 2014 | 41.9 | 74.3 | 57.8 | 21.0 | 58.8 | 38.7 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | $\begin{array}{\|c\|} \hline \text { Not even } \\ 1-9 \end{array}$ | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 18.7 | 31.0 | 40.8 | 9.1 | 0.4 | 100 |
| ॥ | 7.3 | 18.1 | 46.8 | 23.8 | 4.0 | 100 |
| III | 3.8 | 13.7 | 41.6 | 30.8 | 10.2 | 100 |
| IV | 2.5 | 7.5 | 37.5 | 32.2 | 20.4 | 100 |
| V | 1.5 | 5.6 | 30.0 | 37.9 | 24.9 | 100 |
| VI | 1.2 | 2.5 | 26.4 | 39.7 | 30.3 | 100 |
| VII | 0.4 | 1.8 | 28.1 | 37.4 | 32.3 | 100 |
| VIII | 0.4 | 2.1 | 23.6 | 34.8 | 39.2 | 100 |
| Total | 4.6 | 10.7 | 34.7 | 30.4 | 19.6 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 3.8\% children cannot even recognize numbers 1-9, $13.7 \%$ can recognize numbers up to 9 but not more, $41.6 \%$ can recognize numbers up to 99 but cannot do subtraction, $30.8 \%$ can do subtraction but cannot do division, and $10.2 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2011-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 |  |  |  |  |  |  |
| 2011 | 93.6 | 97.7 | 95.3 | 71.9 | 91.0 | 79.6 |
| 2012 | 94.4 | 98.5 | 96.4 | 73.9 | 95.7 | 83.9 |
| 2013 | 92.5 | 98.9 | 95.4 | 79.9 | 95.3 | 87.1 |
| 2014 | 88.2 | 97.0 | 92.7 | 71.7 | 93.3 | 82.6 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2011-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std V who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt. * |
| 2010 |  |  |  |  |  |  |
| 2011 | 34.2 | 75.2 | 50.6 | 11.6 | 39.2 | 22.5 |
| 2012 | 31.5 | 72.5 | 50.3 | 7.8 | 39.3 | 21.2 |
| 2013 | 36.1 | 75.6 | 54.8 | 13.5 | 43.0 | 27.0 |
| 2014 | 37.1 | 69.1 | 52.9 | 13.7 | 38.0 | 25.0 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Jammu and Kashmir rubal

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 21.3 | 19.2 | 23.6 | 26.4 | 9.6 | 100 |
| II | 9.4 | 10.2 | 21.2 | 36.1 | 23.1 | 100 |
| III | 6.1 | 7.4 | 16.9 | 38.1 | 31.5 | 100 |
| IV | 2.3 | 5.6 | 12.2 | 34.5 | 45.6 | 100 |
| V | 1.7 | 3.1 | 9.2 | 33.7 | 52.2 | 100 |
| VI | 1.1 | 2.0 | 4.3 | 24.9 | 67.8 | 100 |
| VII | 0.4 | 2.4 | 3.6 | 22.6 | 71.0 | 100 |
| VIII | 0.9 | 1.2 | 3.8 | 18.6 | 75.5 | 100 |
| Total | 5.6 | 6.6 | 12.2 | 29.7 | 45.9 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, $6.1 \%$ children cannot even read capital letters, 7.4\% can read capital letters but not more, $16.9 \%$ can read small letters but not words or higher, $38.1 \%$ can read words but not sentences, and $31.5 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 49.1 |  |
| II | 59.1 | 60.4 |
| III | 58.1 | 58.9 |
| IV | 55.4 | 61.6 |
| V | 60.1 | 66.1 |
| VI | 67.4 | 65.6 |
| VIII | 64.8 | 72.9 |
| VIII | 74.3 | 63.9 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |

| Maintenance grant | 381 | 87.4 | 10.0 | 2.6 | 331 | 61.0 | 35.1 | 3.9 |
| Development grant | 381 | 77.4 | 19.2 | 3.4 | 326 | 43.3 | 50.9 | 5.8 |
| TLM grant | 379 | 91.3 | 6.3 | 2.4 | 331 | 40.2 | 55.9 | 3.9 |

## Table 19: \% Schools that report receiving SSA grants - Half financial year

| SSA school grants | April 2012 to date of survey (2012) |  |  |  | April 2014 to date of survey (2014) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { Number } \\ \text { of } \\ \text { schools } \end{gathered}$ | \% Schools |  |  | $\begin{aligned} & \text { Number } \\ & \text { of } \\ & \text { schools } \end{aligned}$ | \% Schools |  |  |
|  |  | Yes | No | $\begin{aligned} & \hline \text { Don't } \\ & \text { know } \end{aligned}$ |  | Yes | No | $\begin{aligned} & \text { Don't } \\ & \text { know } \end{aligned}$ |
| Maintenance grant | 369 | 61.8 | 34.4 | 3.8 | 311 | 51.1 | 42.4 | 6.4 |
| Development grant | 367 | 57.2 | 38.4 | 4.4 | 307 | 39.7 | 53.8 | 6.5 |
| TLM grant | 367 | 64.6 | 31.9 | 3.5 | 306 | 27.1 | 69.0 | 3.9 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 20.5 | 78.9 | 0.6 |
|  | White wash/plastering | 36.2 | 63.2 | 0.6 |
|  | Repair of drinking water facility | 28.7 | 70.5 | 0.9 |
|  | Repair of toilet | 24.3 | 74.8 | 0.9 |
| Purchase | Mats, Tat patti etc. | 53.0 | 45.9 | 1.2 |
|  | Charts, globes or other teaching <br> material | 67.3 | 31.9 | 0.9 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
84.4

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 1.5 |
| ---: | :---: |
| Jan to June 2014 | 18.1 |
| July to Sept 2014 | 41.1 |
| \% Schools that could give information Sept 2014 <br> members were present in the last meeting | 39.3 |
| Average number of members present in last meeting many | 89.2 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 59.4 | 73.1 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 51.2 | 57.5 |
| :--- | :---: | :---: |
| For some teachers | 16.1 | 20.8 |
| For no teachers | 23.2 | 12.5 |
| Don't know | 9.5 | 9.2 |
| Of the schools which have <br> received manual, \% schools <br> which could show it | 65.7 | 69.6 |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $13.7 \%$ in 2006, $7.5 \%$ in 2009, $6.4 \%$ in 2011 and $13 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 26.0 | 37.9 | 17.8 | 11.3 | 7.0 |  |  |  |  |  |  |  | 100 |
| \|| | 5.4 | 16.5 | 32.3 | 26.7 | 7.0 | 7.7 | 4.6 |  |  |  |  |  | 100 |
| III |  | 5 | 12.5 | 34.4 | 19.5 | 17.0 | 10.1 |  |  |  |  |  | 100 |
| IV | 6.2 |  |  | 17.1 | 23.2 | 30.8 | 7.3 | 10.5 | 5.0 |  |  |  | 100 |
| V | 2.4 |  |  | 7.5 | 9.0 | 37.5 | 16.7 | 17.3 | 5.6 | 4.0 |  |  | 100 |
| VI | 7.1 |  |  |  |  | 18.0 | 20.6 | 34.5 | 11.4 | 5.8 | 2.6 |  | 100 |
| VII | 2.7 |  |  |  |  | 6.3 | 8.5 | 36.1 | 24.0 | 15.5 | 5.0 | 1.9 | 100 |
| VIII | 7.0 |  |  |  |  |  |  | 18.5 | 29.5 | 29.3 | 10.8 | 5.0 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $34.4 \%$ children are 8 years old but there are also $12.5 \%$ who are $7,19.5 \%$ who are $9,17 \%$ who are 10 and $10.1 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 55.7 | 27.3 | 10.1 | 4.7 | 2.2 | 100 |
| II | 26.1 | 35.2 | 23.0 | 9.9 | 5.9 | 100 |
| III | 13.9 | 30.1 | 26.4 | 15.5 | 14.1 | 100 |
| IV | 9.0 | 19.6 | 25.9 | 23.3 | 22.3 | 100 |
| V | 4.7 | 14.0 | 20.4 | 26.5 | 34.4 | 100 |
| VI | 2.4 | 8.7 | 17.6 | 25.5 | 45.8 | 100 |
| VII | 2.1 | 5.9 | 9.9 | 22.0 | 60.1 | 100 |
| VIII | 1.0 | 3.6 | 8.4 | 16.7 | 70.4 | 100 |
| Total | 16.9 | 19.3 | 17.8 | 17.2 | 28.9 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 13.9\% children cannot even read letters, $30.1 \%$ can read letters but not more, $26.4 \%$ can read words but not Std I level text or higher, $15.5 \%$ can read Std I level text but not Std II level text, and $14.1 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 83.8 | 94.6 | 84.8 | 71.3 | 82.2 | 72.1 |
| 2011 | 75.4 | 94.0 | 78.0 | 57.1 | 82.9 | 60.4 |
| 2012 | 77.7 | 96.6 | 80.9 | 53.2 | 81.8 | 57.3 |
| 2013 | 68.4 | 90.8 | 72.2 | 51.9 | 83.6 | 56.4 |
| 2014 | 70.4 | 88.3 | 74.2 | 49.4 | 86.3 | 56.2 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

> चलनी
> रामपुर में एक मैदान था। वहाँ कुछ
> नहीं उगता था। वहाँ कोई खेलने नहीं जाता था। एक दिन कुछ लोग आए। उन्होंने गाँव के लोगों को बुलाया। सबने मिलकर तय किया कि यहाँ बग़ीचा बनाया जाए। खाद मंगाकर हर तरह के पौधे लगाए गए। सही समय पर पानी दिया गया। आज वहाँ एक सुंदर बग़ीचा है। इसलिए वहाँ सभी खेलने जाते हैं।

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 61.7 | 79.4 | 62.8 | 48.4 | 65.4 | 49.6 |
| 2011 | 46.0 | 75.2 | 49.2 | 37.5 | 68.2 | 41.0 |
| 2012 | 42.5 | 58.3 | 45.2 | 32.5 | 75.4 | 37.7 |
| 2013 | 42.1 | 78.1 | 47.3 | 29.4 | 67.9 | 33.9 |
| 2014 | 40.1 | 70.5 | 45.6 | 29.1 | 64.0 | 34.4 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std ॥ level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even |  |  |  |  |  |
| :--- | ---: | ---: | :---: | :---: | :---: | :---: |
|  | Recognize numbers | Can <br> subtract | Can <br> divide | Total |  |  |
| I | 53.7 | 28.4 | $10-99$ | 14.0 | 3.2 | 0.7 |
| II | 23.0 | 41.6 | 26.6 | 6.5 | 2.3 | 100 |
| III | 10.7 | 35.7 | 34.3 | 12.9 | 6.5 | 100 |
| IV | 7.0 | 23.5 | 36.6 | 19.8 | 13.1 | 100 |
| V | 3.4 | 17.0 | 35.6 | 22.7 | 21.3 | 100 |
| VI | 1.7 | 9.9 | 29.8 | 30.7 | 27.9 | 100 |
| VII | 1.2 | 6.2 | 23.2 | 30.3 | 39.1 | 100 |
| VIII | 0.6 | 2.7 | 20.2 | 25.5 | 51.0 | 100 |
| Total | 15.1 | 22.0 | 27.1 | 17.6 | 18.1 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $10.7 \%$ children cannot even recognize numbers 1-9, $35.7 \%$ can recognize numbers up to 9 but not more, $34.3 \%$ can recognize numbers up to 99 but cannot do subtraction, $12.9 \%$ can do subtraction but cannot do division, and $6.5 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 84.6 | 94.2 | 85.5 | 69.1 | 78.9 | 69.9 |
| 2011 | 77.3 | 92.4 | 79.4 | 52.9 | 75.1 | 55.7 |
| 2012 | 81.4 | 96.3 | 83.9 | 53.3 | 87.4 | 58.0 |
| 2013 | 74.3 | 92.4 | 77.4 | 50.3 | 84.5 | 55.2 |
| 2014 | 73.1 | 91.7 | 77.1 | 46.3 | 86.6 | 53.8 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std V who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt. * |
| 2010 | 56.9 | 67.8 | 57.6 | 40.1 | 50.7 | 40.8 |
| 2011 | 39.1 | 68.8 | 42.3 | 20.9 | 47.2 | 24.0 |
| 2012 | 33.5 | 53.3 | 36.9 | 20.1 | 54.6 | 24.3 |
| 2013 | 30.5 | 68.5 | 36.1 | 17.9 | 51.8 | 21.9 |
| 2014 | 27.9 | 55.2 | 32.8 | 17.6 | 42.7 | 21.4 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 23.8 | 74.9 | 1.3 |
|  | White wash/plastering | 72.7 | 26.1 | 1.2 |
|  | Repair of drinking water facility | 59.1 | 39.9 | 1.0 |
|  | Repair of toilet | 38.6 | 60.4 | 1.0 |
| Purchase | Mats, Tat patti etc. | 52.4 | 45.8 | 1.7 |
|  | Charts, globes or other teaching <br> material | 67.0 | 31.5 | 1.5 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
94.7

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 2.0 |
| ---: | :---: |
| Jan to June 2014 | 7.3 |
| July to Sept 2014 | 90.3 |
| After Sept 2014 | 0.4 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 91.5 |
| Average number of members present in last meeting | 18 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $8 \%$ in 2006, 6.1 \% in 2009, 5.1\% in 2011 and $3.5 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| I | 5.8 | 61.4 | 28.6 | 4.2 |  |  |  |  |  |  |  |  | 100 |
| \\| | 4 | 1 | 41.9 | 50.3 | 3.8 |  |  |  |  |  |  |  | 100 |
| III |  | 4 | 5.2 | 32.9 | 56.6 | 4.9 |  |  |  |  |  |  | 100 |
| IV | 0.6 |  |  | 6.4 | 30.9 | 56.5 | 5.7 |  |  |  |  |  | 100 |
| V | 5.7 |  |  |  |  | 35.4 | 53.0 | 5.9 |  |  |  |  | 100 |
| VI | 1.0 |  |  |  |  | 6.4 | 30.0 | 57.6 | 5.0 |  |  |  | 100 |
| VII | 2.2 |  |  |  |  |  | 6.9 | 33.1 | 50.0 | 7.0 | 0 | 8 | 100 |
| VIII | 1.6 |  |  |  |  |  |  | 7.7 | 37.6 | 49.0 | 4 | 0 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $32.9 \%$ children are 8 years old but there are also $5.2 \%$ who are $7,56.6 \%$ who are 9 and $4.9 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 46.2 | 36.1 | 12.0 | 4.5 | 1.3 | 100 |
| II | 23.0 | 27.8 | 28.7 | 14.6 | 5.9 | 100 |
| III | 12.1 | 19.3 | 25.9 | 24.5 | 18.3 | 100 |
| IV | 7.1 | 15.2 | 20.7 | 24.2 | 32.8 | 100 |
| V | 4.3 | 8.9 | 15.1 | 24.5 | 47.2 | 100 |
| VI | 4.0 | 6.0 | 11.0 | 24.3 | 54.8 | 100 |
| VII | 3.4 | 4.1 | 9.6 | 18.7 | 64.2 | 100 |
| VIII | 2.7 | 3.7 | 6.5 | 16.6 | 70.6 | 100 |
| Total | 13.4 | 15.6 | 16.4 | 18.9 | 35.7 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $12.1 \%$ children cannot even read letters, $19.3 \%$ can read letters but not more, $25.9 \%$ can read words but not Std I level text or higher, $24.5 \%$ can read Std I level text but not Std II level text, and $18.3 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |

| 2012 | 59.8 | 71.7 | 62.3 | 47.2 | 54.6 | 48.5 |
| 2013 | 60.0 | 62.8 | 60.6 | 41.3 | 45.8 | 42.2 |
| 2014 | 55.3 | 63.0 | 57.2 | 45.7 | 53.5 | 47.3 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.
acilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 36.3 | 35.4 | 25.9 | 1.7 | 0.7 | 100 |
| ॥ | 16.1 | 23.5 | 49.9 | 9.7 | 0.8 | 100 |
| III | 7.5 | 13.4 | 52.8 | 24.0 | 2.4 | 100 |
| IV | 3.5 | 10.9 | 45.6 | 28.2 | 11.8 | 100 |
| V | 2.8 | 6.3 | 37.2 | 33.6 | 20.1 | 100 |
| VI | 2.0 | 3.5 | 34.3 | 35.4 | 24.8 | 100 |
| VII | 1.9 | 2.9 | 33.4 | 32.8 | 29.0 | 100 |
| VIII | 1.1 | 2.3 | 31.2 | 28.4 | 37.0 | 100 |
| Total | 9.4 | 12.7 | 38.9 | 23.9 | 15.2 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $7.5 \%$ children cannot even recognize numbers 1-9, $13.4 \%$ can recognize numbers up to 9 but not more, $52.8 \%$ can recognize numbers up to 99 but cannot do subtraction, $24 \%$ can do subtraction but cannot do division, and $2.4 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| 2014 | 35.7 | 53.3 | 40.1 | 16.7 | 33.2 | 20.2 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## RTE indicators

The Right of Children to Free and Compulsory Education (RTE) Act, 2009 specifies a series of norms and standards for a school. Data on selected measurable indicators of RTE are collected in ASER.

Table 17: Schools meeting selected RTE norms 2010-2014

| \% Schools meeting the following RTE norms: |  | 2010 | 2011 | 2012 | 2013 | 2014 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { PTR \& } \\ & \text { CTR } \end{aligned}$ | Pupil-teacher ratio (PTR) | 69.4 | 71.2 | 66.9 | 66.9 | 70.4 |
|  | Classroom-teacher ratio (CTR) | 82.8 | 85.0 | 83.2 | 85.3 | 84.1 |
| Building | Office/store/office cum store | 72.1 | 74.0 | 76.2 | 81.1 | 78.7 |

| Age: 15-16 GIRLS | 44.7 | 54.8 | 0.2 | 0.4 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi or anganwadi | $\begin{gathered} \text { In LKG/ } \\ \text { UKG } \end{gathered}$ | In school |  |  | Not in school or preschool | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Govt. | Pvt. | Other |  |  |
| Age 3 | 54.1 | 7.3 |  |  |  | 38.6 | 100 |
| Age 4 | 27.5 | 62.0 |  |  |  | 10.5 | 100 |
| Age 5 | 6.1 | 11.2 | 11.6 | 69.4 | 0.3 | 1.5 | 100 |
| Age 6 | 1.0 | 3.3 | 24.5 | 70.5 | 0.0 | 0.8 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time \% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $0.6 \%$ in 2006, $0.2 \%$ in 2009, $0.1 \%$ in 2011 and $0.2 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 1516 | Total |
| I | 16.0 | 59.2 | 21.4 | 3.4 |  |  |  |  |  |  |  | 100 |
| \|| | 0.2 | 10.9 | 61.3 | 25.9 | 1.7 |  |  |  |  |  |  | 100 |
| III | 0. | 3 | 12.3 | 61.1 | 23.2 | 3.1 |  |  |  |  |  | 100 |
| IV | 0.8 |  |  | 14.7 | 59.0 | 22.0 | 3.6 |  |  |  |  | 100 |
| V | 0.2 |  |  |  | 9.0 | 67.2 | 20.4 | 3.2 |  |  |  | 100 |
| VI | 0.9 |  |  |  |  | 12.8 | 61.1 | 23.7 | 1.5 |  |  | 100 |
| VII | 1.1 |  |  |  |  |  | 12.4 | 58.9 | 24.6 | 3.0 |  | 100 |
| VIII | 1.1 |  |  |  |  |  |  | 12.9 | 68.2 | 16.8 | 1.0 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $61.1 \%$ children are 8 years old but there are also $12.3 \%$ who are $7,23.2 \%$ who are 9 , and $3.1 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^44]Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 11.5 | 35.1 | 38.9 | 8.5 | 5.9 | 100 |
| II | 5.1 | 9.1 | 38.8 | 23.6 | 23.4 | 100 |
| III | 4.5 | 7.4 | 23.0 | 26.0 | 39.1 | 100 |
| IV | 2.7 | 5.1 | 18.0 | 21.9 | 52.3 | 100 |
| V | 1.4 | 3.6 | 9.1 | 19.1 | 66.8 | 100 |
| VI | 0.5 | 1.8 | 5.4 | 18.0 | 74.3 | 100 |
| VII | 0.0 | 0.8 | 4.7 | 11.7 | 82.7 | 100 |
| VIII | 0.6 | 0.7 | 2.6 | 7.6 | 88.6 | 100 |
| Total | 3.3 | 7.8 | 17.4 | 17.0 | 54.6 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $4.5 \%$ children cannot even read letters, $7.4 \%$ can read letters but not more, $23 \%$ can read words but not Std I level text or higher, $26 \%$ can read Std I level text but not Std II level text, and 39.1\% can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 97.5 | 99.6 | 98.8 | 89.0 | 94.5 | 92.2 |
| 2011 | 98.8 | 97.4 | 97.9 | 88.3 | 92.0 | 90.6 |
| 2012 | 96.9 | 97.8 | 97.5 | 89.1 | 91.9 | 90.8 |
| 2013 | 97.3 | 99.2 | 98.7 | 84.8 | 91.9 | 89.9 |
| 2014 | 95.2 | 94.8 | 94.9 | 82.6 | 91.0 | 88.0 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 86.8 | 88.8 | 87.9 | 74.0 | 77.9 | 76.1 |
| 2011 | 83.7 | 84.9 | 84.4 | 72.6 | 74.9 | 73.9 |
| 2012 | 74.1 | 83.8 | 79.8 | 59.9 | 69.0 | 65.2 |
| 2013 | 75.6 | 80.1 | 78.8 | 79.4 | 74.1 | 75.9 |
| 2014 | 69.8 | 76.7 | 74.1 | 61.3 | 70.7 | 66.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 10.1 | 24.7 | 61.3 | 3.0 | 0.9 | 100 |
| II | 5.6 | 5.3 | 66.7 | 21.2 | 1.2 | 100 |
| III | 3.0 | 5.3 | 45.9 | 36.8 | 9.0 | 100 |
| IV | 1.6 | 1.9 | 40.0 | 35.7 | 20.8 | 100 |
| V | 0.8 | 1.3 | 26.6 | 32.3 | 39.1 | 100 |
| VI | 0.4 | 2.6 | 23.6 | 30.6 | 42.9 | 100 |
| VII | 0.1 | 0.5 | 18.5 | 28.3 | 52.7 | 100 |
| VIII | 0.6 | 0.3 | 15.8 | 23.9 | 59.5 | 100 |
| Total | 2.7 | 5.1 | 37.0 | 26.4 | 28.7 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 3\% children cannot even recognize numbers 1-9, 5.3\% can recognize numbers up to 9 but not more, $45.9 \%$ can recognize numbers up to 99 but cannot do subtraction, $36.8 \%$ can do subtraction but cannot do division, and $9 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 97.7 | 98.9 | 98.4 | 96.3 | 97.5 | 97.0 |
| 2011 | 98.8 | 98.1 | 98.3 | 90.4 | 93.6 | 92.4 |
| 2012 | 98.1 | 98.0 | 98.0 | 89.4 | 93.1 | 91.7 |
| 2013 | 98.7 | 99.6 | 99.4 | 91.7 | 96.4 | 95.1 |
| 2014 | 92.6 | 95.3 | 94.4 | 88.6 | 93.9 | 92.0 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std V who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 75.3 | 84.1 | 80.1 | 43.1 | 52.9 | 48.5 |
| 2011 | 64.6 | 74.4 | 70.4 | 29.1 | 36.1 | 33.3 |
| 2012 | 64.3 | 74.9 | 70.6 | 38.0 | 51.5 | 45.9 |
| 2013 | 48.6 | 66.4 | 61.1 | 35.9 | 42.3 | 40.2 |
| 2014 | 42.9 | 64.4 | 56.4 | 25.6 | 49.7 | 39.3 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Kerala rubal

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 12.3 | 12.2 | 23.5 | 40.9 | 11.2 | 100 |
| II | 7.4 | 7.0 | 22.1 | 30.4 | 33.2 | 100 |
| III | 6.6 | 5.3 | 12.4 | 27.1 | 48.5 | 100 |
| IV | 5.2 | 5.3 | 12.6 | 26.8 | 50.2 | 100 |
| V | 2.0 | 5.1 | 5.0 | 19.5 | 68.5 | 100 |
| VI | 0.8 | 2.9 | 5.2 | 15.0 | 76.1 | 100 |
| VII | 0.7 | 1.5 | 4.5 | 13.2 | 80.0 | 100 |
| VIII | 0.5 | 1.1 | 1.9 | 8.5 | 88.0 | 100 |
| Total | 4.4 | 5.0 | 10.8 | 22.5 | 57.3 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 6.6\% children cannot even read capital letters, 5.3\% can read capital letters but not more, $12.4 \%$ can read small letters but not words or higher, $27.1 \%$ can read words but not sentences, and $48.5 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 67.2 |  |
| II | 70.1 | 79.3 |
| III | 65.7 | 84.1 |
| IV | 68.8 | 81.1 |
| V | 69.0 | 85.5 |
| VI |  | 87.1 |
| VII |  | 87.5 |
| VIII | 68.2 | 82.4 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Govt. | Pvt. | Other |  |  |  |
| Age 3 | 70.1 | 8.9 |  |  | 21.0 | 100 |  |
| Age 4 | 64.6 | 19.8 |  |  | 15.6 | 100 |  |
| Age 5 | 21.2 | 13.6 | 38.5 | 17.4 | 0.2 | 9.1 | 100 |
| Age 6 | 3.7 | 5.6 | 64.2 | 22.9 | 0.4 | 3.3 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time \% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $7.3 \%$ in 2006, $3.9 \%$ in 2009, $3.3 \%$ in 2011 and 6.2 \% in 2014.

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $48 \%$ children are 8 years old but there are also $16.7 \%$ who are $7,19.1 \%$ who are 9 , $7.4 \%$ who are 10 and $3.4 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^46]Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | :---: | ---: | ---: | :---: | :---: | :---: |
| I | 60.5 | 29.1 | 5.5 | 2.1 | 2.8 | 100 |
| II | 33.4 | 41.8 | 12.4 | 6.3 | 6.2 | 100 |
| III | 21.2 | 36.8 | 17.3 | 10.4 | 14.3 | 100 |
| IV | 12.8 | 27.8 | 18.6 | 15.3 | 25.5 | 100 |
| V | 7.7 | 23.7 | 16.3 | 18.2 | 34.1 | 100 |
| VI | 5.8 | 17.2 | 14.4 | 18.1 | 44.6 | 100 |
| VII | 3.6 | 12.7 | 10.6 | 18.7 | 54.5 | 100 |
| VIII | 2.1 | 9.1 | 9.1 | 14.1 | 65.6 | 100 |
| Total | 18.7 | 24.9 | 13.0 | 12.8 | 30.6 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $21.2 \%$ children cannot even read letters, $36.8 \%$ can read letters but not more, $17.3 \%$ can read words but not Std I level text or higher, 10.4\% can read Std I level text but not Std II level text, and $14.3 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 93.0 | 96.4 | 93.6 | 80.4 | 88.2 | 81.6 |
| 2011 | 72.6 | 92.7 | 76.7 | 48.4 | 77.2 | 53.7 |
| 2012 | 74.1 | 92.3 | 78.4 | 39.5 | 76.5 | 46.7 |
| 2013 | 66.0 | 83.7 | 70.9 | 38.0 | 74.7 | 46.2 |
| 2014 | 60.3 | 83.2 | 66.6 | 32.2 | 73.7 | 42.0 |

* This is the weighted average for children in government and private schools only.

| 2010 | 68.4 | 77.5 | 69.7 | 55.2 | 66.0 | 56.7 |
| 2011 | 39.1 | 70.7 | 44.6 | 33.4 | 65.9 | 38.3 |
| 2012 | 33.5 | 70.3 | 39.9 | 27.5 | 64.5 | 33.1 |
| 2013 | 29.4 | 69.9 | 37.2 | 25.9 | 57.7 | 31.8 |
| 2014 | 31.0 | 70.6 | 40.8 | 27.8 | 58.3 | 34.1 |

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

## Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | ot even <br> $1-9$ | Recognize numbers |  | Can <br> subtract | Can <br> divide | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
|  |  | $10-99$ | I | 57.3 | 31.4 | 9.3 |
| 1.4 | 0.6 | 100 |  |  |  |  |
| II | 29.4 | 44.5 | 21.8 | 3.2 | 1.1 | 100 |
| III | 17.4 | 41.8 | 30.1 | 8.0 | 2.8 | 100 |
| IV | 9.6 | 33.1 | 34.5 | 14.1 | 8.7 | 100 |
| V | 6.4 | 27.0 | 35.7 | 17.1 | 13.9 | 100 |
| VI | 3.7 | 21.3 | 36.2 | 19.4 | 19.5 | 100 |
| VII | 2.5 | 14.8 | 37.6 | 21.0 | 24.1 | 100 |
| VIII | 1.8 | 10.4 | 33.8 | 23.7 | 30.3 | 100 |
| Total | 16.3 | 28.2 | 29.7 | 13.4 | 12.5 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $17.4 \%$ children cannot even recognize numbers 1-9, $41.8 \%$ can recognize numbers up to 9 but not more, $30.1 \%$ can recognize numbers up to 99 but cannot do subtraction, $8 \%$ can do subtraction but cannot do division, and $2.8 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 91.8 | 96.0 | 92.6 | 76.7 | 85.2 | 78.1 |
| 2011 | 71.7 | 90.4 | 75.6 | 39.6 | 72.6 | 45.7 |
| 2012 | 73.1 | 93.3 | 77.9 | 35.0 | 73.6 | 42.6 |
| 2013 | 69.4 | 85.9 | 74.0 | 34.8 | 72.6 | 43.3 |
| 2014 | 64.9 | 85.5 | 70.5 | 30.9 | 72.6 | 40.8 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  |  | \% Children in Std V who can <br> do division |  |  |
| :---: | :---: | :---: | :---: | ---: | ---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 57.2 | 69.8 | 59.0 | 38.0 | 50.7 | 39.8 |
| 2011 | 24.0 | 55.5 | 29.5 | 14.8 | 35.5 | 17.9 |
| 2012 | 16.6 | 49.7 | 22.3 | 8.9 | 31.2 | 12.3 |
| 2013 | 15.4 | 45.4 | 21.2 | 10.4 | 30.9 | 14.2 |
| 2014 | 15.2 | 46.0 | 22.8 | 10.0 | 28.5 | 13.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Madhya Pradesh rural

| :--- | :---: | :---: |
| I | 59.5 |  |
| II | 47.3 | 41.7 |
| III | 47.2 | 44.8 |
| IV | 50.4 | 54.5 |
| V | 49.2 | 50.9 |
| VI | 49.0 | 43.9 |
| VII | 46.2 | 53.0 |
| VIII | 45.5 | 48.5 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Age: 11-14 BOYS | 43.2 | 55.1 | 0.2 | 1.6 | 100 |
| Age: 11-14 GIRLS | 44.9 | 52.2 | 0.1 | 2.9 | 100 |
| Age: 15-16 ALL | 19.6 | 71.0 | 0.2 | 9.2 | 100 |
| Age: 15-16 BOYS | 18.6 | 72.2 | 0.1 | 9.1 | 100 |
| Age: 15-16 GIRLS | 20.6 | 70.0 | 0.2 | 9.3 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi or anganwadi | In LKG/ UKG | In school |  |  | Not in school or preschool | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Govt. | Pvt. | Other |  |  |
| Age 3 | 75.8 | 8.8 |  |  |  | 15.4 | 100 |
| Age 4 | 74.9 | 18.9 |  |  |  | 6.2 | 100 |
| Age 5 | 47.7 | 19.9 | 20.6 | 8.6 | 0.1 | 3.2 | 100 |
| Age 6 | 10.2 | 7.2 | 64.6 | 16.1 | 0.2 | 1.7 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time \% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $6.1 \%$ in 2006, 2\% in 2009, 1.8\% in 2011 and 2.9\% in 2014.

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 9.6 | 57.5 | 28.5 | 4.4 |  |  |  |  |  |  |  |  | 100 |
| II | 0.8 | 5.4 | 38.1 | 50.5 | 5.2 |  |  |  |  |  |  |  | 100 |
| III |  | . 2 | 5.1 | 34.0 | 52.9 | 6.7 |  |  |  |  |  |  | 100 |
| IV | 1.2 |  |  | 5.4 | 31.3 | 55.8 | 6.4 |  |  |  |  |  | 100 |
| V | 5.0 |  |  |  |  | 33.3 | 53.3 | 6.9 | 1.5 |  |  |  | 100 |
| VI | 4.7 |  |  |  |  |  | 29.5 | 56.9 | 6.4 | 2.5 |  |  | 100 |
| VII | 5.8 |  |  |  |  |  |  | 32.9 | 49.6 | 10.0 | 1. | 7 | 100 |
| VIII | 1.3 |  |  |  |  |  |  | 5.8 | 29.3 | 58.0 | 5. | 6 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $34 \%$ children are 8 years old but there are also $5.1 \%$ who are $7,52.9 \%$ who are 9 and $6.7 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^48]Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 45.2 | 34.0 | 13.6 | 4.3 | 2.9 | 100 |
| II | 16.8 | 24.7 | 22.1 | 18.4 | 17.9 | 100 |
| III | 10.7 | 17.2 | 18.0 | 20.3 | 33.8 | 100 |
| IV | 6.2 | 11.5 | 13.5 | 20.7 | 48.2 | 100 |
| V | 5.5 | 9.0 | 11.4 | 20.6 | 53.5 | 100 |
| VI | 4.1 | 6.4 | 8.7 | 16.1 | 64.8 | 100 |
| VII | 3.3 | 4.0 | 7.4 | 15.1 | 70.2 | 100 |
| VIII | 1.9 | 2.8 | 6.1 | 12.6 | 76.5 | 100 |
| Total | 11.8 | 13.8 | 12.6 | 16.0 | 45.8 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 10.7\% children cannot even read letters, $17.2 \%$ can read letters but not more, $18 \%$ can read words but not Std I level text or higher, $20.3 \%$ can read Std I level text but not Std II level text, and $33.8 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.2 | 98.7 | 98.2 | 93.3 | 91.6 | 93.2 |
| 2011 | 95.2 | 98.0 | 95.5 | 86.0 | 92.1 | 86.6 |
| 2012 | 90.7 | 89.4 | 90.5 | 79.5 | 85.0 | 80.2 |
| 2013 | 84.5 | 87.2 | 84.9 | 75.3 | 85.6 | 76.7 |
| 2014 | 82.4 | 86.9 | 83.2 | 70.9 | 78.4 | 72.2 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

## दाजी आजोबा आजारी असतात. ते खूप थकलेले दिसतात. हल्ली त्यांना नीट दिसत नाही. आजोबांचा नातू रमेश त्यांची खूप काळजी घेतो. त्यांना खूप खोकलाही झाला आहे. रमेश त्यांना वेळेवर औषध देतो. नीट दिसत नसल्यामुले आजोबा घरात बसून असतात. रमेश त्यांच्या हाताला धरून घरातल्या घरात फिरवतो. घरात बसून आजोबा जुनी गाणी ऐकतात. त्यांना नवीन गाणीही ऐकायला आवडतात. आजोबांना बरे वाटल्यावर दोघे लांबवर फिरायला जाणार आहेत.

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 89.4 | 88.4 | 89.3 | 71.0 | 77.6 | 73.2 |
| 2011 | 81.0 | 81.5 | 81.0 | 62.1 | 66.0 | 63.5 |
| 2012 | 72.5 | 75.5 | 72.9 | 55.3 | 62.2 | 58.3 |
| 2013 | 70.5 | 74.7 | 71.1 | 58.2 | 61.3 | 59.5 |
| 2014 | 68.6 | 70.1 | 68.8 | 51.7 | 56.2 | 53.5 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even |  |  |  |  |  |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
|  | Recognize numbers |  | Can <br> subtract | Can <br> divide | Total |  |
|  |  | $1-9$ | $10-99$ |  |  |  |
| I | 36.1 | 47.4 | 15.0 | 0.7 | 0.8 | 100 |
| II | 13.5 | 41.8 | 38.8 | 5.3 | 0.6 | 100 |
| III | 7.4 | 28.4 | 45.5 | 16.3 | 2.4 | 100 |
| IV | 3.6 | 21.5 | 37.1 | 26.3 | 11.5 | 100 |
| V | 4.5 | 16.2 | 38.2 | 22.2 | 18.9 | 100 |
| VI | 2.6 | 12.3 | 38.0 | 24.4 | 22.7 | 100 |
| VII | 2.3 | 9.0 | 38.7 | 21.7 | 28.4 | 100 |
| VIII | 1.4 | 4.9 | 38.7 | 22.1 | 32.9 | 100 |
| Total | 9.0 | 22.8 | 36.1 | 17.4 | 14.7 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $7.4 \%$ children cannot even recognize numbers 1-9, $28.4 \%$ can recognize numbers up to 9 but not more, $45.5 \%$ can recognize numbers up to 99 but cannot do subtraction, $16.3 \%$ can do subtraction but cannot do division, and $2.4 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 97.8 | 98.0 | 97.8 | 87.0 | 89.0 | 87.1 |
| 2011 | 95.4 | 97.9 | 95.6 | 78.6 | 86.9 | 79.3 |
| 2012 | 91.0 | 92.9 | 91.3 | 67.4 | 78.2 | 68.8 |
| 2013 | 88.8 | 89.4 | 88.9 | 63.2 | 76.9 | 65.1 |
| 2014 | 85.4 | 91.0 | 86.5 | 61.6 | 76.6 | 64.1 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  |  | \% Children in Std V who can <br> do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 71.8 | 70.8 | 71.8 | 39.9 | 44.6 | 41.4 |
| 2011 | 58.5 | 59.6 | 58.6 | 31.4 | 35.2 | 32.8 |
| 2012 | 39.9 | 46.9 | 40.6 | 20.2 | 25.8 | 22.6 |
| 2013 | 31.9 | 42.2 | 33.3 | 16.3 | 20.4 | 18.1 |
| 2014 | 37.3 | 40.6 | 37.8 | 16.6 | 22.2 | 18.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Maharashtra rural

Facilitated by PRATHAM

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 61.6 | 16.1 | 11.8 | 7.9 | 2.6 | 100 |
| II | 40.4 | 23.2 | 21.6 | 10.5 | 4.4 | 100 |
| III | 26.3 | 23.4 | 25.8 | 16.9 | 7.7 | 100 |
| IV | 18.9 | 18.7 | 26.9 | 21.9 | 13.7 | 100 |
| V | 13.7 | 16.2 | 23.1 | 25.4 | 21.5 | 100 |
| VI | 9.5 | 12.1 | 21.7 | 25.5 | 31.2 | 100 |
| VII | 6.8 | 9.7 | 19.4 | 25.2 | 38.9 | 100 |
| VIII | 4.5 | 7.4 | 17.2 | 22.8 | 48.1 | 100 |
| Total | 22.9 | 15.9 | 20.9 | 19.5 | 20.8 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 26.3 \% children cannot even read capital letters, $23.4 \%$ can read capital letters but not more, $25.8 \%$ can read small letters but not words or higher, $16.9 \%$ can read words but not sentences, and $7.7 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

## Table 11: \% Children by class who CAN COMPREHEND

 ENGLISH All schools 2014| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 64.4 |  |
| II | 62.6 | 57.5 |
| III | 64.4 | 55.7 |
| IV | 65.5 | 54.8 |
| V | 62.0 | 62.7 |
| VI | 60.2 | 63.3 |
| VII | 60.1 | 63.7 |
| VIII | 59.5 | 60.6 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| TLM grant | 779 | 68.4 | 28.0 | 3.6 | 832 | 4.6 | 92.6 | 2.9 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 14.6 | 84.8 | 0.6 |
|  | White wash/plastering | 56.4 | 42.7 | 1.0 |
|  | Repair of drinking water facility | 48.9 | 50.2 | 1.0 |
|  | Repair of toilet | 42.1 | 56.6 | 1.3 |
| Purchase | Mats, Tat patti etc. | 36.2 | 62.2 | 1.6 |
|  | Charts, globes or other teaching <br> material | 61.5 | 37.4 | 1.2 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 1.2 |
| ---: | :---: |
| Jan to June 2014 | 3.9 |
| July to Sept 2014 | 85.9 |
| After Sept 2014 | 9.1 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 95.2 |
| Average number of members present in last meeting | 11 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 98.1 | 98.6 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 93.1 | 94.5 |
| :--- | ---: | :---: |
| For some teachers | 5.0 | 4.7 |
| For no teachers | 1.6 | 0.5 |
| Don't know | 0.4 | 0.4 |
| Of the schools which have <br> received manual, \% schools <br> which could show it | 88.7 | 84.4 |

| Age: 15-16 BOYS | 17.5 | 75.3 | 0.4 | 6.9 | 100 |
| Age: 15-16 GIRLS | 24.0 | 66.4 | 0.3 | 9.3 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG |  | In school |  |  | Not in <br> school <br> or pre- <br> school |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total |  |  |  |  |  |
| Age 3 |  | 28.0 |  |  |  | 56.2 | 100 |
| Age 4 | 7.7 | 72.0 |  |  |  | 20.4 | 100 |
| Age 5 | 0.3 | 41.9 | 13.5 | 39.3 | 0.5 | 4.5 | 100 |
| Age 6 | 0.0 | 31.5 | 17.9 | 49.4 | 0.4 | 0.9 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $5.9 \%$ in 2006, 2.3\% in 2009, 1.7\% in 2011 and 3.1\% in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 9.1 | 28.5 | 34.0 | 17.3 | 7.3 |  |  |  | 3.9 |  |  |  | 100 |
| \|| | 10.8 | 12.1 | 24.5 | 26.9 | 13.4 | 7.2 |  |  |  | 3 |  |  | 100 |
| III | 2. | 0 | 6.2 | 23.4 | 27.9 | 22.3 | 10.7 | 5.3 |  | 2. |  |  | 100 |
| IV |  | 7.0 |  |  | 18.3 | 34.1 | 20.7 | 14.2 |  | 5. |  |  | 100 |
| V |  | 2. | 9 |  | 5.9 | 23.4 | 24.3 | 26.0 | 10.9 |  | 6.7 |  | 100 |
| VI | 1.4 |  |  |  |  | 6.1 | 19.8 | 34.2 | 23.6 | 9.7 | 5.2 |  | 100 |
| VII | 2.1 |  |  |  |  |  | 5.7 | 22.3 | 31.9 | 25.0 | 9.0 | 3.9 | 100 |
| VIII | 2.4 |  |  |  |  |  |  | 9.6 | 31.3 | 32.6 | 16.7 | 7.6 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $23.4 \%$ children are 8 years old but there are also $6.2 \%$ who are $7,27.9 \%$ who are 9 , $22.3 \%$ who are $10,10.7 \%$ who are $11,5.3 \%$ who are 12 and $2.4 \%$ are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^50]Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 6.2 | 40.0 | 41.7 | 8.9 | 3.2 | 100 |
| II | 5.5 | 30.9 | 32.2 | 21.6 | 9.7 | 100 |
| III | 0.8 | 12.5 | 22.6 | 29.8 | 34.3 | 100 |
| IV | 0.0 | 8.5 | 17.1 | 23.5 | 50.9 | 100 |
| V | 0.4 | 6.4 | 9.5 | 17.2 | 66.6 | 100 |
| VI | 0.0 | 3.3 | 6.2 | 13.6 | 76.8 | 100 |
| VII | 1.0 | 1.8 | 3.7 | 8.1 | 85.4 | 100 |
| VIII | 0.4 | 1.5 | 2.2 | 7.6 | 88.4 | 100 |
| Total | 2.4 | 16.8 | 20.5 | 17.2 | 43.1 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $0.8 \%$ children cannot even read letters, $12.5 \%$ can read letters but not more, $22.6 \%$ can read words but not Std I level text or higher, 29.8\% can read Std I level text but not Std II level text, and $34.3 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  |  | \% Children in Std III who can <br> read at least words |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.6 | 98.8 | 98.7 | 78.9 | 93.0 | 87.8 |
| 2011 | 95.7 | 99.5 | 98.2 | 80.9 | 95.4 | 91.1 |
| 2012 | 98.4 | 98.4 | 98.4 | 75.4 | 91.1 | 85.7 |
| 2013 | 92.3 | 95.6 | 94.5 | 82.8 | 92.8 | 89.8 |
| 2014 | 89.8 | 96.6 | 94.6 | 73.2 | 91.4 | 86.9 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 62.1 | 81.4 | 74.2 | 58.0 | 68.5 | 64.9 |
| 2011 | 57.1 | 85.9 | 77.4 | 48.5 | 79.9 | 71.4 |
| 2012 | 54.1 | 56.1 | 55.5 | 46.9 | 71.0 | 63.6 |
| 2013 | 72.3 | 84.1 | 81.0 | 48.1 | 70.3 | 63.6 |
| 2014 | 60.4 | 79.8 | 74.6 | 43.1 | 74.7 | 66.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even |  |  |  |  |  |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
|  | Recognize numbers |  | Can <br> subtract | Can <br> divide | Total |  |
| I | 4.8 | 11.7 | $10-99$ | 68.3 | 13.5 | 1.8 |
| II | 4.5 | 10.1 | 57.2 | 24.3 | 3.8 | 100 |
| III | 0.4 | 1.9 | 38.3 | 38.4 | 20.9 | 100 |
| IV | 0.0 | 0.3 | 23.1 | 37.3 | 39.3 | 100 |
| V | 0.0 | 0.8 | 13.9 | 30.6 | 54.7 | 100 |
| VI | 0.0 | 0.3 | 14.6 | 24.3 | 60.8 | 100 |
| VII | 1.0 | 0.0 | 12.2 | 19.9 | 67.0 | 100 |
| VIII | 0.4 | 0.0 | 7.5 | 19.5 | 72.6 | 100 |
| Total | 1.9 | 4.4 | 35.2 | 25.9 | 32.7 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $0.4 \%$ children cannot even recognize numbers 1-9, 1.9\% can recognize numbers up to 9 but not more, $38.3 \%$ can recognize numbers up to 99 but cannot do subtraction, 38.4\% can do subtraction but cannot do division, and $20.9 \%$ can do division. For each class, the total of all these exclusive categories is 100\%.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.5 | 97.8 | 98.1 | 81.0 | 95.0 | 89.7 |
| 2011 | 95.5 | 99.5 | 98.1 | 90.1 | 96.7 | 94.7 |
| 2012 | 98.7 | 98.3 | 98.5 | 90.6 | 97.8 | 95.4 |
| 2013 | 92.0 | 96.3 | 94.9 | 97.1 | 97.2 | 97.2 |
| 2014 | 92.5 | 96.9 | 95.6 | 93.5 | 99.3 | 97.9 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  |  | \% Children in Std V who can <br> do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 56.4 | 78.8 | 70.2 | 20.3 | 54.2 | 41.9 |
| 2011 | 54.4 | 83.5 | 74.9 | 27.4 | 57.9 | 49.7 |
| 2012 | 56.2 | 56.2 | 56.2 | 26.5 | 52.9 | 44.7 |
| 2013 | 66.6 | 72.5 | 71.0 | 36.7 | 44.3 | 42.0 |
| 2014 | 67.4 | 79.9 | 76.6 | 43.1 | 58.7 | 54.7 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

| VIII | 0.4 | 0.0 | 1.1 | 3.6 | 94.9 | 100 |
| Total | 2.0 | 2.1 | 15.7 | 25.4 | 54.8 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 1\% children cannot even read capital letters, 1.1\% can read capital letters but not more, $12.7 \%$ can read small letters but not words or higher, $33 \%$ can read words but not sentences, and $52.3 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 63.0 |  |
| II | 59.4 | 53.4 |
| III | 64.1 | 68.0 |
| IV | 59.8 | 74.1 |
| V |  | 74.7 |
| VI |  | 80.1 |
| VII |  | 86.7 |
| VIII |  | 69.6 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 9 OUT OF 9 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |
| :--- | ---: | ---: | ---: | ---: | :---: |
| Primary schools <br> (Std I-IVN) | 97 | 99 | 129 | 103 | 100 |

| TLM grant | 162 | 37.7 | 50.0 | 12.4 | 174 | 3.5 | 74.7 | 21.8 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | $\%$ Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 15.1 | 78.2 | 6.7 |
|  | White wash/plastering | 29.3 | 64.4 | 6.3 |
|  | Repair of drinking water facility | 20.5 | 72.2 | 7.4 |
|  | Repair of toilet | 15.7 | 77.0 | 7.3 |
| Purchase | Mats, Tat patti etc. | 35.0 | 57.1 | 7.9 |
|  | Charts, globes or other teaching <br> material | 53.9 | 38.8 | 7.3 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
87.6

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 4.0 |
| ---: | :---: |
| Jan to June 2014 | 31.5 |
| July to Sept 2014 | 59.7 |
| After Sept 2014 | 4.8 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 82.6 |
| Average number of members present in last meeting | 13 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 37.6 | 56.7 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 19.7 | 18.4 |
| :--- | :---: | :---: |
| For some teachers | 26.8 | 41.8 |
| For no teachers | 50.7 | 28.6 |
| Don't know | 2.8 | 11.2 |
| Of the schools which have <br> received manual, \% schools <br> which could show it | 41.9 | 46.6 |

| In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Govt. | Pvt. | Other |  |  |  |
| Age 3 | 38.0 | 24.8 |  |  | 37.2 | 100 |  |
| Age 4 | 20.5 | 63.8 |  |  | 15.7 | 100 |  |
| Age 5 | 3.0 | 24.9 | 24.0 | 37.2 | 2.6 | 8.4 | 100 |
| Age 6 | 2.2 | 17.2 | 30.5 | 43.7 | 1.2 | 5.2 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $5.4 \%$ in 2006, $4.4 \%$ in 2009, $4.7 \%$ in 2011 and $4.9 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 10.8 | 23.5 | 28.9 | 17.5 | 8.1 | 6.6 |  |  |  | 7 |  |  | 100 |
| \|| | 6.1 | 10.0 | 19.6 | 24.0 | 14.9 | 13.3 |  |  | 12 |  |  |  | 100 |
| III | 2. | . 4 | 5.8 | 19.7 | 20.7 | 21.3 | 10.0 | 10.4 |  | 9. |  |  | 100 |
| IV |  | 2.8 |  | 7.4 | 13.1 | 24.3 | 15.3 | 15.8 | 12.1 | 5.2 |  | . 9 | 100 |
| V | 7.8 |  |  |  |  | 18.9 | 19.6 | 21.3 | 14.8 | 11.1 | 6.6 |  | 100 |
| VI | 2.3 |  |  |  |  | 8.3 | 10.7 | 22.5 | 21.4 | 19.0 | 10.0 | 5.8 | 100 |
| VII | 6.8 |  |  |  |  |  |  | 17.9 | 25.1 | 22.1 | 14.8 | 13.4 | 100 |
| VIII | 5.1 |  |  |  |  |  |  |  | 17.1 | 32.1 | 22.8 | 22.9 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $19.7 \%$ children are 8 years old but there are also $5.8 \%$ who are $7,20.7 \%$ who are 9 , $21.3 \%$ who are $10,10 \%$ who are $11,10.4 \%$ who are 12 and $9.8 \%$ are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^53]acilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 14.5 | 38.9 | 34.0 | 10.6 | 2.0 | 100 |
| II | 9.8 | 23.2 | 31.6 | 27.0 | 8.4 | 100 |
| III | 1.3 | 12.3 | 24.0 | 37.6 | 24.8 | 100 |
| IV | 1.3 | 5.0 | 16.5 | 36.7 | 40.5 | 100 |
| V | 0.3 | 3.9 | 10.6 | 27.1 | 58.3 | 100 |
| VI | 0.7 | 2.3 | 7.7 | 22.8 | 66.6 | 100 |
| VII | 0.0 | 1.4 | 3.4 | 14.8 | 80.5 | 100 |
| VIII | 0.4 | 0.4 | 1.8 | 9.3 | 88.1 | 100 |
| Total | 5.0 | 14.9 | 20.3 | 24.4 | 35.4 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 1.3\% children cannot even read letters, $12.3 \%$ can read letters but not more, $24 \%$ can read words but not Std I level text or higher, $37.6 \%$ can read Std I level text but not Std II level text, and $24.8 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 95.8 | 98.8 | 97.0 | 83.9 | 90.3 | 86.6 |
| 2011 | 87.1 | 94.1 | 90.6 | 88.7 | 85.2 | 86.9 |
| 2012 | 95.7 | 97.6 | 96.5 | 76.2 | 92.2 | 83.0 |
| 2013 | 92.2 | 91.7 | 92.0 | 86.8 | 92.9 | 89.4 |
| 2014 | 89.7 | 90.3 | 90.0 | 86.4 | 86.5 | 86.4 |

* This is the weighted average for children in government and private schools only.

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 82.7 | 89.0 | 85.4 | 65.7 | 63.7 | 64.6 |
| 2011 | 60.0 | 69.3 | 65.4 | 46.1 | 56.9 | 52.9 |
| 2012 | 66.4 | 69.5 | 68.0 | 58.4 | 69.3 | 64.5 |
| 2013 | 83.0 | 83.3 | 83.1 | 57.7 | 68.9 | 62.9 |
| 2014 | 75.1 | 80.8 | 77.7 | 46.1 | 69.1 | 58.3 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| । | 13.1 | 37.1 | 47.5 | 2.3 | 0.0 | 100 |
| II | 9.0 | 16.4 | 63.2 | 10.3 | 1.1 | 100 |
| III | 1.6 | 5.5 | 64.3 | 26.2 | 2.3 | 100 |
| IV | 1.3 | 2.8 | 52.6 | 36.6 | 6.7 | 100 |
| V | 0.3 | 1.5 | 37.4 | 49.5 | 11.3 | 100 |
| VI | 0.2 | 1.1 | 30.6 | 46.6 | 21.6 | 100 |
| VII | 0.0 | 0.1 | 18.9 | 51.7 | 29.2 | 100 |
| VIII | 0.4 | 0.0 | 10.5 | 40.5 | 48.6 | 100 |
| Total | 4.6 | 11.5 | 46.5 | 27.4 | 10.0 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 1.6\% children cannot even recognize numbers 1-9, 5.5\% can recognize numbers up to 9 but not more, $64.3 \%$ can recognize numbers up to 99 but cannot do subtraction, $26.2 \%$ can do subtraction but cannot do division, and $2.3 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 87.9 | 98.8 | 92.4 | 81.9 | 89.3 | 85.1 |
| 2011 | 91.7 | 94.9 | 93.3 | 70.1 | 75.7 | 72.9 |
| 2012 | 95.2 | 97.0 | 96.0 | 72.6 | 88.3 | 79.4 |
| 2013 | 92.7 | 89.2 | 91.4 | 89.8 | 92.8 | 91.1 |
| 2014 | 91.4 | 90.2 | 90.8 | 92.7 | 93.1 | 92.9 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can <br> do division |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt.* |
| 2010 | 64.4 | 74.2 | 68.7 | 40.0 | 38.5 | 39.2 |
| 2011 | 38.8 | 43.9 | 41.7 | 14.5 | 24.3 | 20.7 |
| 2012 | 37.6 | 52.6 | 45.5 | 17.3 | 20.1 | 18.8 |
| 2013 | 45.1 | 45.9 | 45.5 | 16.9 | 17.1 | 17.0 |
| 2014 | 33.0 | 54.9 | 43.1 | 5.9 | 15.4 | 10.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

## Meghalaya rubal

Data has not been presented where sample size was insufficient.
Facilitated by PRATHAM

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 15.4 | 29.9 | 22.1 | 28.9 | 3.7 | 100 |
| II | 9.2 | 17.1 | 18.4 | 42.1 | 13.3 | 100 |
| III | 2.9 | 9.1 | 13.1 | 45.9 | 29.0 | 100 |
| IV | 1.8 | 4.7 | 8.2 | 37.9 | 47.4 | 100 |
| V | 0.0 | 4.0 | 4.7 | 31.7 | 59.6 | 100 |
| VI | 0.5 | 3.1 | 2.1 | 22.2 | 72.2 | 100 |
| VII | 0.7 | 1.8 | 1.1 | 17.9 | 78.5 | 100 |
| VIII | 0.4 | 0.3 | 1.6 | 7.9 | 89.8 | 100 |
| Total | 5.4 | 11.6 | 11.5 | 32.7 | 38.8 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 2.9\% children cannot even read capital letters, 9.1\% can read capital letters but not more, $13.1 \%$ can read small letters but not words or higher, $45.9 \%$ can read words but not sentences, and $29 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |

| I | 56.6 |  |
| II | 52.2 | 58.9 |
| III | 58.4 | 60.3 |
| IV | 67.3 | 64.7 |
| V | 70.0 | 74.3 |
| VI |  | 78.2 |
| VII |  | 89.0 |
| VIII |  | 69.4 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Development grant | 108 | 19.4 | 67.6 | 13.0 | 114 | 25.4 | 67.5 | 7.0 |
| TLM grant | 111 | 49.6 | 39.6 | 10.8 | 114 | 21.9 | 72.8 | 5.3 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 17.8 | 80.6 | 1.6 |
|  | White wash/plastering | 36.0 | 63.2 | 0.8 |
|  | Repair of drinking water facility | 10.2 | 88.2 | 1.6 |
|  | Repair of toilet | 17.3 | 81.1 | 1.6 |
| Purchase | Mats, Tat patti etc. | 21.7 | 75.8 | 2.5 |
|  | Charts, globes or other teaching <br> material | 56.3 | 40.6 | 3.1 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
91.3

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 5.6 |
| ---: | :---: |
| Jan to June 2014 | 50.5 |
| July to Sept 2014 | 41.1 |
| \% Schools that could give information Sept 2014 <br> members were present in the last meeting | 2.8 |
| Average number of members present in last meeting | 93.1 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Govt. | Pvt. | Other |  |  |  |
| Age 3 | 84.9 | 8.4 |  |  | 6.7 | 100 |  |
| Age 4 | 76.1 | 20.8 |  |  | 3.2 | 100 |  |
| Age 5 | 2.9 | 4.7 | 40.2 | 51.1 | 0.0 | 1.1 | 100 |
| Age 6 | 0.7 | 3.1 | 43.9 | 51.6 | 0.0 | 0.7 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $4.4 \%$ in 2006, $1.8 \%$ in 2009, 1\% in 2011 and $0.8 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 19.1 | 36.6 | 30.5 | 9.1 | 4.7 |  |  |  |  |  |  |  | 100 |
| \\| | 5.1 | 9.7 | 33.5 | 29.8 | 11.8 | 6.3 | 3.8 |  |  |  |  |  | 100 |
| III |  | 5 | 9.6 | 25.5 | 29.7 | 21.0 | 7.3 | 5.5 |  |  |  |  | 100 |
| IV | 1.5 |  |  | 8.4 | 22.0 | 36.9 | 10.4 | 13.1 | 7.8 |  |  |  | 100 |
| V | 1.2 |  |  |  | 5.6 | 27.1 | 26.0 | 22.7 | 10.5 | 5.3 | 1.7 |  | 100 |
| VI | 2.0 |  |  |  |  | 8.5 | 19.4 | 33.6 | 21.1 | 10.7 | 4.7 |  | 100 |
| VII | 4.1 |  |  |  |  |  | 6.1 | 26.3 | 30.1 | 20.6 | 9.5 | 3.4 | 100 |
| VIII | 3.5 |  |  |  |  |  |  | 7.7 | 28.4 | 32.8 | 18.9 | 8.9 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $25.5 \%$ children are 8 years old but there are also $9.6 \%$ who are $7,29.7 \%$ who are 9 , $21 \%$ who are $10,7.3 \%$ who are 11 and $5.5 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^55]acilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | :---: | :---: | :---: | :---: |
| I | 11.9 | 44.1 | 38.3 | 4.6 | 1.1 | 100 |
| II | 4.3 | 27.1 | 33.2 | 31.6 | 3.9 | 100 |
| III | 0.7 | 21.1 | 20.1 | 39.1 | 19.0 | 100 |
| IV | 0.2 | 17.9 | 13.0 | 31.3 | 37.6 | 100 |
| V | 0.9 | 13.1 | 11.4 | 22.5 | 52.1 | 100 |
| VI | 0.0 | 15.5 | 4.8 | 13.6 | 66.0 | 100 |
| VII | 0.3 | 10.6 | 5.3 | 8.2 | 75.6 | 100 |
| VIII | 0.0 | 8.4 | 3.2 | 5.6 | 82.8 | 100 |
| Total | 3.0 | 22.1 | 18.9 | 20.2 | 35.8 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $0.7 \%$ children cannot even read letters, $21.1 \%$ can read letters but not more, $20.1 \%$ can read words but not Std I level text or higher, $39.1 \%$ can read Std I level text but not Std II level text, and 19\% can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.6 | 99.3 | 98.6 | 97.5 | 95.2 | 97.3 |
| 2011 | 97.3 | 99.7 | 97.7 | 94.3 | 97.6 | 94.7 |
| 2012 | 97.8 | 97.8 | 97.8 | 89.8 | 93.5 | 90.7 |
| 2013 | 97.5 | 96.9 | 97.3 | 88.4 | 97.4 | 91.4 |
| 2014 | 97.2 | 94.0 | 95.7 | 70.6 | 90.4 | 78.2 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 95.5 | 82.9 | 94.7 | 68.0 | 84.0 | 72.1 |
| 2011 | 85.1 | 86.6 | 85.3 | 78.6 | 77.2 | 78.4 |
| 2012 | 73.2 | 84.3 | 75.8 | 55.2 | 71.5 | 59.6 |
| 2013 | 81.8 | 90.5 | 84.1 | 64.3 | 80.3 | 69.6 |
| 2014 | 61.9 | 81.0 | 68.9 | 47.1 | 60.9 | 52.1 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 8.9 | 32.3 | 53.7 | 4.8 | 0.3 | 100 |
| II | 2.9 | 12.2 | 60.6 | 23.3 | 1.1 | 100 |
| III | 0.4 | 2.8 | 31.6 | 59.3 | 6.0 | 100 |
| IV | 0.0 | 1.2 | 18.2 | 59.5 | 21.2 | 100 |
| V | 0.4 | 1.1 | 11.2 | 47.4 | 40.0 | 100 |
| VI | 0.0 | 0.7 | 5.5 | 29.5 | 64.3 | 100 |
| VII | 0.0 | 0.0 | 2.6 | 19.7 | 77.7 | 100 |
| VIII | 0.0 | 0.0 | 0.4 | 14.1 | 85.5 | 100 |
| Total | 2.1 | 8.4 | 27.7 | 31.4 | 30.4 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 0.4\% children cannot even recognize numbers 1-9, 2.8\% can recognize numbers up to 9 but not more, $31.6 \%$ can recognize numbers up to 99 but cannot do subtraction, 59.3\% can do subtraction but cannot do division, and 6\% can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.2 | 97.3 | 98.2 | 97.0 | 98.2 | 97.0 |
| 2011 | 98.7 | 99.3 | 98.8 | 94.7 | 96.6 | 94.9 |
| 2012 | 98.8 | 98.4 | 98.7 | 96.2 | 97.8 | 96.6 |
| 2013 | 98.2 | 96.8 | 97.7 | 98.2 | 98.7 | 98.4 |
| 2014 | 98.5 | 95.5 | 97.2 | 96.1 | 98.1 | 96.9 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  |  | \% Children in Std V who can <br> do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt.* |
| 2010 | 89.5 | 79.2 | 88.9 | 57.0 | 76.1 | 62.0 |
| 2011 | 87.0 | 84.2 | 86.6 | 68.5 | 60.8 | 67.7 |
| 2012 | 82.2 | 84.3 | 82.7 | 41.6 | 49.0 | 43.6 |
| 2013 | 85.6 | 81.0 | 84.4 | 45.9 | 49.4 | 47.0 |
| 2014 | 78.5 | 84.5 | 80.7 | 37.1 | 45.1 | 40.0 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 13.7 | 26.5 | 37.0 | 22.1 | 0.8 | 100 |
| II | 3.3 | 17.1 | 26.5 | 48.6 | 4.5 | 100 |
| III | 0.4 | 8.4 | 17.6 | 55.5 | 18.2 | 100 |
| IV | 0.0 | 5.5 | 11.7 | 48.8 | 34.0 | 100 |
| V | 0.4 | 2.4 | 7.3 | 37.4 | 52.5 | 100 |
| VI | 0.0 | 0.7 | 3.1 | 28.9 | 67.3 | 100 |
| VII | 0.0 | 0.5 | 0.6 | 19.0 | 79.9 | 100 |
| VIII | 0.0 | 0.3 | 0.7 | 11.4 | 87.6 | 100 |
| Total | 3.1 | 9.6 | 15.8 | 35.2 | 36.4 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, $0.4 \%$ children cannot even read capital letters, $8.4 \%$ can read capital letters but not more, $17.6 \%$ can read small letters but not words or higher, $55.5 \%$ can read words but not sentences, and $18.2 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 53.2 |  |
| II | 52.9 | 57.9 |
| III | 58.1 | 49.4 |
| IV | 63.6 | 59.9 |
| V | 64.4 | 66.3 |
| VI | 75.6 | 76.1 |
| VII |  | 83.2 |
| VIII | 61.5 | 68.1 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Std | Category | 2011 | 2012 | 2013 | 2014 |
| Std I-V | Govt. no tuition | 86.7 | 72.4 | 64.4 | 58.7 |
|  | Govt. + Tuition | 0.6 | 2.5 | 2.3 | 0.3 |
|  | Pvt. no tuition | 11.3 | 22.3 | 31.7 | 37.7 |
|  | Pvt. + Tuition | 1.5 | 2.8 | 1.7 | 3.3 |
|  | Total | 100 | 100 | 100 | 100 |
| Std VI-VIII | Govt. no tuition | 87.5 | 70.6 | 70.2 | 68.3 |
|  | Govt. + Tuition | 1.6 | 5.0 | 1.0 | 0.3 |
|  | Pvt. no tuition | 9.2 | 20.9 | 27.1 | 29.7 |
|  | Pvt. + Tuition | 1.8 | 3.6 | 1.8 | 1.7 |

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 8 OUT OF 8 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |
| :--- | ---: | ---: | ---: | ---: | ---: |

| Development grant | 166 | 60.8 | 30.7 | 8.4 | 183 | 52.5 | 42.6 | 4.9 |
| TLM grant | 167 | 75.5 | 19.8 | 4.8 | 183 | 25.1 | 72.7 | 2.2 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 23.9 | 71.6 | 4.6 |
|  | White wash/plastering | 27.7 | 67.7 | 4.5 |
|  | Repair of drinking water facility | 27.4 | 69.4 | 3.2 |
|  | Repair of toilet | 47.9 | 50.9 | 1.2 |
| Purchase | Mats, Tat patti etc. | 14.7 | 82.2 | 3.2 |
|  | Charts, globes or other teaching <br> material | 41.2 | 57.0 | 1.8 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
95.6

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 10.4 |
| ---: | :---: |
| Jan to June 2014 | 58.5 |
| July to Sept 2014 | 29.9 |
| After Sept 2014 | 1.2 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 90.2 |
| Average number of members present in last meeting | 14 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 97.6 | 97.8 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 31.3 | 64.6 |
| :--- | :---: | :---: |
| For some teachers | 63.2 | 26.9 |
| For no teachers | 3.0 | 6.9 |
| Don't know | 2.5 | 1.7 |

| Age: 15-16 ALL | 44.5 | 37.6 | 0.0 | 18.0 | 100 |
| Age: 15-16 BOYS | 41.7 | 36.8 | 0.0 | 21.6 | 100 |
| Age: 15-16 GIRLS | 47.6 | 38.5 | 0.0 | 14.0 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Other |  |  |  |  |  |
| Age 3 | 15.0 | 12.8 |  |  | 72.2 | 100 |  |
| Age 4 | 13.0 | 62.1 |  |  | 24.9 | 100 |  |
| Age 5 | 2.9 | 22.6 | 47.3 | 24.3 | 0.0 | 2.9 | 100 |
| Age 6 | 1.9 | 8.2 | 55.7 | 33.2 | 0.0 | 1.0 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $6.4 \%$ in 2006, $3.7 \%$ in 2009, $2.5 \%$ in 2011 and $4.1 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 13.7 | 39.2 | 31.2 | 9.9 | 6.0 |  |  |  |  |  |  |  | 100 |
| \|| | 8.5 | 13.5 | 34.4 | 25.9 | 9.1 | 4.9 | 3.6 |  |  |  |  |  | 100 |
| III |  |  | 7.9 | 36.0 | 29.3 | 10.8 | 5.3 | 7.6 |  |  |  |  | 100 |
| IV | 2.6 |  |  | 7.8 | 32.8 | 29.2 | 10.4 | 8.0 | 5.7 | 3.5 |  |  | 100 |
| V | 2.7 |  |  |  | 8.2 | 35.4 | 22.9 | 16.5 | 8.0 | 6.2 |  |  | 100 |
| VI | 2.7 |  |  |  |  | 10.4 | 23.5 | 29.3 | 15.5 | 11.2 | 7.5 |  | 100 |
| VII | 2.2 |  |  |  |  |  | 7.6 | 25.9 | 32.8 | 20.5 | 6.2 | 4.9 | 100 |
| VIII | 2.5 |  |  |  |  |  |  | 8.2 | 29.5 | 34.4 | 17.4 | 7.9 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $36 \%$ children are 8 years old but there are also $7.9 \%$ who are $7,29.3 \%$ who are 9 , $10.8 \%$ who are $10,5.3 \%$ who are 11 and $7.6 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

[^57]Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 9.7 | 52.8 | 31.9 | 4.7 | 0.9 | 100 |
| II | 7.3 | 27.5 | 48.6 | 13.8 | 2.8 | 100 |
| III | 0.4 | 5.5 | 52.2 | 32.9 | 9.1 | 100 |
| IV | 0.3 | 2.9 | 28.5 | 43.5 | 24.8 | 100 |
| V | 0.0 | 1.3 | 16.1 | 41.1 | 41.6 | 100 |
| VI | 0.0 | 0.5 | 8.8 | 31.9 | 58.8 | 100 |
| VII | 0.1 | 0.2 | 4.0 | 20.9 | 74.7 | 100 |
| VIII | 0.0 | 0.3 | 1.4 | 8.0 | 90.3 | 100 |
| Total | 3.0 | 14.7 | 28.2 | 24.3 | 29.8 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $0.4 \%$ children cannot even read letters, $5.5 \%$ can read letters but not more, $52.2 \%$ can read words but not Std I level text or higher, 32.9\% can read Std I level text but not Std II level text, and 9.1\% can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.9 | 99.7 | 99.2 | 91.9 | 95.3 | 93.0 |
| 2011 | 98.2 | 98.6 | 98.3 | 84.8 | 92.4 | 87.5 |
| 2012 | 98.1 | 97.1 | 97.8 | 86.8 | 95.3 | 89.9 |
| 2013 | 87.4 | 94.2 | 89.9 | 85.1 | 95.8 | 88.8 |
| 2014 | 91.4 | 95.4 | 92.7 | 93.1 | 96.0 | 94.1 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 67.5 | 88.6 | 74.1 | 41.0 | 76.9 | 53.5 |
| 2011 | 70.3 | 79.8 | 74.1 | 48.4 | 71.8 | 59.0 |
| 2012 | 69.1 | 73.6 | 70.9 | 42.3 | 68.6 | 52.5 |
| 2013 | 73.4 | 87.9 | 78.6 | 51.8 | 63.9 | 56.4 |
| 2014 | 58.9 | 84.3 | 68.2 | 27.4 | 60.7 | 41.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even1-9 | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 7.6 | 34.8 | 54.5 | 2.7 | 0.4 | 100 |
| \\| | 7.4 | 19.3 | 55.0 | 17.7 | 0.7 | 100 |
| III | 0.4 | 4.7 | 54.7 | 38.4 | 1.9 | 100 |
| IV | 0.2 | 2.2 | 36.2 | 49.2 | 12.2 | 100 |
| V | 0.0 | 1.2 | 18.4 | 54.8 | 25.6 | 100 |
| VI | 0.0 | 0.4 | 14.1 | 53.9 | 31.6 | 100 |
| VII | 0.0 | 0.4 | 8.5 | 40.5 | 50.6 | 100 |
| VIII | 0.0 | 0.3 | 3.1 | 26.4 | 70.2 | 100 |
| Total | 2.6 | 10.2 | 35.7 | 33.2 | 18.4 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 0.4\% children cannot even recognize numbers 1-9, 4.7\% can recognize numbers up to 9 but not more, $54.7 \%$ can recognize numbers up to 99 but cannot do subtraction, $38.4 \%$ can do subtraction but cannot do division, and $1.9 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 98.4 | 99.7 | 98.8 | 92.4 | 97.2 | 93.9 |
| 2011 | 98.9 | 99.0 | 98.9 | 92.2 | 92.6 | 92.3 |
| 2012 | 98.4 | 97.2 | 98.0 | 90.7 | 95.7 | 92.5 |
| 2013 | 88.9 | 94.2 | 90.8 | 88.8 | 97.7 | 91.8 |
| 2014 | 91.7 | 94.6 | 92.6 | 94.1 | 96.6 | 95.0 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  |  | \% Children in Std V who can <br> do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 69.6 | 79.1 | 72.6 | 26.7 | 52.4 | 35.7 |
| 2011 | 72.8 | 77.3 | 74.7 | 34.1 | 48.5 | 40.6 |
| 2012 | 69.1 | 71.8 | 70.1 | 27.3 | 46.0 | 34.6 |
| 2013 | 58.6 | 64.0 | 60.5 | 21.2 | 30.3 | 24.6 |
| 2014 | 55.0 | 72.7 | 61.5 | 18.3 | 35.3 | 25.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

## Nagaland rural

Data has not been presented where sample size was insufficient.
Facilitated by PRATHAM

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 8.6 | 18.6 | 44.2 | 25.3 | 3.4 | 100 |
| II | 7.4 | 10.0 | 27.5 | 45.4 | 9.7 | 100 |
| III | 0.7 | 2.3 | 12.3 | 59.0 | 25.7 | 100 |
| IV | 0.4 | 1.6 | 6.8 | 43.9 | 47.2 | 100 |
| V | 0.3 | 0.3 | 3.3 | 33.6 | 62.6 | 100 |
| VI | 0.0 | 0.4 | 1.3 | 22.8 | 75.5 | 100 |
| VII | 0.1 | 0.1 | 0.9 | 13.3 | 85.7 | 100 |
| VIII | 0.0 | 0.4 | 0.3 | 3.9 | 95.3 | 100 |
| Total | 2.9 | 5.4 | 15.2 | 34.1 | 42.4 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, $0.7 \%$ children cannot even read capital letters, 2.3\% can read capital letters but not more, $12.3 \%$ can read small letters but not words or higher, $59 \%$ can read words but not sentences, and $25.7 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |

## RTE indicators

The Right of Children to Free and Compulsory Education (RTE) Act, 2009 specifies a series of norms and standards for a school. Data on selected measurable indicators of RTE are collected in ASER.

Table 17: Schools meeting selected RTE norms 2010-2014

| \% Schools meeting the following RTE norms: |  | 2010 | 2011 | 2012 | 2013 | 2014 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { PTR \& } \\ & \text { CTR } \end{aligned}$ | Pupil-teacher ratio (PTR) | 91.9 | 85.5 | 93.0 | 92.3 | 92.1 |
|  | Classroom-teacher ratio (CTR) | 78.6 | 61.1 | 63.3 | 59.8 | 73.9 |
| Building | Office/store/office cum store | 83.8 | 92.3 | 86.9 | 91.8 | 81.0 |
|  | Playground | 64.2 | 65.6 | 41.6 | 47.6 | 43.8 |
|  | Boundary wall/fencing | 42.8 | 34.5 | 52.9 | 37.0 | 52.6 |

| TLM grant | 239 | 72.4 | 21.3 | 6.3 | 227 | 22.9 | 70.9 | 6.2 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | $\%$ Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 26.1 | 72.3 | 1.6 |
|  | White wash/plastering | 33.5 | 64.8 | 1.7 |
|  | Repair of drinking water facility | 35.3 | 64.3 | 0.4 |
|  | Repair of toilet | 43.5 | 55.3 | 1.3 |
| Purchase | Mats, Tat patti etc. | 27.0 | 69.4 | 3.6 |
|  | Charts, globes or other teaching <br> material | 67.2 | 31.6 | 1.2 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
95.5

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 0.9 |
| ---: | :---: |
| Jan to June 2014 | 47.7 |
| July to Sept 2014 | 49.5 |
| After Sept 2014 | 1.8 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 86.8 |
| Average number of members present in last meeting | 11 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :--- | :--- |
| \% Schools which said they have <br> heard of CCE | 70.5 | 95.6 |

Of the schools which have heard of CCE, \% schools which have received materials/manuals

| For all teachers | 62.2 | 45.0 |
| :--- | :---: | :---: |
| For some teachers | 32.8 | 40.3 |
| For no teachers | 2.8 | 10.9 |
| Don't know | 2.3 | 3.8 |

| Age: 15-16 GIRLS | 66.2 | 10.1 | 0.0 | 23.8 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

| In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Govt. | Pvt. | Other |  |  |  |
| Age 3 | 83.6 | 4.8 |  |  | 11.7 | 100 |  |
| Age 4 | 84.5 | 9.6 |  |  | 5.9 | 100 |  |
| Age 5 | 32.4 | 7.2 | 44.5 | 11.7 | 0.0 | 4.1 | 100 |
| Age 6 | 6.4 | 3.0 | 74.5 | 14.0 | 0.0 | 2.2 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $13.7 \%$ in 2006, $9.9 \%$ in 2009, $6.4 \%$ in 2011 and $4.7 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 27.7 | 53.4 | 13.9 | 5.0 |  |  |  |  |  |  |  |  | 100 |
| \|| | 1.2 | 14.2 | 61.2 | 16.9 | 6.4 |  |  |  |  |  |  |  | 100 |
| III |  | 2.2 | 12.2 | 65.5 | 13.8 | 6.3 |  |  |  |  |  |  | 100 |
| IV | 3.3 |  |  | 14.7 | 61.0 | 17.5 | 3.5 |  |  |  |  |  | 100 |
| V | 3.6 |  |  |  | 7.3 | 65.9 | 15.9 | 5.3 | 2.0 |  |  |  | 100 |
| VI | 1.5 |  |  |  |  | 11.3 | 56.3 | 23.9 | 7.1 |  |  |  | 100 |
| VII | 2.0 |  |  |  |  |  | 8.2 | 65.9 | 17.7 | 6.2 |  |  | 100 |
| VIII | 3.0 |  |  |  |  |  |  | 13.0 | 64.3 | 15.6 | 4. | 0 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $65.5 \%$ children are 8 years old but there are also $12.2 \%$ who are $7,13.8 \%$ who are 9 and $6.3 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 86.2 | 94.9 | 86.8 | 75.8 | 90.9 | 76.5 |
| 2011 | 82.8 | 88.5 | 83.1 | 68.4 | 88.8 | 69.5 |
| 2012 | 75.1 | 96.1 | 76.7 | 60.7 | 95.3 | 62.9 |
| 2013 | 73.3 | 92.7 | 75.4 | 58.0 | 90.2 | 60.7 |
| 2014 | 82.4 | 96.2 | 84.1 | 66.8 | 92.4 | 69.3 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 31.2 | 37.5 | 14.6 | 7.2 | 9.5 | 100 |
| II | 15.9 | 30.0 | 20.2 | 11.9 | 21.9 | 100 |
| III | 8.8 | 21.9 | 22.5 | 13.4 | 33.4 | 100 |
| IV | 6.6 | 15.0 | 17.1 | 16.6 | 44.7 | 100 |
| V | 4.2 | 11.6 | 14.4 | 17.9 | 51.9 | 100 |
| VII | 2.4 | 8.1 | 9.9 | 15.8 | 64.0 | 100 |
| VII | 1.6 | 4.7 | 8.6 | 13.6 | 71.5 | 100 |
| VIII | 1.5 | 4.5 | 7.1 | 11.7 | 75.2 | 100 |
| Total | 9.1 | 16.8 | 14.4 | 13.6 | 46.1 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 8.8\% children cannot even read letters, $21.9 \%$ can read letters but not more, $22.5 \%$ can read words but not Std I level text or higher, 13.4\% can read Std I level text but not Std II level text, and $33.4 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 61.5 | 81.6 | 62.6 | 45.5 | 60.7 | 46.0 |
| 2011 | 57.2 | 78.0 | 58.0 | 38.4 | 61.3 | 39.1 |
| 2012 | 58.6 | 91.8 | 60.3 | 46.1 | 75.7 | 47.1 |
| 2013 | 56.8 | 88.6 | 58.9 | 43.6 | 76.3 | 44.9 |
| 2014 | 59.3 | 87.6 | 61.3 | 50.1 | 76.7 | 51.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level All schools 2014

| Std | Not even1-9 | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 33.6 | 41.0 | 19.1 | 5.4 | 0.9 | 100 |
| \\| | 14.9 | 37.2 | 28.6 | 15.8 | 3.6 | 100 |
| III | 8.6 | 28.1 | 35.2 | 21.3 | 6.9 | 100 |
| IV | 6.2 | 21.0 | 34.7 | 23.4 | 14.8 | 100 |
| V | 4.1 | 15.6 | 33.1 | 25.1 | 22.2 | 100 |
| VI | 2.7 | 11.3 | 27.6 | 28.1 | 30.3 | 100 |
| VII | 1.4 | 7.6 | 28.9 | 26.0 | 36.2 | 100 |
| VIII | 1.6 | 6.3 | 28.8 | 25.6 | 37.8 | 100 |
| Total | 9.2 | 21.2 | 29.6 | 21.3 | 18.8 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 8.6\% children cannot even recognize numbers 1-9, $28.1 \%$ can recognize numbers up to 9 but not more, $35.2 \%$ can recognize numbers up to 99 but cannot do subtraction, $21.3 \%$ can do subtraction but cannot do division, and $6.9 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 84.2 | 94.6 | 84.9 | 71.2 | 89.6 | 71.9 |
| 2011 | 81.4 | 89.1 | 81.9 | 61.5 | 89.5 | 62.9 |
| 2012 | 74.6 | 95.4 | 76.2 | 52.4 | 92.8 | 55.0 |
| 2013 | 75.7 | 93.4 | 77.6 | 56.2 | 85.1 | 58.7 |
| 2014 | 83.6 | 95.7 | 85.1 | 60.2 | 92.5 | 63.4 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time

| :---: | :---: | :---: | :---: |

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 54.0 | 19.9 | 13.7 | 9.9 | 2.5 | 100 |
| II | 38.6 | 18.1 | 22.8 | 15.1 | 5.3 | 100 |
| III | 23.7 | 19.9 | 26.3 | 22.1 | 8.0 | 100 |
| IV | 16.4 | 15.9 | 26.7 | 26.0 | 15.0 | 100 |
| V | 11.7 | 11.7 | 24.0 | 29.7 | 22.9 | 100 |
| VI | 7.0 | 10.6 | 21.0 | 28.6 | 32.9 | 100 |
| VII | 5.0 | 6.4 | 19.2 | 29.8 | 39.7 | 100 |
| VIII | 4.8 | 5.6 | 17.2 | 26.6 | 45.7 | 100 |
| Total | 20.3 | 13.6 | 21.5 | 23.5 | 21.1 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 23.7\% children cannot even read capital letters, $19.9 \%$ can read capital letters but not more, $26.3 \%$ can read small letters but not words or higher, $22.1 \%$ can read words but not sentences, and $8 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 68.0 |  |
| II | 62.1 | 54.0 |
| III | 67.9 | 52.4 |
| IV | 58.9 | 55.3 |
| V | 55.8 | 56.0 |
| VI | 63.8 | 61.7 |
| VII | 68.2 | 62.6 |
| VIII | 64.2 | 58.1 |

English Tool

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Std | Category | 2011 | 2012 | 2013 | 2014 |
| Std I-V | Govt. no tuition | 55.6 | 53.7 | 48.8 | 49.0 |
|  | Govt. + Tuition | 39.3 | 39.2 | 42.0 | 40.2 |
|  | Pvt. no tuition | 1.9 | 2.4 | 2.9 | 3.3 |
|  | Pvt. + Tuition | 3.2 | 4.8 | 6.3 | 7.6 |
|  | Total | 100 | 100 | 100 | 100 |
| Std VI-VIII | Govt. no tuition | 47.0 | 49.4 | 44.5 | 46.4 |
|  | Govt. + Tuition | 48.9 | 46.0 | 50.5 | 48.1 |

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 30 OUT OF 30 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Primary schools <br> (Std I-IVN) | 383 | 390 | 419 | 411 | 370 |

| TLM grant | 739 | 58.2 | 34.4 | 7.4 | 748 | 8.0 | 86.8 | 5.2 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 28.1 | 70.2 | 1.8 |
|  | White wash/plastering | 45.2 | 53.6 | 1.3 |
|  | Repair of drinking water facility | 37.0 | 61.6 | 1.4 |
|  | Repair of toilet | 35.1 | 63.5 | 1.4 |
| Purchase | Mats, Tat patti etc. | 51.0 | 48.0 | 1.0 |
|  | Charts, globes or other teaching <br> material | 56.0 | 43.1 | 0.9 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
89.6

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 1.2 |
| ---: | :---: |
| Jan to June 2014 | 3.5 |
| July to Sept 2014 | 62.2 |
| After Sept 2014 | 33.1 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 92.3 |
| Average number of members present in last meeting | 17 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| Age: 11-14 ALL | 55.2 | 42.6 | 0.1 | 2.2 | 100 |
| Age: 11-14 BOYS | 51.5 | 46.7 | 0.1 | 1.7 | 100 |
| Age: 11-14 GIRLS | 59.8 | 37.3 | 0.1 | 2.8 | 100 |
| Age: 15-16 ALL | 52.3 | 40.2 | 0.1 | 7.4 | 100 |
| Age: 15-16 BOYS | 52.1 | 41.8 | 0.1 | 6.0 | 100 |
| Age: 15-16 GIRLS | 52.6 | 38.1 | 0.2 | 9.1 | 100 |

Note: 'Other' includes children going to madarsa and EGS.
'Not in school' = dropped out + never enrolled

## Chart 2: Trends over time

\% Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

## Young children in pre-school and school

Table 3: \% Children age 3-6 who are enrolled in different types of pre-school and school 2014

|  | In balwadi <br> or <br> anganwadi | In LKG/ <br> UKG | In school |  |  |  | Not in <br> school <br> or pre- <br> school |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $5 \%$ in 2006, $6.2 \%$ in 2009, 2.6\% in 2011 and $2.8 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 24.6 | 33.3 | 30.6 | 8.7 | 2.7 |  |  |  |  |  |  |  | 100 |
| \|| | 4.5 | 16.2 | 36.1 | 31.0 | 9.1 | 3.2 |  |  |  |  |  |  | 100 |
| III |  | 1 | 18.6 | 32.9 | 31.6 | 11.9 | 1.9 |  |  |  |  |  | 100 |
| IV | 4.5 |  |  | 20.0 | 34.6 | 28.8 | 8.2 | 3.9 |  |  |  |  | 100 |
| V | 4.7 |  |  |  | 13.0 | 41.4 | 26.8 | 10.7 | 3.4 |  |  |  | 100 |
| VI | 2.9 |  |  |  |  | 17.9 | 32.0 | 31.0 | 11.9 | 4.3 |  |  | 100 |
| VII | 4.6 |  |  |  |  |  | 12.8 | 40.0 | 27.1 | 11.7 | 3.9 |  | 100 |
| VIII | 3.3 |  |  |  |  |  |  | 18.0 | 34.9 | 33.4 | 7.9 | 2.6 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $32.9 \%$ children are 8 years old but there are also $18.6 \%$ who are $7,31.6 \%$ who are $9,11.9 \%$ who are 10 and $1.9 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 26.7 | 36.6 | 23.3 | 6.5 | 7.0 | 100 |
| II | 13.2 | 29.9 | 26.0 | 13.2 | 17.8 | 100 |
| III | 7.4 | 17.4 | 21.6 | 20.0 | 33.6 | 100 |
| IV | 3.9 | 11.5 | 10.1 | 17.4 | 57.1 | 100 |
| V | 3.0 | 6.2 | 9.5 | 14.7 | 66.5 | 100 |
| VI | 2.2 | 4.6 | 5.6 | 12.6 | 75.0 | 100 |
| VII | 1.6 | 3.7 | 4.8 | 10.6 | 79.4 | 100 |

All schools 2010, 2012 and 2014

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can read at least Std I level text |  |  | \% Children in Std $V$ who can read Std II level text |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt. * |
| 2010 | 77.4 | 79.6 | 78.2 | 68.7 | 71.9 | 69.7 |
| 2011 | 79.4 | 82.8 | 80.7 | 71.9 | 71.9 | 71.9 |
| 2012 | 71.4 | 81.5 | 75.5 | 69.5 | 73.5 | 71.2 |
| 2013 | 68.8 | 77.0 | 72.4 | 66.5 | 69.9 | 67.8 |
| 2014 | 67.8 | 81.2 | 74.5 | 60.9 | 73.8 | 66.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level All schools 2014

| Std | Not even 1-9 | Recognize numbers |  | $\begin{gathered} \text { Can } \\ \text { subtract } \end{gathered}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 17.4 | 29.5 | 43.2 | 9.6 | 0.4 | 100 |
| II | 6.3 | 28.7 | 36.9 | 26.9 | 1.2 | 100 |
| III | 3.1 | 19.0 | 30.4 | 36.6 | 11.0 | 100 |
| IV | 1.7 | 10.5 | 24.7 | 31.6 | 31.6 | 100 |
| V | 1.0 | 8.0 | 22.0 | 24.7 | 44.4 | 100 |
| VI | 0.8 | 3.6 | 22.4 | 22.6 | 50.8 | 100 |
| VII | 0.9 | 2.8 | 21.4 | 20.4 | 54.5 | 100 |
| VIII | 0.6 | 1.1 | 18.1 | 18.5 | 61.8 | 100 |
| Total | 3.9 | 12.6 | 27.2 | 23.9 | 32.4 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 3.1\% children cannot even recognize numbers 1-9, 19\% can recognize numbers up to 9 but not more, $30.4 \%$ can recognize numbers up to 99 but cannot do subtraction, $36.6 \%$ can do subtraction but cannot do division, and $11 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 95.9 | 96.9 | 96.3 | 87.3 | 88.0 | 87.6 |
| 2011 | 96.9 | 97.6 | 97.2 | 84.4 | 90.7 | 86.8 |
| 2012 | 91.9 | 97.2 | 94.5 | 71.2 | 91.3 | 80.6 |
| 2013 | 89.5 | 97.5 | 93.7 | 69.2 | 93.1 | 81.0 |
| 2014 | 89.6 | 96.7 | 93.7 | 57.6 | 94.9 | 78.0 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std V who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt. * |
| 2010 | 80.8 | 82.5 | 81.4 | 70.8 | 68.0 | 69.9 |
| 2011 | 74.6 | 79.7 | 76.5 | 62.5 | 59.0 | 61.3 |
| 2012 | 55.6 | 74.4 | 63.2 | 48.6 | 56.5 | 52.0 |
| 2013 | 57.7 | 76.9 | 66.3 | 47.1 | 53.7 | 49.7 |
| 2014 | 48.3 | 78.1 | 63.2 | 37.1 | 53.9 | 44.4 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Punjab rural

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 23.7 | 15.2 | 23.0 | 28.0 | 10.1 | 100 |
| II | 11.3 | 15.9 | 23.2 | 27.8 | 21.7 | 100 |
| III | 8.3 | 10.1 | 21.2 | 28.8 | 31.6 | 100 |
| IV | 4.6 | 5.2 | 17.1 | 30.6 | 42.5 | 100 |
| V | 3.6 | 6.4 | 14.1 | 25.1 | 50.8 | 100 |
| VI | 2.5 | 4.7 | 9.5 | 25.2 | 58.1 | 100 |
| VII | 2.3 | 3.4 | 9.0 | 18.7 | 66.7 | 100 |
| VIII | 1.4 | 2.3 | 6.7 | 18.5 | 71.0 | 100 |
| Total | 7.1 | 7.8 | 15.4 | 25.4 | 44.4 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, $8.3 \%$ children cannot even read capital letters, $10.1 \%$ can read capital letters but not more, $21.2 \%$ can read small letters but not words or higher, $28.8 \%$ can read words but not sentences, and $31.6 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 59.5 |  |
| III | 54.2 | 62.0 |
| III | 52.9 | 65.4 |
| IV | 65.5 | 65.9 |
| V | 56.1 | 70.1 |
| VI | 62.9 | 77.4 |
| VII | 58.7 | 77.9 |
| VIII | 67.5 | 69.8 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Development grant | 476 | 70.6 | 23.5 | 5.9 | 448 | 15.2 | 80.6 | 4.2 |
| TLM grant | 480 | 69.8 | 25.2 | 5.0 | 440 | 4.3 | 91.8 | 3.9 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 6.2 | 93.2 | 0.6 |
|  | White wash/plastering | 34.3 | 64.9 | 0.9 |
|  | Repair of drinking water facility | 47.4 | 51.8 | 0.8 |
|  | Repair of toilet | 38.1 | 61.1 | 0.9 |
| Purchase | Mats, Tat patti etc. | 35.1 | 62.7 | 2.1 |
|  | Charts, globes or other teaching <br> material | 53.4 | 44.8 | 1.9 |

## Table 22: School Management Committee (SMC) in schools 2014

\% Schools which said they have an SMC
96.9

Of the schools that have SMC, \% schools that had the last SMC meeting

| Before Jan 2014 | 0.2 |
| ---: | :---: |
| Jan to June 2014 | 4.4 |
| July to Sept 2014 | 85.0 |
| After Sept 2014 | 10.4 |
| \% Schools that could give information about how many <br> members were present in the last meeting | 93.9 |
| Average number of members present in last meeting | 11 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 87.1 | 84.8 |
| Of the schools which have heard of CCE, \% schools which <br> have received materials/manuals |  |  |
| For all teachers | 54.4 | 72.9 |
| For some teachers | 36.0 | 13.2 |
| For no teachers | 7.8 | 11.7 |
| Don't know | 1.9 | 2.2 |

|  | In balwadi or anganwadi | In LKG/ <br> UKG | In school |  |  | Not in school or preschool | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Govt. | Pvt. | Other |  |  |
| Age 3 | 23.0 | 14.2 |  |  |  | 62.7 | 100 |
| Age 4 | 19.8 | 29.0 |  |  |  | 51.2 | 100 |
| Age 5 | 6.5 | 19.9 | 33.7 | 26.9 | 0.6 | 12.5 | 100 |
| Age 6 | 1.7 | 9.3 | 46.8 | 34.8 | 0.4 | 7.1 | 100 |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $19.6 \%$ in 2006, 12.2\% in 2009, $8.9 \%$ in 2011 and $12.1 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 35.8 | 31.9 | 18.0 | 9.6 | 4.6 |  |  |  |  |  |  |  | 100 |
| \|| | 11.4 | 22.2 | 31.0 | 22.3 | 6.3 | 6.8 |  |  |  |  |  |  | 100 |
| III | 2.2 | 8.6 | 22.3 | 34.3 | 14.4 | 11.1 | 7.0 |  |  |  |  |  | 100 |
| IV |  | 6 | 10.7 | 22.7 | 24.7 | 24.3 | 7.0 | 5.5 | 2.5 |  |  |  | 100 |
| V | 3.1 |  |  | 12.7 | 16.5 | 35.5 | 15.0 | 11.0 | 6.2 |  |  |  | 100 |
| VI | 4.3 |  |  |  | 6.9 | 24.2 | 24.8 | 24.7 | 9.3 | 5.8 |  |  | 100 |
| VII | 2.5 |  |  |  |  | 9.8 | 16.4 | 36.0 | 21.3 | 9.1 | 5.0 |  | 100 |
| VIII | 3.6 |  |  |  |  |  | 6.5 | 24.1 | 28.8 | 23.5 | 10.2 | 3.4 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $34.3 \%$ children are 8 years old but there are also $22.3 \%$ who are $7,14.4 \%$ who are $9,11.1 \%$ who are 10 and $7 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 60.7 | 27.4 | 6.1 | 2.8 | 3.0 | 100 |
| II | 31.2 | 38.5 | 15.0 | 6.6 | 8.6 | 100 |
| III | 15.3 | 28.9 | 18.2 | 16.4 | 21.2 | 100 |
| IV | 8.0 | 17.5 | 13.2 | 19.1 | 42.3 | 100 |
| V | 5.4 | 14.6 | 13.2 | 20.2 | 46.7 | 100 |
| VI | 2.7 | 7.6 | 7.5 | 16.0 | 66.2 | 100 |
| VII | 1.6 | 4.8 | 5.9 | 14.8 | 73.0 | 100 |
| VIII | 0.9 | 3.7 | 3.9 | 11.0 | 80.5 | 100 |
| Total | 16.5 | 18.4 | 10.5 | 13.3 | 41.3 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $15.3 \%$ children cannot even read letters, $28.9 \%$ can read letters but not more, $18.2 \%$ can read words but not Std I level text or higher, 16.4\% can read Std I level text but not Std II level text, and $21.2 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Reading Tool

सावन का महीना था। आसमान में बहुत काले-काले बादल छाए थे। ठंडी-ठंडी हवा चल रही थी। मुझे झूला झूलने का मन किया। बड़े भैया एक मोटी सी रस्सी लेकर बाहर आए। भैया ने रस्सी को पेड़ से लटकाकर झूला बनाया। सब ने मिलकर खूब झूला झूला। बाकी बच्चे भी आकर मज़े से झूलने लगे। झूलते-झूलते रात हो गई।

बग़ीचे में एक पेड़ है। पेड़ पर एक तोता रहता है। तोते का रंग हरा है। वह लाल टमाटर खाता है।

Table 5: Trends over time
\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 80.5 | 93.8 | 85.5 | 63.2 | 80.7 | 69.5 |
| 2011 | 72.8 | 92.2 | 80.3 | 53.5 | 80.4 | 63.2 |
| 2012 | 59.7 | 88.0 | 73.2 | 34.2 | 72.9 | 50.2 |
| 2013 | 56.7 | 85.6 | 70.0 | 42.2 | 75.7 | 56.8 |
| 2014 | 56.2 | 81.5 | 68.8 | 39.3 | 74.9 | 55.6 |

* This is the weighted average for children in government and private schools only.

Chart 4: Trends over time
\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can read at least Std I level text |  |  | \% Children in Std $V$ who can read Std II level text |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt. * | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 52.2 | 76.0 | 60.6 | 44.2 | 64.5 | 51.0 |
| 2011 | 47.1 | 73.4 | 56.4 | 33.9 | 59.1 | 42.8 |
| 2012 | 33.4 | 70.4 | 49.3 | 33.3 | 65.0 | 46.8 |
| 2013 | 39.0 | 74.8 | 53.6 | 35.8 | 68.3 | 49.2 |
| 2014 | 45.6 | 78.5 | 61.5 | 34.4 | 65.4 | 46.6 |

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even1-9 | Recognize numbers |  | Can subtract | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| 1 | 55.6 | 29.6 | 12.2 | 1.9 | 0.6 | 100 |
| II | 24.2 | 43.8 | 24.5 | 6.2 | 1.4 | 100 |
| III | 10.8 | 36.8 | 30.9 | 15.3 | 6.2 | 100 |
| IV | 4.8 | 24.5 | 30.3 | 24.1 | 16.5 | 100 |
| V | 4.0 | 19.6 | 30.5 | 22.3 | 23.6 | 100 |
| VI | 1.8 | 11.6 | 26.6 | 23.5 | 36.5 | 100 |
| VII | 1.0 | 7.7 | 25.7 | 23.2 | 42.3 | 100 |
| VIII | 0.7 | 5.6 | 22.5 | 22.9 | 48.3 | 100 |
| Total | 13.6 | 23.0 | 25.4 | 17.1 | 21.0 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $10.8 \%$ children cannot even recognize numbers 1-9, $36.8 \%$ can recognize numbers up to 9 but not more, $30.9 \%$ can recognize numbers up to 99 but cannot do subtraction, $15.3 \%$ can do subtraction but cannot do division, and $6.2 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 82.3 | 93.1 | 86.4 | 58.1 | 80.0 | 66.0 |
| 2011 | 74.8 | 91.7 | 81.3 | 46.4 | 74.0 | 56.4 |
| 2012 | 68.3 | 92.3 | 79.7 | 31.9 | 72.5 | 48.7 |
| 2013 | 67.9 | 88.9 | 77.6 | 38.0 | 75.0 | 54.1 |
| 2014 | 65.8 | 86.0 | 75.9 | 35.0 | 72.7 | 52.3 |

* This is the weighted average for children in government and private schools only.

Chart 5: Trends over time
\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

Table 9: Trends over time
\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can do at least subtraction |  |  | \% Children in Std V who can do division |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. | Govt. \& Pvt.* | Govt. | Pvt. | Govt. \& Pvt. * |
| 2010 | 41.5 | 70.3 | 51.7 | 25.2 | 47.8 | 32.7 |
| 2011 | 31.7 | 62.0 | 42.4 | 15.0 | 39.6 | 23.8 |
| 2012 | 19.9 | 54.6 | 34.9 | 9.9 | 36.4 | 21.2 |
| 2013 | 22.1 | 60.1 | 37.6 | 15.2 | 45.1 | 27.5 |
| 2014 | 22.4 | 60.1 | 40.6 | 12.0 | 41.3 | 23.6 |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Rajasthan rural

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 67.6 | 13.8 | 12.7 | 4.6 | 1.5 | 100 |
| II | 42.3 | 23.2 | 24.0 | 6.9 | 3.6 | 100 |
| III | 26.7 | 22.2 | 31.2 | 14.8 | 5.2 | 100 |
| IV | 15.1 | 17.4 | 32.0 | 24.8 | 10.7 | 100 |
| V | 12.6 | 16.4 | 29.0 | 26.7 | 15.2 | 100 |
| VI | 6.3 | 9.8 | 26.7 | 31.7 | 25.6 | 100 |
| VII | 4.1 | 7.7 | 23.2 | 32.4 | 32.6 | 100 |
| VIII | 2.6 | 5.8 | 19.6 | 29.3 | 42.6 | 100 |
| Total | 23.1 | 14.8 | 24.8 | 21.0 | 16.4 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, $26.7 \%$ children cannot even read capital letters, $22.2 \%$ can read capital letters but not more, $31.2 \%$ can read small letters but not words or higher, $14.8 \%$ can read words but not sentences, and $5.2 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 54.7 |  |
| II | 48.4 | 46.0 |
| III | 54.1 | 49.8 |
| IV | 56.2 | 50.7 |
| V | 61.2 | 48.9 |
| VI | 57.7 | 56.1 |
| VII | 60.5 | 57.8 |
| VIII | 59.5 | 53.2 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Std | Category | 2011 | 2012 | 2013 | 2014 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Std I-V | Govt. no tuition | 61.3 | 54.4 | 54.1 | 52.2 |
|  | Govt. + Tuition | 0.8 | 1.3 | 1.9 | 1.4 |
|  | Pvt. no tuition | 34.8 | 41.1 | 40.5 | 41.8 |
|  | Pvt. + Tuition | 3.1 | 3.3 | 3.5 | 4.6 |
|  | Total | 100 | 100 | 100 | 100 |
| Std VI-VIII | Govt. no tuition | 64.3 | 58.4 | 59.9 | 57.3 |
|  | Govt. + Tuition | 1.9 | 1.9 | 2.3 | 2.3 |
|  | Pvt. no tuition | 30.7 | 36.3 | 34.6 | 36.3 |
|  | Pvt. + Tuition | 3.2 | 3.4 | 3.2 | 4.1 |
|  | Total | 100 | 100 | 100 | 100 |

| TLM grant | 824 | 24.4 | 70.6 | 5.0 | 882 | 3.4 | 91.7 | 4.9 |

Note for Table 18 \& 19: Grant information was not collected in ASER 2013.

Table 20: \% Schools carrying out different activities since April 2013

| Type of activity | \% Schools |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Yes | No | Don't <br> know |  |
| Construction | New classroom built | 8.2 | 91.4 | 0.5 |
|  | White wash/plastering | 33.4 | 66.2 | 0.5 |
|  | Repair of drinking water facility | 32.1 | 67.5 | 0.5 |
|  | Repair of toilet | 26.2 | 73.4 | 0.5 |
| Purchase | Mats, Tat patti etc. | 31.2 | 68.0 | 0.8 |
|  | Charts, globes or other teaching <br> material | 42.6 | 56.6 | 0.8 |

## Table 22: School Management Committee (SMC) in schools 2014

| \% Schools which said they have an SMC | 97.9 |  |
| :--- | :---: | :---: |
| Of the schools that have SMC, \% schools that had the last SMC meeting |  |  |
|  | Before Jan 2014 | 0.6 |
| Jan to June 2014 | 1.7 |  |
| July to Sept 2014 | 93.2 |  |
| After Sept 2014 | 4.5 |  |
| \% Schools that could give information about how many <br> members were present in the last meeting | 97.6 |  |
| Average number of members present in last meeting | 12 |  |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Table 21: Continuous and Comprehensive Evaluation (CCE) in schools 2013-2014

| CCE in schools | 2013 | 2014 |
| :--- | :---: | :---: |
| \% Schools which said they have <br> heard of CCE | 61.6 | 72.8 |

|  | 34.6 | 34.2 |  |  | 31.3 | 100 |  |  |  |  |  |  |
| Age 4 | 31.0 | 67.9 |  |  | 1.1 | 100 |  |  |  |  |  |  |
| Age 5 | 1.8 | 9.9 | 29.1 | 58.4 | 0.0 | 0.7 | 100 |  |  |  |  |  |
| Age 6 | 0.5 | 1.9 | 44.1 | 52.2 | 0.0 | 1.4 | 100 |  |  |  |  |  |

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time \% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $1.8 \%$ in 2007, $2.4 \%$ in 2009, $0.9 \%$ in 2011 and $0.6 \%$ in 2014.

Table 2: Sample description
\% Children in each class by age 2014

| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 19.2 | 45.1 | 25.4 | 5.2 | 5.2 |  |  |  |  |  |  |  | 100 |
| \|| | 5.7 | 12.8 | 38.4 | 32.4 | 7.7 | 3.1 |  |  |  |  |  |  | 100 |
| III |  | 9 | 10.1 | 32.3 | 34.0 | 11.5 | 8.2 |  |  |  |  |  | 100 |
| IV | 1.1 |  |  | 14.9 | 26.9 | 25.8 | 17.0 | 10.0 | 4.5 |  |  |  | 100 |
| V | 4.1 |  |  |  | 8.3 | 34.7 | 24.6 | 19.2 | 6.8 | 2.5 |  |  | 100 |
| VI | 6.3 |  |  |  |  |  | 22.3 | 37.9 | 19.8 | 10.2 | 3.5 |  | 100 |
| VII | 1.0 |  |  |  |  |  | 5.3 | 21.6 | 26.3 | 28.6 | 11.2 | 6.1 | 100 |
| VIII | 3.6 |  |  |  |  |  |  | 7.9 | 23.7 | 33.3 | 17.8 | 13.7 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $32.3 \%$ children are 8 years old but there are also $10.1 \%$ who are $7,34 \%$ who are 9 , $11.5 \%$ who are 10 and $8.2 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2007-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 16.0 | 28.7 | 44.4 | 7.3 | 3.6 | 100 |
| II | 4.1 | 23.3 | 43.5 | 19.9 | 9.2 | 100 |
| III | 1.7 | 10.3 | 39.7 | 34.1 | 14.3 | 100 |
| IV | 0.0 | 6.6 | 22.7 | 34.8 | 35.9 | 100 |
| V | 0.4 | 3.0 | 16.7 | 36.5 | 43.4 | 100 |
| VI | 0.0 | 0.6 | 8.2 | 31.0 | 60.1 | 100 |
| VII | 0.0 | 0.0 | 4.0 | 13.0 | 83.1 | 100 |
| VIII | 0.0 | 1.1 | 3.6 | 4.0 | 91.3 | 100 |
| Total | 2.5 | 8.9 | 22.9 | 23.6 | 42.0 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 1.7\% children cannot even read letters, $10.3 \%$ can read letters but not more, $39.7 \%$ can read words but not Std I level text or higher, 34.1\% can read Std I level text but not Std II level text, and $14.3 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

| 2013 |  |  | 75.5 |  |  | 48.0 |
| 2014 |  |  | 70.7 |  |  | 43.4 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Facilitated by PRATHAM
Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level All schools 2014

| Std | Not even1-9 | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 9.5 | 17.4 | 62.5 | 9.0 | 1.7 | 100 |
| \\| | 2.9 | 10.1 | 59.9 | 24.6 | 2.5 | 100 |
| III | 1.0 | 8.2 | 48.3 | 36.7 | 5.9 | 100 |
| IV | 0.0 | 1.6 | 34.5 | 45.6 | 18.4 | 100 |
| V | 0.0 | 1.4 | 20.3 | 45.0 | 33.3 | 100 |
| VI | 0.5 | 0.4 | 19.3 | 41.5 | 38.3 | 100 |
| VII | 0.0 | 0.0 | 10.7 | 34.1 | 55.2 | 100 |
| VIII | 0.0 | 0.6 | 4.7 | 31.7 | 63.1 | 100 |
| Total | 1.6 | 4.8 | 32.5 | 34.3 | 26.9 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $1 \%$ children cannot even recognize numbers 1-9, 8.2\% can recognize numbers up to 9 but not more, $48.3 \%$ can recognize numbers up to 99 but cannot do subtraction, $36.7 \%$ can do subtraction but cannot do division, and $5.9 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |

| 2012 | insufficient | 78.1 | insufficient | 43.8 |  |  |
| 2013 |  |  | 75.6 |  |  | 33.3 |
| 2014 |  |  | 64.0 |  |  | 33.3 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std V in 2010, 2012 and 2014.

## Sikkim rubal

Data has not been presented where sample size was insufficient.

| VIII |  | 95.6 |
| Total | 69.6 | 87.0 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

| Table 12: Trends over time \% Children in Std I-V and Std VI-VIII by school type and TUITION 2011-2014 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Sikkim furat

## ANALYSIS BASED ON DATA FROM GOVERNMENT SCHOOLS. 4 OUT OF 4 DISTRICTS

Data has not been presented where sample size was insufficient.

## School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 14: Number of schools visited 2010-2014

| Type of school | 2010 | 2011 | 2012 | 2013 | 2014 |

ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $3.9 \%$ in 2006, 1.1\% in 2009, 1.3\% in 2011 and $1.4 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| I | 36.1 | 52.8 | 8.7 | 2.4 |  |  |  |  |  |  |  |  | 100 |
| \|| | 1.2 | 21.4 | 64.0 | 11.8 | 1.6 |  |  |  |  |  |  |  | 100 |
| III |  | 6 | 20.2 | 67.2 | 10.2 | 1.8 |  |  |  |  |  |  | 100 |
| IV | 1.7 |  |  | 18.2 | 66.2 | 12.3 | 1.6 |  |  |  |  |  | 100 |
| V | 1.6 |  |  |  | 10.3 | 74.3 | 11.1 | 2.7 |  |  |  |  | 100 |
| VI | 1.2 |  |  |  |  | 11.9 | 66.4 | 17.8 | 2.7 |  |  |  | 100 |
| VII | 2.1 |  |  |  |  |  | 12.0 | 66.3 | 16.7 | 3.0 |  |  | 100 |
| VIII | 2.1 |  |  |  |  |  |  | 14.6 | 69.5 | 11.2 | 2.6 |  | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $67.2 \%$ children are 8 years old but there are also $20.2 \%$ who are $7,10.2 \%$ who are 9 and $1.8 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 50.6 | 33.9 | 12.2 | 2.2 | 1.2 | 100 |
| II | 21.2 | 29.1 | 32.9 | 11.8 | 4.9 | 100 |
| III | 11.1 | 18.2 | 32.8 | 22.0 | 15.9 | 100 |
| IV | 5.3 | 9.8 | 26.9 | 28.7 | 29.4 | 100 |
| V | 3.8 | 5.7 | 19.8 | 24.0 | 46.9 | 100 |
| VI | 1.5 | 3.5 | 15.3 | 23.8 | 56.0 | 100 |
| VII | 1.7 | 2.5 | 10.1 | 21.3 | 64.4 | 100 |
| VIII | 1.1 | 2.1 | 8.4 | 19.0 | 69.3 | 100 |
| Total | 11.9 | 12.9 | 19.6 | 19.2 | 36.5 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 11.1\% children cannot even read letters, 18.2\% can read letters but not more, $32.8 \%$ can read words but not Std I level text or higher, $22 \%$ can read Std I level text but not Std II level text, and $15.9 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Table 5: Trends over time

\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 74.5 | 85.1 | 78.1 | 67.5 | 73.7 | 69.3 |
| 2011 | 78.2 | 83.1 | 80.0 | 67.7 | 70.3 | 68.6 |
| 2012 | 74.1 | 77.4 | 75.4 | 68.6 | 72.0 | 69.8 |
| 2013 | 76.2 | 81.4 | 78.0 | 71.3 | 65.9 | 69.7 |
| 2014 | 78.5 | 79.1 | 78.8 | 72.3 | 68.1 | 70.7 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 53.3 | 62.2 | 55.3 | 30.9 | 29.3 | 30.5 |
| 2011 | 49.1 | 54.2 | 50.6 | 31.8 | 34.0 | 32.3 |
| 2012 | 47.6 | 51.8 | 49.0 | 30.2 | 30.6 | 30.3 |
| 2013 | 54.0 | 48.1 | 52.3 | 33.8 | 26.3 | 31.9 |
| 2014 | 59.3 | 55.6 | 58.0 | 49.9 | 40.2 | 46.9 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even <br> $1-9$ | Recognize numbers |  | Can <br>  <br>  <br> subtract | Can <br> divide | Total |

| VI | 0.6 | 1.9 | 29.7 | 32.0 | 35.8 | 100 |
| VII | 0.5 | 1.4 | 30.1 | 30.0 | 38.0 | 100 |
| VIII | 0.2 | 1.7 | 26.4 | 29.7 | 42.0 | 100 |
| Total | 7.0 | 11.6 | 36.8 | 25.3 | 19.4 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $5.5 \%$ children cannot even recognize numbers 1-9, $14.3 \%$ can recognize numbers up to 9 but not more, $56 \%$ can recognize numbers up to 99 but cannot do subtraction, $22.9 \%$ can do subtraction but cannot do division, and $1.5 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |

| 2011 | 82.1 | 88.4 | 84.5 | 70.7 | 79.4 | 73.8 |
| 2012 | 79.9 | 89.1 | 83.5 | 71.6 | 84.4 | 76.1 |
| 2013 | 83.3 | 88.3 | 85.1 | 78.3 | 82.7 | 79.6 |
| 2014 | 86.3 | 93.3 | 89.1 | 75.9 | 87.9 | 80.3 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

## Table 9: Trends over time

\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

Table 12: Trends over time
\% Children in Std I-V and Std VI-VIII by school type and

| VIII | 5.3 |  |  |  |  |  |  |  | 9.7 | 71.0 | 10.1 | 4.0 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $20.2 \%$ children are 8 years old but there are also $3.1 \%$ who are younger, $61.1 \%$ who are $9,12.2 \%$ who are 10 and $3.4 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 19.7 | 33.7 | 25.2 | 11.5 | 10.0 | 100 |
| II | 6.4 | 21.9 | 36.4 | 21.1 | 14.3 | 100 |
| III | 3.4 | 20.5 | 25.7 | 26.1 | 24.2 | 100 |
| IV | 1.5 | 6.9 | 26.8 | 25.9 | 38.9 | 100 |
| V | 2.5 | 7.8 | 18.6 | 25.7 | 45.3 | 100 |
| VI | 1.4 | 5.7 | 18.4 | 22.4 | 52.0 | 100 |
| VII | 2.0 | 5.6 | 10.1 | 17.0 | 65.3 | 100 |
| VIII | 1.5 | 1.6 | 5.3 | 17.9 | 73.8 | 100 |
| Total | 5.8 | 14.7 | 21.7 | 20.6 | 37.3 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 3.4\% children cannot even read letters, 20.5\% can read letters but not more, $25.7 \%$ can read words but not Std I level text or higher, $26.1 \%$ can read Std I level text but not Std II level text, and $24.2 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Table 5: Trends over time

\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 97.6 |  | 97.7 | 85.1 |  | 85.3 |

* This is the weighted average for children in government and private schools only.
\end{tabular}

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even <br> $1-9$ | Recognize numbers |  | Can <br> subtract | Can <br> divide | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 42.3 | 34.2 | 9.3 | 0.1 | 100 |
| II | 4.8 | 27.0 | 47.6 | 18.7 | 2.0 | 100 |
| IIII | 1.9 | 19.5 | 40.6 | 33.3 | 4.8 | 100 |
| IV | 0.5 | 8.6 | 36.7 | 37.3 | 16.9 | 100 |
| V | 1.5 | 8.6 | 32.0 | 35.6 | 22.4 | 100 |
| VI | 1.0 | 7.1 | 23.7 | 39.3 | 28.8 | 100 |
| VII | 0.4 | 2.0 | 27.9 | 31.1 | 38.6 | 100 |
| VIII | 0.2 | 3.1 | 21.1 | 29.9 | 45.7 | 100 |
| Total | 3.8 | 16.9 | 33.6 | 28.0 | 17.7 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 1.9\% children cannot even recognize numbers 1-9, $19.5 \%$ can recognize numbers up to 9 but not more, $40.6 \%$ can recognize numbers up to 99 but cannot do subtraction, $33.3 \%$ can do subtraction but cannot do division, and $4.8 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |

| 2010 | 66.8 |  | 67.6 | 35.3 |  | 36.0 |
| 2011 | 73.3 |  | 73.5 | 37.8 |  | 37.8 |
| 2012 | 51.9 |  | 52.8 | 20.5 |  | 20.8 |
| 2013 | 39.5 |  | 41.7 | 26.1 |  | 26.4 |
| 2014 | 52.8 |  | 54.4 | 20.8 |  | 22.6 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

Table 12: Trends over time

| \% Schools that could give information Sept 2014 <br> members were present in the last meeting | 6.3 |
| Average number of members present in last meeting many | 93.0 |

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.

Note: For 3 and 4 year old children, only pre-school status is recorded.
ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $3.4 \%$ in 2006, 3\% in 2009, 1.2\% in 2011 and $1.7 \%$ in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 20.9 | 39.5 | 26.2 | 9.1 | 4.3 |  |  |  |  |  |  |  | 100 |
| \\| | 4.7 | 16.4 | 39.2 | 26.2 | 7.8 | 5.8 |  |  |  |  |  |  | 100 |
| III | 5.1 |  | 17.7 | 34.6 | 27.4 | 10.5 | 4.7 |  |  |  |  |  | 100 |
| IV | 5.0 |  |  | 14.3 | 31.6 | 31.1 | 11.2 | 5.4 | 1.5 |  |  |  | 100 |
| V | 5.2 |  |  |  | 12.4 | 39.1 | 24.1 | 14.5 | 4.6 |  |  |  | 100 |
| VI | 4.3 |  |  |  |  | 16.5 | 29.8 | 32.4 | 11.2 | 5.8 |  |  | 100 |
| VII | 4.5 |  |  |  |  |  | 13.6 | 41.7 | 25.6 | 11.0 | 3.6 |  | 100 |
| VIII | 4.8 |  |  |  |  |  |  | 18.4 | 36.7 | 26.7 | 10.3 | 3.2 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $34.6 \%$ children are 8 years old but there are also $17.7 \%$ who are $7,27.4 \%$ who are $9,10.5 \%$ who are 10 and $4.7 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

## Table 4: \% Children by class and READING level

All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 30.2 | 35.5 | 16.0 | 8.9 | 9.5 | 100 |
| II | 17.6 | 25.9 | 15.5 | 15.2 | 25.9 | 100 |
| III | 11.1 | 20.4 | 15.2 | 18.0 | 35.4 | 100 |
| IV | 6.1 | 14.0 | 12.9 | 16.9 | 50.1 | 100 |
| V | 4.5 | 8.4 | 10.2 | 16.3 | 60.6 | 100 |
| VI | 2.1 | 5.4 | 7.1 | 12.8 | 72.7 | 100 |
| VII | 1.4 | 4.2 | 4.3 | 11.4 | 78.7 | 100 |
| VIII | 0.9 | 3.0 | 1.8 | 13.0 | 81.3 | 100 |
| Total | 9.7 | 15.2 | 10.7 | 14.1 | 50.4 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 11.1\% children cannot even read letters, $20.4 \%$ can read letters but not more, $15.2 \%$ can read words but not Std I level text or higher, 18\% can read Std I level text but not Std II level text, and $35.4 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Table 5: Trends over time

\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 88.0 | 96.1 | 90.8 | 78.3 | 90.6 | 82.2 |
| 2011 | 83.9 | 93.4 | 87.4 | 72.1 | 86.4 | 76.6 |
| 2012 | 72.1 | 93.6 | 81.0 | 59.8 | 83.2 | 69.0 |
| 2013 | 66.7 | 94.5 | 79.5 | 56.6 | 80.0 | 66.4 |
| 2014 | 72.8 | 93.2 | 82.4 | 58.0 | 82.6 | 68.4 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

> मगर उसका छोटा भाई अमन बहुत नटखट था। एक दिन दोनों बाज़ार में घूम रहे थे। अमन ने रास्ते में पकौड़े देखे। उसे पकौड़े बहुत पसंद थे। माँ उसके लिए पकौड़े बनाती थी। नगमा ने कहा यह पकौड़े तीखे होंगे। मगर अमन नहीं माना। अमन ने पकौड़े खाए और उसकी आँखों से आँसू निकलने लगे।

| Table 6: Trends over time \% Children in Std IV and V at different READING levels by school type 2010-2014 |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \% Children in Std IV who can read at least Std I level text |  |  | \% Children in Std $V$ who can read Std II level text |  |  |
|  | Govt. | Pvt. | Govt. \& Pvt.* | Govt. | Pvt. | Govt. \& Pvt.* |
| 2010 | 70.2 | 86.5 | 74.9 | 63.7 | 72.5 | 65.8 |
| 2011 | 61.5 | 78.2 | 66.3 | 54.2 | 68.4 | 58.3 |
| 2012 | 52.5 | 77.1 | 61.3 | 52.2 | 70.1 | 58.1 |
| 2013 | 59.2 | 73.6 | 65.0 | 54.7 | 72.3 | 61.3 |
| 2014 | 54.7 | 85.5 | 67.0 | 52.0 | 75.0 | 60.3 |

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Data has not been presented where sample size was insufficient.

## Arithmetic

## Table 7: \% Children by class and ARITHMETIC level

 All schools 2014| Std | Not even 1-9 | Recognize numbers |  | $\begin{aligned} & \text { Can } \\ & \text { subtract } \end{aligned}$ | Can divide | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1-9 | 10-99 |  |  |  |
| I | 27.9 | 32.9 | 33.1 | 4.1 | 2.0 | 100 |
| 11 | 12.8 | 32.3 | 33.7 | 18.1 | 3.1 | 100 |
| III | 8.1 | 29.9 | 32.8 | 18.1 | 11.2 | 100 |
| IV | 5.9 | 20.4 | 31.7 | 17.6 | 24.3 | 100 |
| V | 2.0 | 13.4 | 30.2 | 24.2 | 30.2 | 100 |
| VI | 2.5 | 7.0 | 27.5 | 22.7 | 40.4 | 100 |
| VII | 0.5 | 6.3 | 28.7 | 24.1 | 40.3 | 100 |
| VIII | 1.4 | 4.5 | 23.5 | 22.9 | 47.7 | 100 |
| Total | 8.0 | 19.0 | 30.3 | 18.7 | 24.0 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $8.1 \%$ children cannot even recognize numbers 1-9, $29.9 \%$ can recognize numbers up to 9 but not more, $32.8 \%$ can recognize numbers up to 99 but cannot do subtraction, $18.1 \%$ can do subtraction but cannot do division, and $11.2 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

## Table 8: Trends over time

\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 85.1 | 95.3 | 88.7 | 73.5 | 89.8 | 78.7 |
| 2011 | 84.7 | 93.0 | 87.7 | 64.3 | 86.7 | 71.3 |
| 2012 | 75.8 | 97.4 | 84.8 | 55.7 | 86.3 | 67.8 |
| 2013 | 71.9 | 97.2 | 83.5 | 44.4 | 83.5 | 60.8 |
| 2014 | 79.3 | 95.7 | 87.1 | 45.5 | 84.5 | 62.0 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

## Table 9: Trends over time

\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can <br> do division |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 61.4 | 82.2 | 67.5 | 48.7 | 61.0 | 51.6 |
| 2011 | 47.3 | 69.7 | 53.6 | 31.0 | 41.9 | 34.2 |
| 2012 | 37.4 | 65.4 | 47.4 | 27.3 | 50.1 | 34.9 |
| 2013 | 35.9 | 64.7 | 47.4 | 23.9 | 53.6 | 35.1 |
| 2014 | 26.8 | 65.1 | 42.2 | 21.4 | 46.1 | 30.3 |
| * This is the weighted average for children in government and private schools only. |  |  |  |  |  |  |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

## Uttarakhand ruraL

| VIII | 2.2 | 5.2 | 17.7 | 21.8 | 53.1 | 100 |
| Total | 13.0 | 12.6 | 23.1 | 21.9 | 29.5 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 17.4 \% children cannot even read capital letters, $15.8 \%$ can read capital letters but not more, $25.9 \%$ can read small letters but not words or higher, $20.9 \%$ can read words but not sentences, and $20.2 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

Table 12: Trends over time
\% Children in Std I-V and Std VI-VIII by school type and
TUITION 2011-2014

| Std |  |  |  |  | Category |
| :---: | :--- | ---: | ---: | ---: | :---: |

| \% Schools with total enrollment <br> of 60 or less | 69.0 | 69.4 | 72.8 | 67.5 | 76.7 |
| \% Schools where Std II children <br> were observed sitting with one <br> or more other classes | 61.9 | 70.4 | 73.6 | 73.2 | 80.1 |

## RTE indicators

The Right of Children to Free and Compulsory Education (RTE) Act, 2009 specifies a series of norms and standards for a school. Data on selected measurable indicators of RTE are collected in ASER.

Table 17: Schools meeting selected RTE norms 2010-2014

| \% Schools meeting the following RTE norms: |  | 2010 | 2011 | 2012 | 2013 | 2014 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PTR \& CTR | Pupil-teacher ratio (PTR) | 13.7 | 16.3 | 23.2 | 20.5 | 24.6 |
|  | Classroom-teacher ratio (CTR) | 87.4 | 84.7 | 89.1 | 85.5 | 86.1 |
| Building | Office/store/office cum store | 87.7 | 83.0 | 84.9 | 87.0 | 88.3 |
|  | Playground | 67.0 | 67.5 | 65.0 | 75.2 | 68.1 |
|  | Boundary wall/fencing | 66.8 | 61.1 | 56.9 | 64.9 | 56.6 |
| Drinking water | No facility for drinking water | 22.1 | 19.3 | 21.7 | 15.3 | 17.7 |

| Age 3 |  | 10.6 |  |  |  | 65.6 | 100 |  |
| Age 4 | 25.5 | 27.2 |  |  |  | 47.3 | 100 |  |
| Age 5 | 10.4 | 26.5 | 25.2 | 19.0 | 2.4 | 16.5 | 100 |  |
| Age 6 | 3.2 | 18.1 | 38.4 | 30.6 | 2.5 | 7.3 | 100 |  |

Note: For 3 and 4 year old children, only pre-school status is recorded.
ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $11.1 \%$ in 2006, 10\% in 2009, 10\% in 2011 and 9.2\% in 2014.

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 23.1 | 33.5 | 21.2 | 12.5 |  |  |  |  | 7 |  |  |  | 100 |
| \|| | 4.6 | 14.8 | 30.6 | 25.9 | 9.6 | 9.0 |  |  | 5 |  |  |  | 100 |
| III | 5 | 0 | 12.7 | 33.3 | 19.6 | 16.9 | 5.6 | 4.9 |  | 2.2 |  |  | 100 |
| IV |  | 5.5 |  | 16.1 | 23.3 | 30.3 | 10.3 | 9.2 |  | 5 |  |  | 100 |
| V |  | 1.6 |  | 6.1 | 10.5 | 34.1 | 19.7 | 17.1 | 6.0 |  | 4.9 |  | 100 |
| VI | 5.7 |  |  |  |  | 16.8 | 25.8 | 30.2 | 11.6 | 6.6 | 3.4 |  | 100 |
| VII | 2.1 |  |  |  |  | 6.6 | 10.5 | 36.1 | 23.8 | 13.5 | 5.7 | 1.8 | 100 |
| VIII | 7.4 |  |  |  |  |  |  | 19.2 | 30.7 | 27.6 | 11.0 | 4.1 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $33.3 \%$ children are 8 years old but there are also $12.7 \%$ who are $7,19.6 \%$ who are $9,16.9 \%$ who are $10,5.6 \%$ who are $11,4.9 \%$ who are 12 and $2.2 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> (Std II Text) | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 54.2 | 29.7 | 8.2 | 3.9 | 4.0 | 100 |
| II | 31.3 | 35.1 | 14.1 | 7.9 | 11.7 | 100 |
| III | 18.4 | 30.8 | 15.9 | 13.3 | 21.7 | 100 |
| IV | 11.7 | 24.1 | 16.1 | 15.1 | 33.0 | 100 |
| V | 8.2 | 18.1 | 13.8 | 15.2 | 44.7 | 100 |
| VI | 5.1 | 13.3 | 11.3 | 14.8 | 55.5 | 100 |
| VII | 3.8 | 9.7 | 8.0 | 13.5 | 65.0 | 100 |
| VIII | 3.4 | 7.5 | 6.8 | 11.6 | 70.8 | 100 |
| Total | 20.0 | 22.7 | 12.0 | 11.4 | 34.0 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $18.4 \%$ children cannot even read letters, $30.8 \%$ can read letters but not more, $15.9 \%$ can read words but not Std I level text or higher, 13.3\% can read Std I level text but not Std II level text, and $21.7 \%$ can read Std II level text. For each class, the total of all these exclusive categories is $100 \%$.

## Table 5: Trends over time

\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 77.2 | 91.1 | 82.4 | 56.1 | 77.8 | 64.2 |
| 2011 | 66.1 | 89.7 | 77.4 | 40.1 | 74.4 | 55.6 |
| 2012 | 55.6 | 87.9 | 72.2 | 27.1 | 69.3 | 47.8 |
| 2013 | 53.5 | 87.4 | 70.1 | 31.6 | 73.9 | 52.3 |
| 2014 | 50.0 | 86.4 | 69.1 | 27.9 | 71.7 | 50.8 |

* This is the weighted average for children in government and private schools only.

## Chart 4: Trends over time

\% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014

## Reading Tool

> रामपुर में एक मैदान था। वहाँ कुछ नहीं उगता था। वहाँ कोई खेलने नहीं जाता था। एक दिन कुछ लोग आए। उन्होंने गाँव के लोगों को बुलाया। सबने मिलकर तय किया कि यहाँ बग़ीचा बनाया जाए। खाद मंगाकर हर तरह के पौधे लगाए गए। सही समय पर पानी दिया गया। आज वहाँ एक सुंदर बग़ीचा है। इसलिए वहाँ सभी खेलने जाते हैं।

रूपा बाहर खेल रही थी। खेलते-खेलते रात हो गई। रूपा अपने घर चली गई। वह खाना खाकर सो गई।

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by

\hline 2014 \& 26.9 \& 67.6 \& 48.1 \& 26.8 \& 61.4 \& 44.6 <br>

* This is the weighted average for children in government and private schools only.
\end{tabular}

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even <br> $1-9$ | Recognize numbers |  | Can <br>  <br>  <br> subtract | Can <br> divide | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 32.8 | 14.3 | 3.0 | 0.8 | 100 |
| II | 24.9 | 39.8 | 23.2 | 9.2 | 2.9 | 100 |
| III | 13.2 | 35.1 | 28.6 | 15.6 | 7.6 | 100 |
| IV | 7.3 | 28.6 | 28.5 | 19.5 | 16.2 | 100 |
| V | 5.6 | 21.1 | 26.6 | 21.0 | 25.7 | 100 |
| VI | 3.1 | 15.8 | 27.6 | 22.2 | 31.4 | 100 |
| VII | 2.6 | 11.6 | 27.0 | 21.8 | 37.0 | 100 |
| VIII | 2.4 | 9.8 | 24.8 | 19.3 | 43.7 | 100 |
| Total | 16.1 | 26.1 | 24.5 | 15.4 | 17.9 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 13.2\% children cannot even recognize numbers 1-9, $35.1 \%$ can recognize numbers up to 9 but not more, $28.6 \%$ can recognize numbers up to 99 but cannot do subtraction, $15.6 \%$ can do subtraction but cannot do division and $7.6 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

| 2014 | 17.5 | 52.7 | 35.9 | 12.1 | 38.7 | 25.8 |
| * This is the weighted average for children in government and private schools only. |  |  |  |  |  |  |

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Reading and comprehension in English

Table 10: \% Children by class and READING level in ENGLISH All schools 2014

| Std | Not even <br> capital <br> letters | Capital <br> letters | Small <br> letters | Simple <br> words | Easy <br> sentences | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I | 59.7 | 15.9 | 15.2 | 7.3 | 1.9 | 100 |
| II | 41.1 | 21.3 | 20.2 | 11.8 | 5.6 | 100 |
| III | 29.8 | 20.4 | 24.7 | 16.4 | 8.8 | 100 |
| IV | 22.3 | 18.8 | 23.9 | 19.9 | 15.1 | 100 |
| V | 17.3 | 15.5 | 23.4 | 22.7 | 21.1 | 100 |
| VI | 12.1 | 12.3 | 23.1 | 25.5 | 27.1 | 100 |
| VII | 9.9 | 10.2 | 20.9 | 24.8 | 34.1 | 100 |
| VIII | 8.9 | 8.1 | 19.0 | 23.9 | 40.1 | 100 |
| Total | 28.2 | 15.9 | 21.1 | 17.9 | 16.9 | 100 |

How to read this table: Each cell shows the highest level in reading English achieved by a child. For example, in Std III, 29.8\% children cannot even read capital letters, $20.4 \%$ can read capital letters but not more, $24.7 \%$ can read small letters but not words or higher, $16.4 \%$ can read words but not sentences, and $8.8 \%$ can read sentences. For each class, the total of all these exclusive categories is $100 \%$.

Table 11: \% Children by class who CAN COMPREHEND ENGLISH All schools 2014

| Std | Of those who can read <br> words, \% children <br> who can tell meanings <br> of the words | Of those who can read <br> sentences, \% children <br> who can tell meanings <br> of the sentences |
| :--- | :---: | :---: |
| I | 60.9 | 32.9 |
| II | 60.5 | 33.9 |
| III | 60.3 | 43.9 |
| IV | 59.8 | 49.7 |
| V | 60.3 | 53.5 |
| VI | 58.1 | 56.9 |
| VII | 57.7 | 59.7 |
| VIII | 55.6 | 61.6 |
| Total | 59.0 | 54.7 |

## Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

Table 12: Trends over time

ASER 2014

Chart 1: Trends over time
\% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $12.1 \%$ in $2006,8.5 \%$ in 2009, $4.3 \%$ in 2011 and $3.6 \%$ in 2014

| Table 2: Sample description \% Children in each class by age 2014 |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Std | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | Total |
| 1 | 21.0 | 34.4 | 34.6 | 6.8 |  |  |  | 3 | . 2 |  |  |  | 100 |
| \|| | 1.6 | 11.4 | 36.2 | 35.4 | 9.2 |  |  |  | 6.4 |  |  |  | 100 |
| III | 1. | 0 | 17.0 | 39.2 | 26.4 | 10.4 |  |  |  | . 1 |  |  | 100 |
| IV |  | 4.5 |  | 12.8 | 32.6 | 34.6 | 9.7 |  |  | 5.8 |  |  | 100 |
| V |  |  | 2.0 |  | 7.7 | 43.9 | 24.1 | 15.1 |  |  | . 1 |  | 100 |
| VI | 0.7 |  |  |  |  | 12.4 | 35.8 | 32.4 | 10.8 | 5.5 | 2.5 |  | 100 |
| VII | 2.1 |  |  |  |  |  | 10.2 | 34.5 | 29.9 | 15.8 | 5.1 | 2.4 | 100 |
| VIII | 1.8 |  |  |  |  |  |  | 10.6 | 34.8 | 37.8 | 10.0 | 5.0 | 100 |

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, $39.2 \%$ children are 8 years old but there are also $17 \%$ who are $7,26.4 \%$ who are 9 , $10.4 \%$ who are 10 and $6.1 \%$ who are older.

Chart 3: Trends over time
\% Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here.

Data has not been presented where sample size was insufficient.

## Reading

Table 4: \% Children by class and READING level
All schools 2014

| Std | Not even <br> letter | Letter | Word | Level 1 <br> (Std I Text) | Level 2 <br> Std II Text) | Total |
| :--- | ---: | ---: | ---: | :---: | :---: | :---: |
| I | 24.5 | 33.9 | 22.1 | 9.1 | 10.4 | 100 |
| II | 13.4 | 26.8 | 24.3 | 15.2 | 20.3 | 100 |

| Total | 7.8 | 15.5 | 15.6 | 15.6 | 45.4 | 100 |

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, $7 \%$ children cannot even read letters, $18.6 \%$ can read letters but not more, $18.6 \%$ can read words but not Std I level text or higher, 19.8\% can read Std I level text but not Std II level text, and 36.1\% can read Std II level text For each class, the total of all these exclusive categories is $100 \%$.

## Table 5: Trends over time

\% Children in Std II and III at different READING levels by school type 2010-2014

| Year | \% Children in Std II who can <br> read at least letters |  | \% Children in Std III who can <br> read at least words |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 92.5 |  | 93.0 | 77.0 |  | 77.4 |
| 2011 | 90.0 |  | 90.6 | 73.5 |  | 75.3 |
| 2012 | 83.8 |  | 84.6 | 62.9 |  | 64.3 |
| 2013 | 81.3 |  | 82.7 | 66.9 |  | 69.4 |
| 2014 | 84.3 |  | 86.9 | 72.6 |  | 74.8 |

* This is the weighted average for children in government and private schools only.

## Reading Tool

তিथि বাড়ির একমাত্র মেয়ে। বাবা মা তাকে খুব ভালোবাসেন। সে মাছ খেতে ভালোবাসে। ওর বাবা রোজ বাড়িতে মাছ আনেন। তিथि তখन মায়ের পাশে ঘুরঘুর করতে থাকে। মাছ তেলে ছাড়া হলেই তার মন খুশিতে ভরে যায়। তিथि একসাথে তিন চারটে মাছ ভাজা খেয়ে নেয়। বাবা তিথিকে निয়ে বাজারে যান। মাঝো মাঝেে বাজার থেকে বাবা ইলিশ মাছও আনেন। সেদিন তিথির খুশির সীমा थाকে ना।

আজ মাঠ মেলা বসেছে। রানা আর মালা वেলায় যাবে। সাথে যাবে মা আরা বাবা। ఆরা সবাই জিলিপি খাবে।

Table 6: Trends over time
\% Children in Std IV and V at different READING levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> read at least Std I level text |  | \% Children in Std V who can <br> read Std II level text |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
|  | 71.2 |  | 71.3 | 54.2 |  | 54.2 |
| 2011 | 59.6 |  | 60.7 | 48.8 |  | 49.0 |
| 2012 | 58.0 |  | 60.7 | 48.7 |  | 48.9 |
| 2013 | 58.1 |  | 60.1 | 51.3 |  | 51.3 |
| 2014 | 60.3 |  | 63.3 | 51.8 |  | 53.1 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

## Arithmetic

Table 7: \% Children by class and ARITHMETIC level
All schools 2014

| Std | Not even <br> $1-9$ | Recognize numbers |  | Can | Can <br> divide | Total |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 40.0 | 27.9 | 7.4 | 2.1 | 100 |
| II | 13.1 | 33.2 | 30.5 | 14.5 | 8.6 | 100 |
| III | 5.8 | 22.9 | 35.4 | 19.3 | 16.7 | 100 |
| IV | 3.0 | 20.4 | 32.4 | 23.7 | 20.5 | 100 |
| V | 2.2 | 13.6 | 28.2 | 23.6 | 32.5 | 100 |
| VI | 1.9 | 7.0 | 34.3 | 25.1 | 31.7 | 100 |
| VII | 2.2 | 6.8 | 37.6 | 19.8 | 33.6 | 100 |
| VIII | 0.7 | 3.9 | 34.2 | 20.9 | 40.3 | 100 |
| Total | 7.1 | 19.1 | 32.4 | 18.8 | 22.6 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 5.8\% children cannot even recognize numbers 1-9, $22.9 \%$ can recognize numbers up to 9 but not more, $35.4 \%$ can recognize numbers up to 99 but cannot do subtraction, $19.3 \%$ can do subtraction but cannot do division, and $16.7 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

Table 8: Trends over time
\% Children in Std II and III at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std II who can <br> recognize numbers 1-9 <br> and more |  | \% Children in Std III who can <br> recognize numbers <br> 10-99 and more |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt. * | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 93.5 |  | 93.9 | 75.8 |  | 76.1 |
| 2011 | 92.9 |  | 93.2 | 72.8 |  | 74.2 |
| 2012 | 91.1 |  | 91.7 | 62.6 |  | 65.0 |
| 2013 | 87.1 |  | 87.9 | 60.2 |  | 63.2 |
| 2014 | 84.7 |  | 87.7 | 68.9 |  | 71.5 |

* This is the weighted average for children in government and private schools only.

## Chart 5: Trends over time

\% Children who can do DIVISION by class
All schools 2010, 2012 and 2014

## Math Tool

## Table 9: Trends over time

\% Children in Std IV and V at different ARITHMETIC levels by school type 2010-2014

| Year | \% Children in Std IV who can <br> do at least subtraction |  | \% Children in Std V who can <br> do division |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Govt. | Pvt. |  <br> Pvt.* | Govt. | Pvt. |  <br> Pvt. * |
| 2010 | 62.6 |  | 63.2 | 38.1 |  | 38.2 |
| 2011 | 55.9 |  | 56.7 | 31.8 |  | 31.7 |
| 2012 | 45.2 |  | 48.1 | 28.7 |  | 29.2 |
| 2013 | 42.8 |  | 45.2 | 27.1 |  | 27.7 |
| 2014 | 40.5 |  | 44.4 | 31.3 |  | 32.5 |

* This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

# Divisional estimates of learning outcomes and schooling status: precision of ASER estimates 

Wilima Wadhwa, Director, ASER Centre

Every year since 2005, ASER has been presenting estimates of learning and status of schooling at the state and district levels. The survey design of ASER is based on the premise of generating estimates at the district level. Having estimates at this level is desirable since education plans are made at the district level. As a result, ASER is one of the largest surveys undertaken by any organisation surveying an average of 650,000 children in the age group of 3-16.
ASER is a household survey, undertaken in almost all rural districts of India. Within each district, 30 villages are randomly chosen' and in each village 20 households are randomly selected for a total of 600 households per district. This translates into around 900-1200 children per district.
The statistical precision of district level estimates is an issue because of the ASER sample design - namely clustering and absence of stratification at the village level. In a design without clustering, children in the relevant age group would be directly sampled. Not only is this expensive (in terms of survey time), it is also difficult to have a reliable population frame that could be used for sampling. Instead ASER employs a two-stage clustering design. The first stage clustering happens when villages are randomly picked. The second stage clustering is when households within a village are randomly selected and the children belonging to that household are tested.

While this is an inexpensive and practical way of sampling children, it is well known that clustering increases the variability of estimates. One way of increasing precision at the district level would have been to stratify the village sample according to age of children or school type. However, this would require a prior household listing, which is expensive both in terms of time and resources.

The ASER sample is stratified, however, at the district level. In so far as outcomes within a district are more homogenous than across districts, stratification within the district leads to more precise estimates at the state level.

Ramaswami and Wadhwa (2009)² studied the precision of ASER state and district level estimates for a selection of states and variables for the year 2008. They find that state level averages are estimated precisely - with a margin of error of $5 \%$ or less. However, district level estimates are less precisely estimated. The precision varies across states and districts and according to the learning outcome. In both cases, learning outcomes of children in class 3-5 are relatively less precisely estimated.

Two commonly used measures of precision are the margin of error and the $95 \%$ confidence interval.
The margin of error is the \% interval around the point estimate that almost certainly contains the population estimate (i.e., with $95 \%$ probability). For instance, if x is the margin of error then the population proportion lies within $\pm x \%$ of the sample proportion with $95 \%$ probability.

Suppose $\hat{p}$ is the estimated sample proportion and is the associated standard error. From statistical theory, it is known that the interval [ ] contains the population proportion with $95 \%$ probability - $95 \%$ confidence interval. The margin of error expresses the confidence interval in terms of the sample estimate. It is thus defined as

$$
m e=\frac{2 \hat{\sigma}}{\hat{p}}
$$

A margin of error of $10 \%$ is regarded as an acceptable degree of precision in many studies (United Nations, 2005). ${ }^{3}$ Estimates with a margin of error in excess of $20 \%$ are regarded as estimates with low precision.

[^74]Note that the margin of error depends on the standard error. The estimated proportion and the standard error itself depends on the estimated proportion. For a given sample size, therefore, a lower precision will be associated with a variable which has a lower incidence in the population and/or a higher standard error. Further, in the case of proportions, for a given sample size, the standard error is the largest for a population proportion close to 0.5 . On the other hand, for a given incidence, one way to reduce the standard error and therefore increase precision is to increase the sample size.
In the case of ASER, as shown by Ramaswami and Wadhwa (2009), precision is not an issue at the state level. At the district level, however, since sample sizes in sub-populations of interest are often much smaller than the total sample size, precision can be an issue. However, for a national survey, increasing the sample size at the district level is extremely costly. In the past, ASER clubbed classes while presenting district level estimates, in an attempt to increase the sample size. However, precision gains from this strategy were limited, especially for variables whose estimated proportions were in the vicinity of 0.5 .

One way to provide sub-state estimates with acceptable levels of precision is to club districts within a state. ${ }^{4}$ Many states have administrative divisions, comprised of two or more districts that can be used as units of analysis. These divisions are at a level of aggregation between the state and district level. This year, we provide divisional estimates from 2010 to 2014 for the states that have administrative divisions. ${ }^{5}$ These are Bihar, Chhattisgarh, Haryana, Jammu \& Kashmir, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Rajasthan, Uttar Pradesh, Uttarakhand and West Bengal. ${ }^{6}$ In addition, in Andhra Pradesh, Gujarat, Himachal Pradesh, Punjab and Tamil Nadu, divisions were formed using geographical regions commonly used in the states. ${ }^{7}$

Divisional estimates are provided for the following 6 variables:
\% children in age group 6-14 years who are out of school
\% children in age group 6-14 years who are in private schools
\% children in Std I-II who can read letters or more in own language
\% children in Std I-II who can recognise numbers (1-9) or more
\% children in Std III-V who can read level 1 (Std I) text or more in own language
\% children in Std III-V who can subtract or do more

Figure 1: State Learning Levels, Margin of Error (\%), 2014

In addition to the point estimates for 2010-2014, the 95\% confidence interval [ $\hat{p} \pm 2 \hat{\sigma}$ ] is also presented. Apart from the divisional estimates, the point estimate as well as the confidence interval are also presented for the state as a whole.

Figure 1 presents the margin of error for the four learning outcomes in selected states in 2014. As is clear from the figure, most of these are below 5\%. Also, note that learning outcomes in Std IIIV are less precisely estimated as compared to those in Std I-II. Similar numbers are obtained for previous years.
At the division level, among the four learning outcomes the variability is the most for learning levels in Std III-V. As a result,

[^75]the margin of error is the highest for this variable. In discussing the district level estimates we concentrate on this variable since this gives us the worst case scenario.

We can look at division level estimates in two ways. First, for a particular year and state, one can examine the precision of estimates across divisions; and second, for a particular state and division, we can look at the margin of error across years. Figures 2.1 and 2.2 present the margins of error, for language and math in Std III-V, in 2014 across divisions (D1, D2, D3,....) of selected states. Language learning outcomes in most states are estimated with margins of under or close to $10 \%$. The exception is Madhya Pradesh. Across the board precision levels are lower for Math learning outcomes, where most states have margins of error within 10-15\% and those for Madhya Pradesh are close to 20-25\%.

Figure 3.2: Math Std III-V, Margin of Error (\%) Selected Divisions, 2010-2014

Figures 3.1 and 3.2 present the margins of error, for language and math in Std III-V, for one division each in the selected states, from 2010 to 2014. Margins of error are fairly robust over time. Again, across the board precision levels are lower for Math learning outcomes.

Why are margins of error consistently higher for math in Std III-V? Similarly, compared to learning outcomes in Std I-II, why are learning outcomes in Std III-V less precisely estimated? First, given a sample size, the margin of error is inversely proportional to the incidence of the variable concerned. What this implies is that any variable that has a low incidence in the population will be estimated with a high margin of error. Intuitively this makes sense because if something is not observed very frequently, one would need a much larger sample size to measure it accurately. However, this is not that much of a problem if the standard error is small. To see why, consider the case of out of school children - say the point estimate is 0.04 (i.e., 4\%) with a standard error of 0.01. The margin of error would be $50 \%(=((2$ * 0.01)/0.04)*100), which is very high. However, note that this translates into confidence bounds of $\pm 2$ percentage points, i.e., with $95 \%$ probability the true proportion of out
of school children lies between $2 \%$ and $6 \%$. In other words, given a low incidence, a high margin of error may still translate into tight confidence bands. Another way of looking at this is by focusing on in-school children instead of out of school children. If out of school children are $4 \%$ then in-school children will be $96 \%$ with the same standard error of $1 \%$ giving a margin of error of only $2.1 \%$ and confidence bounds of $\pm 2$ percentage points around the point estimate of $96 \%$.

Second, the margin of error is directly proportional to the standard error. For a given sample size, a large standard error, implying imprecise estimation, not surprisingly will result in a high margin of error. In the case of proportions, the standard error itself depends on the value of the proportion, and is larger when the value is closer to 0.5 . Intuitively, the reason behind this is that the greatest uncertainty is associated with a proportion of 0.5 , requiring larger sample sizes to measure it accurately.

By and large, the values of chosen variables for Std I-II learning outcomes are higher as compared to the values of chosen variables for Std III-V learning outcomes, resulting in lower margins of error. ${ }^{8}$ Similarly, in Std III-V, language learning levels are better than those of math with the latter proportion often being close to 0.5 resulting in high margins of error for math.

Overall, the divisional estimates are more precisely estimated as compared to district level estimates. Clubbing districts increases the sample size and lowers the standard errors. It also smoothes the jumpiness in point estimates often observed at the district level. One of the problems associated with large standard errors, and therefore, wide confidence intervals is that it is difficult to identify significant changes across districts and time. That problem is ameliorated with divisional estimates to a large extent.

|  | $\pm 2.12$ | $\pm 2.00$ | $\pm 2.18$ | $\pm 2.17$ | $\pm 2.80$ | $\pm 2.21$ | $\pm 2.15$ | $\pm 2.22$ | $\pm 2.35$ | $\pm 2.72$ |

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Coastal Andhra division of Andhra Pradesh, in 2014, \% of Std I-II children who could read letters or more is $72.26 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 3.59 \%$ points of the estimate, i.e., between 68.67\% and $75.85 \%$.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the $95 \%$ confidence interval for the estimate. For instance, in Bhagalpur division of Bihar, in 2014, \% of Std I-II children who could read letters or more is $50.71 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 7.05 \%$ points of the estimate, i.e., between $43.67 \%$ and $57.76 \%$.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Central division of Gujarat, in 2014, \% of Std I-II children who could read letters or more is $54.63 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 5.30 \%$ points of the estimate, i.e., between $49.34 \%$ and $59.93 \%$.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Kangra division of Himachal Pradesh, in 2014, \% of Std I-II children who could read letters or more is $83.94 \%$. With 95\% probability, the true population proportion lies within $\pm 6.15 \%$ points of the estimate, i.e., between 77.78\% and 90.09\%.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the $95 \%$ confidence interval for the estimate. For instance, in Kolhan division of Jharkhand, in 2014, \% of Std III children who could read letters or more is $52.15 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 7.21 \%$ points of the estimate, i.e., between $44.93 \%$ and $59.36 \%$.

| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  |  |  |  |  |  |  |  |  |

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Bangalore division of Karnataka, in 2014, \% of Std III children who could read letters or more is $68.34 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 4.35 \%$ points of the estimate, i.e., between $63.99 \%$ and $72.69 \%$.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Bhopal division of Madhya Pradesh, in 2014, \% of Std I-II children who could read letters or more is $53.62 \%$. With 95\% probability, the true population proportion lies within $\pm 5.97 \%$ points of the estimate, i.e., between $47.65 \%$ and 59.58\%.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Amravati division of Maharashtra, in 2014, \% of Std I-II children who could read letters or more is $63.37 \%$. With 95\% probability, the true population proportion lies within $\pm 4.82 \%$ points of the estimate, i.e., between 58.55\% and 68.19\%.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Central division of Odisha, in 2014, \% of Std I-II children who could read letters or more is $87.46 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 3.31 \%$ points of the estimate, i.e., between $84.15 \%$ and $90.76 \%$.

| State | 52.5 | 50 | 49.16 | 50.19 | 56.13 | 43.18 | 41.88 | 38.72 | 39.19 | 45.8 |
|  | $\pm 2.30$ | $\pm 2.33$ | $\pm 2.31$ | $\pm 2.34$ | $\pm 2.25$ | $\pm 2.20$ | $\pm 2.33$ | $\pm 2.18$ | $\pm 2.29$ | $\pm 2.43$ |

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Central division of Tamil Nadu, in 2014, \% of Std III children who could read letters or more is $60.79 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 6.62 \%$ points of the estimate, i.e., between $54.16 \%$ and $67.41 \%$.

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Agra division of Uttar Pradesh, in 2014, \% of Std I-II children who could read letters or more is $58.42 \%$. With $95 \%$ probability, the true population proportion lies within $\pm 4.57 \%$ points of the estimate, i.e., between 53.85\% and 62.99\%.

|  | $\pm 3.40$ | $\pm 2.92$ | $\pm 2.99$ | $\pm 3.14$ | $\pm 2.75$ | $\pm 3.85$ | $\pm 3.12$ | $\pm 3.05$ | $\pm 3.25$ | $\pm 3.00$ |

Note: Districts have been clubbed into divisions to produce these estimates. The grouping of districts is based on administrative divisions used in the state or by geographical regions.

The first row for each division gives the estimate of the relevant variable/year. The numbers below the estimate, in the second row, are twice the standard error of the corresponding estimate and represent the 95\% confidence interval for the estimate. For instance, in Burdwan division of West Bengal, in 2014, \% of Std I-II children who could read letters or more is $81.04 \%$. With 95\% probability, the true population proportion lies within $\pm 4.90 \%$ points of the estimate, i.e., between 76.13\% and 85.94\%.

## Sample Design of Rural ASER 2014

Wilima Wadhwa, Director, ASER Centre

The purpose of rural ASER 2014 is twofold: (i) to get reliable estimates of the status of children's schooling and basic learning (reading and math ability); and (ii) to measure the change in these statistics over time. Every year the core set of questions regarding schooling status and basic learning levels remains the same. However a set of new questions is added for exploring different dimensions of schooling and learning at the elementary stage. The latter set of questions is different each year.

ASER 2006 and 2007 tested reading comprehension for different kinds of readers. ASER 2007 introduced testing in English and asked questions on paid tuition, which were repeated in 2009. ASER 2008 for the first time had questions on telling time and oral math problems using currency. In addition, ASER 2008 incorporated questions on village infrastructure and household assets. Investigators were asked to record whether the village visited had a pukka road leading to it, a bank, a ration shop, etc. In the sampled households, information on household assets (availability of television, type of house etc.) was recorded. These questions were repeated in 2009 and in addition father's education was also recorded. ASER 2010, while retaining the core questions on parents' education, household and village characteristics, introduced higher level testing tools for the first time. Questions on critical thinking were introduced, based on simple mathematical operations that appear in Std V textbooks. These were further refined in ASER 2011. ASER 2012 included testing of reading and comprehension of English that was first introduced in 2007 and repeated in 2009. ASER 2013 added expenditure on private tuition to the household questionnaire.

ASER 2014 brings together elements from various previous ASER rounds. The core questions on school status and basic reading and arithmetic remain. Children have been tested in English again, after 2012. In addition, parents' education, and household and village characteristics continue to be surveyed.

Every year, ASER surveyors visit a government primary or upper primary school in each sampled village. The school information is recorded through observations (such as attendance and usability of the facilities) and using information provided by the school (such as grants information). School observations have been reported in 2005, 2007 and 2009-2013, and are also reported in ASER 2014. Beginning in 2010, school information is collected on RTE indicators. In ASER 2014 grant information for the 2013-14 and current fiscal year has also been collected.

Finally, ASER 2014 continues the process of strengthening and streamlining started in 2008. Recheck of 4 or more villages in each district was introduced in 2008. This process was further strengthened in 2009. In ASER 2010, special attention was focused on improving training. In ASER 2011, in addition, master trainers monitored the survey process in the field. In ASER 2012, phone recheck was used on a large scale during the survey. During the survey, master trainers were called from a state specific call centre to get feedback on a daily basis. ASER 2013 incorporated all of these procedures and further streamlined processes in the field. ASER 2014 adds external rechecks to the process.

Since one of the goals of ASER is to generate estimates of change in learning, a panel survey design would provide more efficient estimates of the change. However, given the large sample size of the ASER surveys and cost considerations, we adopted a rotating panel of villages rather than children. In ASER 2013, we retained the 10 villages from 2011 and 2012 and added 10 new villages. In ASER 2014 we dropped the 10 villages from ASER 2011, kept 10 villages each from 2012 and 2013 and added 10 more villages from the census village directory.

The sampling strategy used generates a representative picture of each district. Almost all rural districts are surveyed. The estimates obtained are then aggregated to the state and all India levels.

Since estimates are generated at the district level, the minimum sample size calculations are done at the district level. The sample size is determined by the following considerations:

- Incidence of what is being measured in the population. Prior to ASER 2005, a survey of learning had never been done in India. Therefore, the incidence of what we were trying to measure was unknown in the population. However, now we can use estimates from previous ASER rounds for sample size calculations.
- Confidence level of estimates. The standard used is $95 \%$.
- Precision required on either side of the true value. The standard degree of accuracy most surveys employ is between 5 and 10 per cent. An absolute precision of $5 \%$ along with a $95 \%$ confidence level implies that the estimates generated by the survey are within 5 percentage points of the true values with a $95 \%$ probability. The precision can also be specified in relative terms - a relative precision of 5\% means that the estimates will be within $5 \%$ of the true value. Relative precision requires higher sample sizes.

Sample size calculations can be done in various ways, depending on what assumptions are made about the underlying population. With a $50 \%$ incidence, $95 \%$ confidence level and $5 \%$ absolute precision, the minimum sample size required in each strata ${ }^{1}$ is $384 .^{2}$ This derivation assumes that the population proportion is normally distributed. On the other hand, a sample size of 384 would imply a relative precision of $10 \%$. If we were to require a $5 \%$ relative precision, the sample size would increase to $1600 .{ }^{3}$ Note that all the sample size calculations require estimates of the incidence in the population. In our case, we can get an estimate of the incidence from previous ASER surveys. However, incidence varies across different indicators - so incidence of reading ability is different from incidence of dropouts. In addition, we often want to measure things that are not binary for which we need more observations.
Given these considerations, the sample size was decided to be 600 households in each district. ${ }^{4}$ Note that at the state level and at the all India level the survey has many more observations lending estimates at those levels much higher levels of precision.

ASER has a two-stage sample design. ${ }^{5}$ In the first stage, 30 villages are randomly selected using the village directory of the 2001 census as the sample frame. ${ }^{77}$ Therefore, the coverage of ASER is the population of rural India. ${ }^{8}$ In the second stage 20 households are randomly selected in each of the 30 selected villages in the first stage.

Villages are selected using the probability proportional to size (PPS) sampling method. This method allows villages with larger populations to have a higher chance of being selected in the sample. It is most useful when the sampling units vary considerably in size because it assures that those in larger sites have the same probability of getting into the sample as those in smaller sites, and vice verse. ${ }^{10}$

[^78]In each selected village, 20 households are surveyed. Ideally, a complete house list of the selected village should be made and 20 households selected randomly from it. However, given time and resource constraints a procedure for selecting households is adopted that preserves randomness as much as possible. Field investigators are asked to divide the village into four parts. This is done because villages often consist of hamlets and a procedure that randomly selects households from some central location may miss out households in the periphery of the village. In each of the four parts, investigators are asked to start at a central location and pick every $5^{\text {th }}$ household in a circular fashion until 5 households have been selected. In each selected household, all children in the age group of 5-16 are tested.

The survey provides estimates at the district, state and national levels. In order to aggregate estimates up from the district level, households have to be assigned weights, also called inflation factors. The inflation factor corresponding to a particular household denotes the number of households that the sampled household represents in the population. Given that 600 households are sampled in each district regardless of the size of the district, a household in a larger district will represent many more households and, therefore, have a larger weight associated with it than one in a sparsely populated district.

The advantage of using PPS sampling is that the sample is self-weighting at the district level. In other words, in each district the weight assigned to each of the sampled households turns out to be the same. This is because the inflation factor associated with a household is simply the inverse of the probability of it being selected into the sample times the number of households in the sample. Since PPS sampling ensures that all households have an equal chance of being selected at the district level, the weights associated with households within a district are the same. ${ }^{11}$ Therefore, weighted estimates are exactly the same as the un-weighted estimates at the district level. However, to get estimates at the state and national levels, weighted estimates are needed since states have a different number of districts and districts vary by population.
Even though the purpose of the survey is to estimate learning levels among children, the household was chosen as the second-stage sampling unit. This has a number of advantages. First, children are tested at home rather than at school, allowing all children to be tested rather than just those in school. Further, testing children in school might create a bias since teachers may encourage testing the brighter children in class. Second, a household sample generates an age distribution of children that can be cross-checked with other data sources, like the census and the NSS. Third, a household sample makes calculation of the inflation factors easier since the population of children is no longer needed.

Often household surveys are stratified on various parameters of interest. The reason for stratification is to get enough observations on entities that have the characteristic that is being studied. The ASER survey stratifies the sample by population in the first stage. No stratification is possible at the second stage. In order to stratify on households with children in the 3-16 age group, in the second stage, we would need the population of such households in the village, which is not possible without a complete house list of the village.

[^79]
# Annual Status of Education Report (ASER) and National Achievement Surveys (NAS): A Comparison 

Currently two large-scale nationwide learning assessments are conducted in India at the elementary stage. Pratham/ASER Centre's Annual Status of Education Report (ASER) has been brought out annually since 2005. The National Council of Educational Research and Training (NCERT) has conducted National Achievement Surveys (NAS) periodically since 2001 for Classes III, V and VIII. ${ }^{1}$ These two sources are frequently cited in discussions of learning outcomes in India. However, the two assessments are designed for different purposes and employ different methodologies. This note describes and compares these methodologies so that informed conclusions can be reached. The note is based on ASER 2006-2014 and the NAS reports available for different time periods for Classes III, V and VIII. ${ }^{2}$

## Implementing institution

ASER is facilitated by Pratham, a non-governmental organisation, and carried out by partner institutions in almost all rural districts of the country. These partner institutions may be universities, colleges, NGOs, or other types of formal or informal organisations.
NAS is carried out by NCERT under the mandate of the Government of India's flagship programme for elementary education, Sarva Shiksha Abhiyan, to "monitor improvement in children's learning levels and to periodically assess the health of the government education system as a whole". ${ }^{3}$

## Objectives

The ASER survey is designed to generate district, state, and national level estimates of children's schooling status for all children aged 3-16, and estimates of basic ability in reading and arithmetic for all children aged 5-16. It is designed as a household-based survey so as to include all children: those enrolled in government schools, private schools, other types of schools, and those not enrolled in school. ASER aims to assess whether children have attained basic reading and arithmetic skills.

The purpose of the NAS surveys, according to NAS documents, is to "obtain an overall picture of what students in specific classes know and can do and to use these findings to identify gaps and diagnose areas that need improvement." NAS is therefore designed as a school-based survey of students enrolled in Classes III, V and VIII in government and government-aided schools. It is a grade level assessment, intended to assess children's learning outcomes relative to the curriculum for their class.

## Sampling and coverage

ASER's objective is to reach all rural districts each year. It is a nationwide sample-based household survey. It employs a two-stage sample design. At the first stage, 30 villages are selected in each rural district from the Census 2001 directory using Probability Proportional to Size (PPS). In the second stage, 20 households are randomly selected in each village. All children aged 3-16 in sampled households are surveyed. All children aged 5-16 are assessed.

ASER 2014 reached 341,070 households in 577 rural districts. 569,229 children aged 3-16 were surveyed, of which 408,074 children aged 5-16 were assessed on the ASER Reading tool and 407,706 children aged 5-16 were assessed on the ASER Arithmetic tool.

[^80]NAS aims to cover all 35 states and union territories. It is a national survey that is school-based and focused on specific classes in particular years. NAS employs a three-stage cluster design. In the first stage, districts are selected using PPS. In the second stage, the requisite number of schools are chosen within sampled districts, again using PPS. In the third stage, students are randomly selected within sampled schools.

The most recent NAS (cycle 3) Class VIII survey was administered in 2012. The survey comprised a sample of 188,647 students and 24,486 teachers from 6,722 schools across 33 states/union territories.

NAS (cycle 3) Class V was implemented from 2009 to 2011 in 31 states/union territories. It covered 122,543 children from 6,602 urban and rural schools. ${ }^{4}$
NAS (cycle 3) Class III was conducted in 2013 in 34 states/union territories and covered a sample of 104,374 students in 7,046 schools.

## Tools and testing

ASER assesses early reading and basic arithmetic ability, which are foundational skills fundamental to literacy and numeracy acquisition. All children aged 5-16 are administered the same tests, regardless of schooling status or age.

Early reading ability implies the acquisition of letter knowledge, ability to decode Std. I and II level words and fluently read Std. I and II level passages. ASER tools are designed to assess mastery of these foundational skills and are not intended to differentiate within each mastery level. For instance, among the group of children identified as fluent readers of Std. II level text, the ASER assessments are not designed to differentiate between their ability to read and to comprehend.

The highest level tested in reading is a Std. II level text. The highest level tested in arithmetic is a 3-digit by 1-digit division problem, usually taught in Std. III or IV.

All ASER tools and testing procedures are available in the public domain.
NAS assesses grade level competencies. Therefore, children are administered different tests depending on the class in which they are studying. All cycle 3 surveys have used Item Response Theory (IRT).
The NAS (cycle 3) Class VIII achievement tests were developed in four subjects (language, mathematics, science and social science). The Class VIII test forms are based on common core content and competencies identified from an analysis of state textbooks.

Similar work was done for the development of the tools used in NAS Class $V$ (cycle 3). The Class $V$ survey included language (including reading comprehension), mathematics and environment science. Tools, testing procedures, and grading rubrics for the writing task are not in the public domain.
NAS (cycle 3) Class III survey assessed two subjects - language (listening, recognition of words and reading comprehension) and mathematics (numbers, basic operations, measurement, data handling, patterns, money and geometry).

## Test administration

ASER is a household survey. ASER reading and arithmetic assessments are administered one on one in an oral format. Children are tested at home. All children age 5-16 are given the same test, regardless of schooling status, age, or grade.

NAS is conducted in school (government and government aided schools). ${ }^{5}$ Children of different classes are given different tests. For example, NAS tests (cycle 3) for class V and class VIII are pen-and-paper tests administered to a group of students in school. The cover of the test booklet has instructions for students indicating how to record or modify their responses. In addition to pen-and-paper tests, the NAS (cycle 3) Class III survey had listening comprehension items in which children marked multiple choice answers based on a passage read aloud by the investigator.

## Process implementation and monitoring

ASER is conducted each year by surveyors from partner organisations in each district. These include District Institutes of Education and Training (DIETs), teacher training colleges, universities, NGOs and others. ${ }^{6}$ Surveyors receive an intensive 2-3 day training in preparation for the survey, including a day of practice in the field. ASER devotes considerable time and effort to ensuring data quality through carefully designed and implemented training, monitoring, and desk and field recheck procedures, details of which are provided in each year's report and on the ASER Centre website. External process audits of the ASER field work and data collection process are also conducted periodically.

NAS is coordinated by NCERT with the support of state agencies such as SCERTs/State Institutes of Education (SIEs) in the states and union territories. All coordinators at state and district level are trained on field level data collection. A detailed guideline cum training manual was developed by Education Survey Department (ESD). In each selected district, a team of two field investigators is appointed by the district coordinators. They are given rigorous training on selection of students in the sampled schools, administration of tools and recording of responses by students in OMR sheets. It is not clear whether field practice is included as part of the training of field investigators.

Monitoring guidelines are laid out by NCERT for NAS. Monitoring at all levels is expected from supervisors. For example for the NAS (cycle 3) Class III survey, 5-10 schools were to be monitored in each district. After data collection, OMR sheets, tests, questionnaires and field notes etc. were verified at the district level for correctness of numbers, codes and other information, and then sent to the state coordinators. The response sheets in OMR format were then dispatched by the state coordinators to the respective Regional Institutes of Education (RIEs) or NCERT for scanning, scoring and analysis.

## Accuracy of estimates

ASER estimates are self-weighting at the district level. At the state and national levels, estimates are weighted by the appropriate population weights. ASER does not report standard errors and margins of error for its state and national estimates. However, a study done on the precision of ASER learning and enrollment estimates shows that margins of error are well within $5 \%$ at the state level. In addition, a detailed check of sample sizes is done for smaller states where sample sizes can be small for some sub-populations. Where the number of observations in the sample is found to be insufficient, estimates are not presented in the report. Since 2011 ASER reports also present estimates at divisional level, along with the associated standard errors and margins of error.

NAS (cycle 3) surveys are based on more sophisticated technical work than previous surveys. While this cycle of surveys can be compared to future student achievement surveys, the NAS documents clearly state that due to technical difficulties the results from this cycle cannot be compared with previous rounds. Standard errors are provided for the NAS estimates.

[^81]
## Availability of results

ASER findings are made available in the same school year that the fieldwork is conducted. The survey is conducted between September and November of each year and the report is published the following January. District, divisional, state, and national level estimates are in the public domain.

NAS (cycle 3) Class VIII data collection was done in 2012 and the report was released in 2014. The Class V fieldwork was conducted between November 2010 and March 2011, and report was released in July 2012. These reports are available on the NCERT website. NAS (cycle 3) Class III survey was conducted in 2013 and the report was released in 2014.

## Test reliability and validity

ASER testing tools assess achievement of mastery rather than the performance of children relative to their peers. Reliability in this case refers to the consistency of the decision-making process in assigning children to a mastery level across repeated administrations of the test. In addition, since examiners assign each child to a mastery level, it is important to also estimate the consistency of the decision-making process across examiners, which in technical terms is referred to as inter-rater reliability. A series of studies indicates substantial reliability of decisions across repeated measurements (test-retest) and satisfactory inter-rater reliability.

The validity of the ASER reading test (that is, whether the test actually measures the constructs it is intended to measure) was examined using the Fluency Battery as a criterion measure for estimating the validity of the ASER Hindi language tool. The Fluency Battery is a test of early reading ability adapted from the Early Grade Reading Assessment (USAID, 2009) and the Dynamic Indicators of Basic Early Literacy Skills (University of Oregon Center on Teaching and Learning, 2002). The ASER language assessment is strongly associated with the Fluency Battery. The magnitude of the correlation coefficients range from . 90 to .94 (a correlation coefficient of 1 indexes a perfect and positive association between two measures). ${ }^{7}$

NAS (cycle 3) has used much more sophisticated techniques than those used in previous cycles. The Class $V$ reports reliability coefficients for all three subjects. Class VIII report also indicates that the reliability of the test score scales was estimated from the IRT scaling.

## Comparisons over time

ASER has used the same sampling procedures since 2006. The reading assessment tool has not changed since the first survey in 2005, and the math tool has not changed since 2007. Therefore all estimates generated since 2007 are comparable.

In the latest cycle - NAS (Cycle 3) Class III, Class V and Class VIII reports use item response theory (IRT) to analyse the data, unlike earlier two cycles of the survey which used classical test theory (CTT). NAS reports point out that the results of the most recent cycle are therefore not comparable with those of earlier years. ${ }^{8}$

## Conclusions

Although both ASER and NAS are large scale assessments of learning, they are not designed for the same purpose. Therefore, as described in this note, they are very different in terms of sampling, test design and content, methodology of assessment and time frame. Equally importantly, the assessment results are computed very differently. Since estimates generated by these assessments neither cover the same populations nor assess the same content, their results are not comparable.

[^9]:    ${ }^{1}$ Fellow at Centre for Policy Research (CPR), New Delhi and Senior Researcher, Accountability Initiative, Centre for Policy Research, New Delhi. A modified version was earlier published on the webpage of Accountability Initiative and Ideas for India.
    ${ }^{2}$ Our approach is similar to that used by French and Gandhi-Kingdon (2010). In technical terms, this approach is referred to as household fixed effects. The complete paper is available at http://www.accountabilityindia.in/article/working-paper/2735-impact-private-tutoring-learning-levels-evidence-india
    ${ }^{3}$ We have also accounted for age and gender of the child, grade in which the child is studying, and type of school (government or private) attended, in the analysis. Factoring in gender implies that gender differentials between children in a household (say, if the parents focus more on the education of the male child) cannot explain the effect of tuition. Factoring in school type captures the fact that parents might enrol more 'studious' or 'motivated' or 'intelligent' children in private schools. Hence, unobservable factors such as motivation are captured to some extent; yet, the possibility of bias can't be ruled out.

[^10]:    ${ }^{4}$ For details, refer to the ASER reports

    ${ }^{2}$ By basic comprehension, we refer to the ability to answer fact retrieval questions based on a text. ASER cannot test higher level comprehension because the nature of the text does not lend itself to questions assessing higher level comprehension.
    ${ }^{3}$ By basic problem solving we refer to the ability to understand a simple word problem in math and solve it.
    ${ }^{4}$ As with basic ASER reading assessment, the 'bonus' tasks are administered in the local language.

[^14]:    ${ }^{1}$ Director, ASER Centre, New Delhi
    ${ }^{2}$ See state report cards from the District Information System for Education (DISE) for different years, available at www.dise.in. The numbers vary considerably from state to state. During the period 2004-05 to 2013-14, enrolment in Std. VIII increased from 1.46 million to 1.93 million in Maharashtra and from 1.10 to 1.24 million in Tamil Nadu. But in states such as Bihar and Rajasthan, the increase was massive. During the same period, Std. VIII enrolment increased from 0.53 million to 1.93 million in Bihar and from 0.82 million to 1.26 million in Rajasthan.
    ${ }^{3}$ Using DISE data to construct artificial cohorts for all India numbers, we can see that in 2005-06, there were 21.
    3 million children in Std. V. In 2008-09, the size of the cohort in Std. VIII was 15.1 million (a "survival" rate of $71 \%$ ). The same exercise for the cohort that moved from Std. V in 2010-11 (24.7 million) to Std. VIII in 2013-14 (21.4 million) shows a "survival" rate of $87 \%$.
    ${ }^{4}$ The ASER figures for girls in the age group 15-16 who are currently not enrolled in school has dropped from 22.6\% (ASER 2006) to 17.3\% (ASER 2014).
    ${ }^{5}$ In several other ongoing studies being conducted by ASER Centre focused on middle and secondary schools, we find that there is a section of children who cannot read fluently and hence have difficulty doing pen and paper tests. These studies are being carried out in Nalanda in Bihar, Satara in Maharashtra, Hardoi in UP and in Sambalpur in Odisha. More details are available on asercentre.org.

[^15]:    ${ }^{6}$ Economists Lant Pritchett and Karthik Muralidharan have made this point using data from their studies as well.
    7 National Achievement Survey (Cycle 3) Std VIII report indicates that in reading comprehension, children did better on the "locate information" tasks as compared to the tasks that involved interpreting, inferring or evaluating. In math, data handling questions were easier to do than those which involved ratios, proportions or mensuration. Several studies done by ASER Centre/Pratham (www.asercentre.org) and Educational Initiatives come to very similar conclusions. See http://www.ei-india.com/lsa-projects/.
    ${ }^{8}$ According to the National Commission for Enterprises in the Unorganized Sector, "the total employment in the Indian economy in 2004-05 was 456 million of which 393.2 million was in the informal sector. Of these unorganized sector workers, agriculture accounted for 251.7 million and the rest 141.5 million are in the non-agricultural sector." See http://nceuis.nic.in/Challege_in_Employment_in_Development_in\%20India.pdf

[^16]:    "Pratham is one of the largest non-governmental organisations working in education in India. Pratham's mission is "every child in school and learning well". ASER Centre (the organisation that facilitates the ASER survey) is the autonomous research and assessment unit of Pratham.
    ${ }^{2}$ Many impact evaluations have been carried out on the effectiveness of Pratham's instructional programs. See the website of J-PAL (Abdul Latif Jameel Poverty Action Lab) for details.

[^18]:    ${ }^{6}$ Typically this is how assessments of early reading ability are administered, e.g. the Early Grade Reading Assessment (USAID) and the Dynamic Indicators of Basic Literacy Skills (DIBELS, University of Oregon Center on Teaching and Learning).
    ${ }^{7}$ To solve numerical problems in the arithmetic tool, the child can use paper and pencil.
    ${ }^{8}$ The education system in India is embedded in India's federal system of government with centre, states and local governments each having specific roles and responsibilities. Typically the central government makes the overarching law or policy framework, and states are responsible for framing and implementing specific rules, systems and procedures within this framework.
    ${ }^{9}$ As in many other countries, India has a National Curriculum Framework for elementary education. State governments develop textbooks based on the guidelines laid down in the National Curriculum Framework. Currently, there are examinations at Grade 10 and Grade 12 levels in India, although the Grade 10 exam is becoming optional in many states. These examinations influence teaching and learning practices in lower grades as well. All schools are affiliated to specific examination 'boards'. These can be national boards (the Central Board of Secondary Education and the Indian Certificate of Secondary Education being the main national boards) or state boards. Most schools are affiliated to state examination boards. Each school system uses the textbooks that are mandated for the board that they are affiliated to.
    ${ }^{10}$ For ASER 2014, tools were prepared and administered in 19 languages including English.

[^19]:    ${ }^{11}$ Recent government statistics indicate that about 2\% children go to unrecognised schools.

[^20]:    * ASER Centre hires Master Trainers in each district for the entire survey period. Two Master Trainers are responsible for the successful execution of the complete survey in each district, including quality control processes.
    ${ }^{* *}$ Rechecks are conducted in the surveyed villages to ensure that the survey was conducted properly.

[^21]:    ${ }^{1}$ previously known as the National Sample Survey Organisation.
    ${ }^{2}$ In comparison, the third round of the National Family Health Survey done in 2005-06 sampled 50,236 rural households and the India Human Development Survey done in 2005-06 sampled 26,734 rural households.
    ${ }^{3}$ ASER district level estimates for each year are available on the ASER Centre website (www.asercentre.org). Estimates are also produced at the divisional level (a division is a group of districts within a state, thus divisional estimates are at a level of aggregation between district and state level). Divisional estimates are published in the ASER report.

[^22]:    ${ }^{4}$ From Census 2011, the village directory with block identifiers and household population is not yet in the public domain.

[^23]:    ${ }^{5}$ www.asercentre.org/p/64.html
    ${ }^{6}$ There is a test development framework document that is available on request.
    ${ }^{7}$ Secondary forms of letters and conjoint letters are not usually part of the Grade 1 curriculum in most states and hence are not assessed in the ASER reading test.
    ${ }^{8}$ The type-token ratio indexes the lexical diversity of a text. It is calculated by obtaining a ratio of the total number of unique words in the text (types) to the total number of words in the text (tokens). A higher type-token ratio indexes greater lexical diversity, which is important in the measurement of fluency, as children who read passages with many repetitive words (lower type-token ratio) are likely to have an easier time and read faster than children who read passages that are more lexically diverse (higher type-token ratio) and who have to decode a greater number of different words in the passage.
    ${ }^{9}$ Three digit by one digit numerical division is expected of children in Grade 3 in some states and Grade 4 in other states.

[^24]:    ${ }^{10}$ For example the Early Grade Reading Assessment (EGRA) and the Dynamic Indicators of Basic Literacy Skills (DIBELS, developed by the University of Oregon Center on Teaching and Learning).
    ${ }^{11}$ However, children are given a paper and pencil to solve the subtraction and division problems in the arithmetic assessment.
    ${ }^{12}$ In ASER 2013, for example, $76 \%$ of all children tested were in Grade 3 or higher.

[^25]:    ${ }^{213}$ The full paper is available at http://www.asercentre.org/p/113.htm
    ${ }^{14}$ The main findings from the study of validity of the ASER assessments are summarised here: For reading, there was a very strong association between children's performance on the ASER reading assessment and the concurrently administered assessment of early reading ability modelled on the Early Grade Reading Assessment (EGRA). EGRA is a timed assessment of fluency in reading letters, words, and passages and its score notes the total number of letters or words read correctly in a minute. While the ASER is a short test requiring children to read 5 letters or 5 words at the letter and word level respectively, the EGRA comprises 52 letters and 52 words on the Letter and Word Reading Fluency subtests respectively. Despite these differences in test length, administration, and scoring procedures, a high level of consistency was noted across the ASER reading assessment and the EGRA in classifying children at the 'nothing', 'letter', and 'word' level. For instance, children who were categorised at the 'letter' level were more likely to correctly identify 4 or more letters on the EGRA. In addition, fluency rates of children classified at the 'letter' level were found to be lower than the fluency rates of children classified at the 'word' or higher levels. The ASER arithmetic assessment was also found to be (a) strongly correlated with the paper-and-pencil mathematic assessment used in this evaluation and (b) more closely correlated with the paper-and-pencil mathematic assessment than with the assessments of literacy. These findings provide favourable evidence for validity.

[^74]:    ${ }^{1}$ Villages are chosen from the 2001 Census Directory using PPS (Probability Proportional to Size) sampling.
    ${ }^{2}$ Ramaswami, Bharat and Wadhwa, Wilima (2009), "Survey Design and Precision of ASER Estimates", mimeo.
    ${ }^{3}$ United Nations (2005), Designing Household Survey Samples: Practical Guidelines, Studies in Methods, Series F No. 98, Department of Economic and Social Affairs, Statistics Division.

[^75]:    ${ }^{4}$ For instance, NSS surveys are not representative at the district level. However, they are representative for NSS regions, which are formed using agro-climatic criteria.
    ${ }^{5}$ We decided to use the state administrative divisions, rather than the NSS regions, since state divisions are more commonly used within the state.
    ${ }^{6}$ The district composition was obtained from the state websites. See the section on Divisional Estimates in this report for the exact composition.
    ${ }^{7}$ See the state pages on Divisional Estimates in this report for the exact composition.

[^76]:    ${ }^{8}$ Often sample sizes are also larger for Std I-II, which would also result in low margins of error.

[^77]:    Data for Jammu and Kashmir for 2010 is not available.

[^78]:    ${ }^{1}$ Stratification is discussed below.
    ${ }^{2}$ The sample size with absolute precision is given by $\frac{z^{2} p q}{d^{2}}$ where $z$ is the standard normal deviate corresponding to $95 \%$ probability ( $=1.96$ ), $p$ is the incidence in the population (0.5), $q=(1-p)$ and $d$ is the degree of precision required (0.05).
    ${ }^{3}$ The sample size with relative precision is given by $\frac{z^{2} q}{r^{2} p}$ where $z$ is the standard normal deviate corresponding to $95 \%$ probability ( $=1.96$ ), $p$ is the incidence in the population (0.5), $q=(1-p)$ and $r$ is the degree of relative precision required (0.1).
    ${ }^{4}$ Sample size calculations assume simple random sampling. However, simple random sampling is unlikely to be the method of choice in an actual field survey. Therefore, often a "design effect" is added to the sample size. A design effect of 2 would double the sample size. At the district level a $7 \%$ precision along with a $95 \%$ confidence level would imply a sample size of 196, giving us a design effect of approximately three. However, note that a sample size of 600 households gives us approximately 1000-1200 children per district.
    ${ }^{5}$ For a two stage sample design, as explained above, sample size calculations have to take into account the design effect, which is the increase in variance of estimates due to departure from simple random sampling. This design effect is a function of the intra-cluster correlation. The greater this correlation, the larger the design effect implying a larger sample size for a given level of precision. For a given margin of error (me), the sample size can be backed out
    from $m_{m e}=\frac{2 \sigma}{2}=\sqrt[2]{\frac{d p(1-p)}{N-1}}$ where d is the design effect, p is the incidence in the population, s its standard error and N the sample size.
    ${ }^{6}$ Of these 30 villages, 10 are from ASER 2012, 10 from ASER 2013 and 10 are newly selected in 2014. They were selected randomly from the same sample frame. The 10 new villages are picked as an independent sample.
    ${ }^{7}$ Since the sampling frame is more than 10 years old sometimes sampled villages need to be replaced. As far as possible, however, villages are not replaced. There are three main reasons for replacing a village: first, if it has been converted to an urban municipality; second, due to natural disasters like floods; or third, due to insurgency problems. Replacement villages are also drawn as an independent sample.
    ${ }^{8}$ No adjustments are made to the population as given in the Census 2001.
    ${ }^{9}$ Probability proportional to size (PPS) is a sampling technique in which the probability of selecting a sampling unit (village, in our case) is proportional to the size of its population. The method works as follows: First, the cumulative population by village is calculated. Second, the total household population of the district is divided by the number of sampling units (villages) to get the sampling interval (SI). Third, a random number between 1 and the SI is chosen. This is referred to as the random start (RS). The RS denotes the site of the first village to be selected from the cumulated population. Fourth, the following series of numbers is formed: RS; RS+SI; RS+2SI; RS+3SI; ... The villages selected are those for which the cumulative population contains the numbers in the series.
    ${ }^{10}$ Most large household surveys in India, like the National Sample Survey and the National Family Health Survey also use this two stage design and use PPS to select villages in the first stage.

[^79]:    ${ }^{11}$ The probability that household $j$ gets selected in village $i\left(p_{i j}\right)$ is the product of the probability that village $i$ gets selected ( $p_{i}$ ) and the probability that household j gets selected ( $\mathrm{p}_{\mathrm{j}(\mathrm{i})}$ ). This is given by:
    $p_{i j}=p_{i} p_{j(i)}=\frac{30 \text { vpop }_{i}}{d p o p} \frac{20}{v p o p_{i}}=\frac{600}{d p o p}$, where vpop ${ }_{\mathrm{i}}$ is the household population of village i and dpop is the number of households in the district. Therefore, the weight associated with each sampled household within a district is the same and is the inverse of the probability of selection.

[^80]:    ${ }^{1}$ The following NAS assessments have been carried out so far:
    Cycle 1: Class V (2001-02), Class VIII (2002-03) and Class III (2003-04)
    Cycle 2: Class V (2005-06), Class VIII (2007-08) and Class III (2007-08)
    Cycle 3: Class V (2009-11), Class VIII (2010-13) and Class III (2012-13). Source (NCERT).
    ${ }^{2}$ Much of the NAS information in this note is based on documents available on the MHRD website under National Achievement Surveys. See http:// ssa.nic.in/page_portletlinks?foldername=NAS. For more detailed comparisons of NAS, ASER and other assessments see Oza and Bethell (2013), Assessing Learning Outcomes: Policies, Progress and Challenges. Sarva Shiksha Abhiyan. DFID, New Delhi.
    ${ }^{3}$ NCERT, Education Survey Division. National Achievement Survey (Cycle 3) Class III: Achievement Highlights 2014, p. 1

[^81]:    ${ }^{5}$ Although the issue of children's attendance is not explicitly addressed in NAS documentation, the NAS-Class $V$ report states that within each school, children were selected from class registers using simple random sampling, implemented via a lottery (p.177). This seems to imply that only children present in the school on the day of the test were included.
    ${ }^{6} 243$ DIETs from 12 states participated in the ASER 2014 survey.

[^82]:    See papers by Shaher Banu Vagh (2009 and 2013). Available at http://www.asercentre.org/sampling/precision/reliability/validity/p/180.html
    ${ }^{8}$ See Oza and Bethell (2013). This document cites other technical studies that indicate that comparisons between previous surveys could not be done due to technical difficulty. This issue was also discussed and accepted in the Joint Review Mission of SSA in 2009.
